They can push or pull (depending if it then are the same or opposite)
- Who gave the names positive and negative to electric charges?
Ben Franklin
- Draw a picture of the 4 different electric field diagrams.

- How is distance related to electric force?
Greater distance = weaker force
- Define static electricity.
The build-up of charges on an object.
- Give an example of the 3 methods for transferring charges for static electricity.
a) Friction: Rub socks on carpet to transfer electrons to socks
b) Conduction: Electrons transfer from socks to feet, and up to your finger from direct contact
c) Induction: The electrons on your finger repel the electrons on a doorknob to make the doorknob positively charged. The electrons jump from your finger to the doorknob causing a spark.
- Explain how lightning works.
Lightning is form of static discharge. Wind rubs (friction) against clouds and makes the clouds negatively charged. Cloud induce a positive charge on the ground by repelling the electrons in the ground. Electrons from the cloud jump to the positively charged ground causing a spark (lightning).
- Why does static discharge occur?
Objects want to be neutral
- Define electric current.
The continuous flow of electric charged through a material.
- Draw an open circuit and a closed circuit. Be sure to include AND LABEL wires, a battery, and a light bulb.
