Cook, 2005-08-02 This comprehensive text provides upper level undergraduates and graduate students with an accessible introduction to the implementation of quantum ideas in molecular modeling exploring practical applications alongside theoretical explanations Topics include the Hartree Fock method matrix SCF equations implementation of the closed shell case introduction to molecular integrals and much more 1998 edition Symmetry in Chemistry Hans H. Jaffé, Milton Orchin, 2013-01-18 Developed in an essentially nonmathematical way this text covers symmetry elements and operations multiple symmetry operations multiplication tables and point groups group theory applications and crystal symmetry 1977 edition **Introduction to Stereochemistry** Kurt Martin Mislow, 2002-01-01 Molecular shape form and symmetry play a central role in organic chemistry and this text presents a brief introduction to the conceptual basis of stereochemistry Its focus lies in the fundamentals of structural stereochemistry rather than the dynamic aspects that are more relevant to reaction mechanisms The three part treatment deals with structure and symmetry stereoisomerism and the separation and configuration of stereoisomers The first section

reviews molecular architecture relating empirical bonding geometries to the hybridization of the central carbon atom. Students receive a nonrigorous treatment of symmetry elements and point groups with particular focus on the presence or absence of reflection symmetry. The second section classifies stereoisomers according to symmetry properties and to the nature of their barriers; it also discusses the dependence of optical activity on structure and concludes with an examination of topological isomerism. The third and final section explores the conceptual basis of asymmetric syntheses and kinetic resolutions. Each of the major sections features a series of exercises that reinforce and extend the preceding material and answers are provided. Preface to the Dover edition. Answers to Exercises. Bibliography. Experiencing Nature P. Theerman, Karen Hunger Parshall, 1997-04-30. This volume honoring the renowned historian of science Allen G. Debus explores ideas of science experiences of nature from within a historiographical tradition that Debus has done much to define. As his work shows, the sciences do not develop exclusively as a result of a progressive and inexorable logic of discovery. A wide variety of extra-scientific factors deriving from changing intellectual contexts and differing social milieus play crucial roles in the overall development of scientific thought. These essays represent case studies in a broad range of scientific settings from sixteenth-century astronomy and medicine through nineteenth-century biology and mathematics to the social sciences in the twentieth century that show the impact of both social settings and the cross-fertilization of ideas on the formation of science. Aimed at a general audience interested in the history of science, this book closes with Debus's personal perspective on the development of the field. Audience: This book will appeal especially to historians of science of chemistry and of medicine.
