Higgs, Supersymmetry and Dark Matter After Run I of the LHC Béranger Dumont, 2016-09-21 This work was nominated as an outstanding PhD thesis by the LPSC Universit Grenoble Alpes France The LHC Run 1 was a milestone in particle physics leading to the discovery of the Higgs boson the last missing piece of the so called Standard Model SM and to important constraints on new physics which challenge popular theories like weak scale supersymmetry This thesis provides a detailed account of the legacy of the LHC Run 1 regarding these aspects First the SM and the need for its extension are presented in a concise yet revealing way Subsequently the impact of the LHC Higgs results on scenarios of new physics is assessed in detail including a careful discussion of the relevant uncertainties Two approaches are considered generic modifications of the Higgs couplings possibly

arising from extended Higgs sectors or higher dimensional operators and tests of specific new physics models Lastly the implications of the null results of the searches for new physics are discussed with a particular focus on supersymmetric dark matter candidates Here as well two approaches are presented the simplified models approach and recasting by event simulation This thesis stands out for its educational approach its clear language and the depth of the physics discussion The methods and tools presented offer readers essential practical tools for future research

Cancer, Radiation Therapy, and the Market Barbara Bridgman Perkins, 2017-08-16 Appraising cancer as a major medical market in the 2010s Wall Street investors placed their bets on single technology treatment facilities costing 100-300 million each Critics inside medicine called the widely publicized proton center boom crazy medicine and unsustainable public policy There was no valid evidence they claimed that proton beams were more effective than less costly alternatives But developers expected insurance to cover their centers staggeringly high costs and debts Was speculation like this new to health care Cancer Radiation Therapy and the Market shows how the radiation therapy specialty in the United States later called radiation oncology coevolved with its device industry throughout the

twentieth century Academic engineers and physicians acquired financing to develop increasingly powerful radiation devices initiated companies to manufacture the devices competitively and designed hospital and freestanding procedure units to utilize them In the process they incorporated market strategies into medical organization and practice Although palliative benefits and striking tumor reductions fueled hopes of curing cancer scientific research all too often found serious patient harm and disappointing beneficial impact on cancer survival This thoroughly documented and provocative inquiry concludes that public health policy needs to re evaluate market driven high tech medicine and build evidence based health care systems
