Maison à ossature bois et développement durable Yves Benoit, 2015-12-11 Le bâtiment tant un domaine aujourd'hui n'est pas négligeable d'une part et de l'autre son poids économique tant considérable agit en faveur des économies d'énergie dans le bâtiment entraînant des conséquences doublement bénéfiques dont la maison ossature bois est une illustration. On sait par exemple que diminuer l'énergie grise d'une construction limitera son impact sur l'environnement. On sait par ailleurs que le bois a de nombreux atouts puisqu'il stocke le dioxyde de carbone COD, qu'il est renouvelable et qu'il ne consomme que peu d'énergie pour être transformé en matériau de construction. Reste à diminuer l'énergie nécessaire à l'exploitation de la maison. La réglementation thermique 2012 vise notamment à réduire l'énergie que nécessitent le chauffage, l'eau chaude sanitaire et l'éclairage tandis que de nombreux labels exigeant certes des niveaux d'isolation plus importants ou une ventilation mécanique plus efficace prennent en compte d'autres éléments source d'énergie : lectroménager, matériaux biosourcés, potentiel de mobilité, etc. Quant au coût de la construction, il sera nécessairement optimisé grâce au choix du procédé de fabrication. On constatera dès lors que si l'usage de la construction consomme peu d'énergie, les charges d'exploitation sont trouvées mécaniquement réduites. Enfin pour que le développement soit véritablement durable, il ne faudra pas oublier la dimension sociale : on apprendra ainsi en quoi les trois engagements du label Eco Quartier apportent une dimension sociale à l'adoption de ces règles.

Gouvernance et développement durable : Une mise en perspective sociologique Philippe Hamman, 2019-10-31 Panorama la fois conceptuel et empirique des questions liées à la gouvernance de l'environnement et de la durabilité. Comment penser ensemble deux notions aussi complexes sinon préoccupantes que la gouvernance et le développement durable, devenues essentielles pour saisir le fonctionnement de nos sociétés ? L'ouvrage

propose une synthèse à la fois théorique et empirique d'importantes recherches conduites par l'auteur sur la problématique de la durabilité des contrats européens et nationaux sur les énergies renouvelables la mobilité et le logement durables la nature en ville ou encore la ville durable. Ancrées dans des méthodologies qualitatives et quantitatives en sciences sociales et attentives aux interdépendances croissantes entre chelles d'action publique ces études ont mobilisé des comparaisons territoriales et européennes. Tout au long des développements la réflexion sociologique est enrichie par un dialogue approfondi avec de nombreuses sources francophones et anglophones qui débouchent sur une mise en distance critique. Après avoir questionné la notion de gouvernance de la durabilité l'auteur dégage de façon originale une analyse conjointe de ses compositions concrètes hiérarchiques et non hiérarchiques. L'exemple de la gouvernance publique et urbaine. Cette mise en perspective s'appuie sur une riche bibliographie qui pourra également servir de guide au lecteur pour des recherches futures.
