The Planetary Clock Paul Giles, 2021-02-11 The theme of The Planetary Clock is the representation of time in postmodern culture and the way temporality as a global phenomenon manifests itself differently across an antipodean axis To trace postmodernism in an expansive spatial and temporal arc from its formal experimentation in the 1960s to environmental concerns in the twenty first century is to describe a richer and more complex version of this cultural phenomenon Exploring different scales of time from a Southern Hemisphere perspective with a special emphasis on issues of Indigeneity and the Anthropocene The

Planetary Clock offers a wide ranging revisionist account of postmodernism reinterpreting literature film music and visual art of the post 1960 period within a planetary framework By bringing the culture of Australia and New Zealand into dialogue with other Western narratives it suggests how an antipodean impulse involving the transposition of the world into different spatial and temporal dimensions has long been an integral if generally occluded aspect of postmodernism Taking its title from a Florentine clock designed in 1510 to measure worldly time alongside the rotation of the planets The Planetary Clock ranges across well known American postmodernists John Barth Toni Morrison to more recent science fiction writers Octavia Butler Richard Powers while bringing the US tradition into juxtaposition with both its English Philip Larkin Ian McEwan and Australian Les Murray Alexis Wright counterparts By aligning cultural postmodernism with music Messiaen Ligeti Birtwistle the visual arts Hockney Blackman Fiona Hall and cinema Rohmer Haneke Tarantino this volume enlarges our understanding of global postmodernism for the twenty first century *Hoax* Brian Stelter,2020-08-25 The instant New York Times

**History of Computing: Learning from the Past** Arthur Tatnall,2010-08-13

History of Computing Learning from the Past Why is the history of computing important Given that the computer as we now know it came into existence less than 70 years ago it might seem a little odd to some people that we are concerned with its history Isn't history about old things Computing of course goes back much further than 70 years with many earlier vices rightly being known as computers and their history is of course important It is only the history of electronic digital computers that is relatively recent History is often justified by use of a quote from George Santayana who famously said that Those who cannot remember the past are condemned to repeat it It is arguable whether there are particular mistakes in the history of computing that we should avoid in the future but there is some circularity in this question as the only way we will know the answer to this is to study our history This book contains papers on a wide range of topics relating to the history of computing written both by historians and also by those who were involved in creating this history The papers are the result of an international conference on the History of Computing that was held as a part of the IFIP World Computer Congress in Brisbane in September 2010
