**Studying Virtual Math Teams** Gerry Stahl, 2010-05-03 Studying Virtual Math Teams centers on detailed empirical studies of how students in small online groups make sense of math issues and how they solve problems by making meaning together These studies are woven together with materials that describe the online environment and pedagogical orientation as well as reflections on the theoretical implications of the findings in the studies The nature of group cognition and shared meaning making in collaborative learning is a foundational research issue in CSCL More generally the theme of sense making is a central topic in information science While many authors allude to these topics few have provided this kind of detailed analysis of the mechanisms of intersubjective meaning making This book presents a coherent research agenda that has been pursued by the author and his research group The book opens with descriptions of the project and its methodology as well as situating this research in the past and present context of the CSCL research field The core research team then presents five concrete analyses of group interactions in different phases of the Virtual Math Teams research project These chapters are followed by several studies by international collaborators discussing the group discourse the software affordances and alternative representations of the interaction all using data from the VMT project The concluding chapters address implications for the theory of group cognition and for the methodology of the learning sciences In addition to substantial introductory and concluding chapters this important new book includes analyses based upon the author s previous research thereby providing smooth continuity

and an engaging flow that follows the progression of the research The VMT project has dual goals a to provide a source of experience and data for practical and theoretical explorations of group knowledge building and b to develop an effective online environment and educational service for collaborative learning of mathematics Studying Virtual Math Teams reflects these twin orientations reviewing the intertwined aims and development of a rigorous science of small group cognition and a Web 2.0 educational math service It documents the kinds of interactional methods that small groups use to explore math issues and provides a glimpse into the potential of online interaction to promote productive math discourse

**Investigations in Number, Data, and Space**, 2008 Part of a K-5 mathematics curriculum with curriculum units for classroom use and resources for teachers the Investigations curriculum was developed at TERC formerly Technical Education Research Centers Theoretical Investigations Gerry Stahl, 2021-04-23 Computers have transformed how we think, discuss, and learn as individuals in groups within cultures and globally However, social media are problematic, fostering flaming culture wars and fake news This volume presents an alternative paradigm for computer support of group thinking, collaborative learning, and joint knowledge construction This requires expanding concepts of cognition to collectivities like collaborative groups of networked students Theoretical Investigations explores the conditions for group cognition, supplying a philosophical foundation for new models of pedagogy and methods to analyze group interaction Twenty-five self-contained investigations document progress in research on computer-supported collaborative learning CSCL both in Stahl's own research and during the first decade of the CSCL journal The volume begins with two new reflections on the vision and theory that result from this research Representing both ethnomethodological and social constructivist research paradigms, the investigations within this volume comprise a selection of seminal and influential articles and critical commentaries that contribute to an understanding of concepts and themes central to the CSCL field The book elaborates an innovative theory of group cognition and substantiates the pedagogical potential of CSCL Theoretical Investigations Philosophical Foundations of Group Cognition is essential as a graduate text for courses in educational theory, instructional design, learning, and networked technologies The investigations will also appeal to researchers and practitioners in those areas *Making a Difference: Volume I and II* Sasha A. Barab, Kenneth E. Hay, Nancy Butler Songer, Daniel T. Hickey, 2017-09-05 William Wordsworth 1770-1850 needs little introduction as the central figure in Romantic poetry and a crucial influence in the development of poetry generally This broad-ranging survey redefines the variety of his writing by showing how it incorporates contemporary concepts of language, difference, and the ways in which popular and serious literature were compared and distinguished during this period It discusses many of Wordsworth's later poems, comparing his work with that of his regional contemporaries as well as major writers such as Scott The key theme of relationship both between characters within poems and between poet and reader is explored through Wordsworth's construction of community and his use of power relationships A serious discussion of the place of sexual feeling in his writing is also included Taking Charge JoAnne

Nordling, Jo Anne Nordling, 1999      **Essays In Computer-Supported Collaborative Learning** Gerry Stahl, 2016-01-26

These essays are some of the most important papers co written with my colleagues that supplement the discussion of CSCL research in the published books These chapters take the discussion in specific directions They begin with my general reflections on the importance of CSCL as a research field situating my work on the VMT Project and my theory of group cognition within the field of CSCL They describe the VMT research project including its research approach technology pedagogy and analysis methods Mostly they discuss in some detail the findings that have emerged from the VMT Project about the nature of online interaction in that type of CSCL setting The volume concludes with reports of work in the project and future directions that were underway      **Autumn Drawings** Kelli Huffman, 2019-05-16

Seventeen year old Xo lives by herself having filed for emancipation when she was sixteen in order to escape her parents drug controlled lives A high school junior she faces constant bullying from her classmates even from Beth who is supposedly her friend She works as a waitress after school to support herself Although Xo endures flashbacks to the trauma she experienced at the hands of her parents she wants to believe she has put her troubled childhood behind her But when a figure emerges from the shadows and upends her life she soon discovers that the past is coming back to haunt her in the form of her parents dealer and his teenage son Kit one of Xo s classmates As she struggles with terrible memories she finds a possible ally in Kit even if he is one of the ones holding her captive But only time will tell whether the two of them can escape the violence of their lives and find happiness together In this novella a teenage girl living on her own deals with the consequences of her parents poor choices and finds an unlikely source of hope and happiness in her kidnapper s son      **An Introduction to Combinatorial Analysis** John
