Strategic MRO Stephen L. Pearce, Richard L. MacInnes, 2003-05-16 Strategic MRO A Roadmap for Transforming Assets into Competitive Advantage combines the concepts of enterprise asset management and the associated maintenance repair and operating overhaul MRO materials supply chain It introduces the breakthrough Demand Supply

Compression DSC methodology which guides an organization's thinking and doing as it seeks performance improvement. Like Lean DSC provides a practical path forward by changing a mind frame and the way in which work is performed. Focused on achieving a future perfect and guided by meaningful principles, organizations will learn to apply compression strategies to drive out waste, time and non-value adding activities from their strategic MRO practices. Strategic MRO utilizes case studies from a wide variety of businesses to demonstrate strategic MRO practices and implementation. It can be successfully applied to any business where maximizing return on assets is critical to success. This is much more than a maintenance management or supply chain book because it encompasses both asset management and supply chain practices. Strategic MRO will transform your assets into a strategic advantage.

Maintenance Planning and Scheduling Handbook, 4th Edition () (Doc) D. D. Palmer, 2019-09-13. The industry standard resource for maintenance planning and scheduling, thoroughly revised for the latest advances. Written by a Certified Maintenance and Reliability Professional (CMRP) with more than three decades of experience, this resource provides proven planning and scheduling strategies that will take any maintenance organization to the next level of performance. The book resolves common industry frustration with planning and reduces the complexity of scheduling in addition to dealing with reactive maintenance. You will find coverage of estimating labor hours, setting the level of plan detail, creating practical weekly and daily schedules, kitting parts, and more, all designed to increase your workforce without hiring. Much of the text applies the timeless management principles of Dr. W. Edwards Deming and Dr. Peter F. Drucker. You will learn how you can do more proactive work when your hands are full of reactive work.

Concurrent planning of railway maintenance windows and train services Tomas Lidén, 2018-11-05 Efficiency in public and freight transportation systems is of great importance for a society Railways can offer high capacity and relatively low environmental impact but require that several technical systems are tuned and operate well Specifically there is a tight interdependency between infrastructure and trains The consequences are that all subsystems must be maintained and that the coordination of infrastructure activities and train operations is essential Railway infrastructure maintenance and train services should ideally be planned together but practice and research about railway scheduling has historically focused mainly on train operations and timetabling while maintenance planning has received less attention and little research have considered the joint scheduling of both types of activities Instead the traditional approach has been a sequential and iterative planning procedure where train timetabling often has precedence over infrastructure maintenance This thesis studies how maintenance windows which are regular time windows reserved for maintenance work can be dimensioned and jointly scheduled with train services in a balanced and efficient way for both maintenance contractors and train operators Mathematical methods are used with the aim of advancing the knowledge about quantitative methods for solving such coordination problems The thesis contributes with new optimization models that jointly schedule maintenance windows and train services investigates the solving efficiency of these models and studies crucial extensions of the planning problem primarily for the consideration of maintenance resources Furthermore the models are applied to verified and validated on a demanding real life problem instance The main results are that integrated and optimal scheduling of maintenance windows and train services is viable for problems of practical size and importance and that substantial maintenance cost savings can be achieved with such an integrated approach as compared to a traditional sequential planning process The thesis consists of an introduction and overview of the research followed by six papers which present

- 1 A cost benefit model for assessment of competing capacity requests at a single location
- 2 An optimization model for

integrated scheduling of both maintenance windows and train services 3 Mathematical reformulations that strengthen the optimization model 4 Extensions for handling resource considerations and cyclic schedules 5 A case study for a major single track line in Sweden and 6 A mathematical study of length restricted sequences under cyclic conditions
