1.1 Cleanliness

The compressor must be kept in a clean condition at all times. Make regular inspections for signs of damage, excessive wear and security of fittings. Ensure that any oil spillage is wiped up immediately and any residual oil cleaned from external surfaces.

1.2 Recording Pressures and Temperatures

Keep a regular daily record of the compressor operating pressure and temperature by noting the indicator readings, together with ambient air temperature, in a record book.

The readings should be taken when conditions are stable and with the compressor running on full load.

1.3 Maintenance Record

Keep a careful record of all servicing, maintenance and repair work carried out on the compressor unit. The record will form a useful reference.

1.4 Electrical Connections

Regularly check for loose connections or frayed wiring. Clean and tighten all connections and repair or replace all frayed or damaged wires and cables before starting up.

Avoid damage to electrical wiring when working on the compressor and ensure no damage will be caused by chafing or contact with hot surfaces.

1.5 Leaks

Inspect for leaks, loose pipe connections and dirt build up prior to carrying out routine maintenance.

Tighten loose connections and repair or replace damaged pipes or hoses immediately.

WARNING: RISK OF HIGH PRESSURE

Do NOT use hands to locate leaks in the system. Always use a piece of paper or card for this purpose.
