

Chapter 6: How Cells Harvest Chemical Energy

Cellular Respiration: Aerobic Harvesting of Energy

-life requires energy

-in almost all ecosystems, energy ultimately comes from the sun

-in photosynthesis:

- Some of the energy in sunlight is captured by chloroplasts
- Atoms of carbon dioxide and water are rearranged
- And sugar and oxygen are produced

-in cellular respiration:

- Sugar is broken down to carbon dioxide and water
- And the cell captures some of the released energy to make ATP

-respiration, as it relates to breathing, and cellular respiration aren't the same

- Respiration in the breathing sense refers to an exchange of gasses
- Cellular respiration is the aerobic (oxygen-req) harvesting of energy from food molecules by cells

-cellular respiration

- Is an exergonic (energy-releasing) process that transfers energy from glucose to form ATP
- Can produce up to 32 ATP molecules for each glucose molecule
- Uses about 34% of the energy originally stored in glucose with the rest of the energy lost as heat

-your body requires a continuous supply of energy

-cellular respiration provides energy for body maintenance and voluntary activities

What others are saying about LEED Green Associate Exam Guide Part I: Finally, a comprehensive study tool for LEED GA Prep. I took the one-day Green LEED Green Associate course and walked away with a power point binder printed in very small print which was missing MUCH of the required information. Although I didn't know it at the time, I studied my little heart out and took the test only to fail it by 1 point. Turns out I did NOT study all the material I needed to in order to pass the test. I found this book, read it, marked it up, retook the test, and passed it with a 95%. Look, we all know the LEED Green Associate Exam is new and the resources for study are VERY limited. This one is the VERY best out there right now. I highly recommend it. Consultant VA Complete overview for the LEED Green Associate exam. I studied this book for about three days and passed the exam. The integration of millions and sometimes billions of transistors onto a single chip has unlocked the potential for next-generation technologies, facilitating new frontiers in computational power, miniaturization, and energy efficiency. **VLSI Systems to Silicon: A Practical Guide to Advanced Chip**

Design and Integration is intended to provide a comprehensive understanding of the core principles and practical techniques involved in modern VLSI design. With contributions from leading experts in the field, this book offers readers a holistic approach to VLSI systems, from the foundational concepts of digital logic design and circuit analysis to the intricate details of chip integration and silicon fabrication. The book is structured to serve both as a practical guide for industry professionals and as a valuable textbook for students pursuing advanced studies in VLSI design. It bridges the gap between theoretical knowledge and real-world implementation, providing in-depth insights into the design flow, integration challenges, and cutting-edge technologies that shape the development of integrated circuits today. The chapters are carefully crafted to cover key topics including CMOS technology, low power design techniques, hardware description languages, system on chip (SoC) design, and the latest trends in chip scaling and integration. By offering both theoretical concepts and hands-on design examples, this book aims to equip readers with the skills required to address the complexities of modern chip design. The journey from VLSI systems to silicon is one that demands not only a strong grasp of digital and analog circuit design but also a deep understanding of the tools and methodologies that make chip integration feasible. This guide is written with the intent to help both newcomers and seasoned engineers navigate these challenges and to inspire innovation in the ongoing evolution of VLSI technologies. We hope that this book serves as an essential resource for your learning and professional growth, enabling you to contribute to the ongoing revolution in chip design and integration.
