Key Topics In Conservation Biology 2:

Key Topics in Conservation Biology David Macdonald, Katrina Service, 2009-03-12 This important new book addresses key topics in contemporary conservation biology. Written by an internationally renowned team of authors, *Key Topics in Conservation Biology* explores cutting edge issues in modern biodiversity conservation including controversial subjects such as rarity and prioritization, conflict between people and wildlife, the human aspect of conservation, the relevance of animal welfare and the role of nongovernment organizations. *Key Topics* also tackles the management of wildlife diseases and examines the impact of bushmeat extraction and the role of hunting in the conservationist's toolbox. Other essays explore basic tools of conservation biology such as computer modeling, conservation genetics, metapopulation processes and the ingenious use of hi-tech equipment. Each topic is explored by three top international experts assembled to bring their cross-cutting knowledge to a penetrating synthesis of the issues from both theoretical and practical perspectives. The interdisciplinary nature of biodiversity conservation is reflected throughout the book. Each essay examines the fundamental principles of the topic, the methodologies involved and crucially the human dimension. In this way, *Key Topics in Conservation Biology* embraces the issues from cutting edge ecological science to policy, environmental economics, governance, ethics and the practical issues of implementation. *Key Topics in Conservation Biology* will be a valuable resource in universities and colleges, government departments and conservation agencies. It is aimed particularly at senior undergraduate and graduate students in conservation biology and wildlife management and those taking Masters degrees in any field relevant to conservation. Conservation practitioners, policy makers and the wider general public eager to understand more about important environmental issues will also find this book invaluable.

[Key Topics in Conservation Biology 2](#) David W. Macdonald, Katherine J. Willis, 2013-02-06 Following the much acclaimed success of the first volume of *Key Topics in Conservation Biology*, this entirely new second volume addresses an innovative array of key topics in contemporary conservation biology. Written by an internationally renowned team of authors, *Key Topics in Conservation Biology 2* adds to the still topical foundations laid in the first volume published in 2007 by exploring a further 25 cutting edge issues in modern biodiversity conservation including controversial subjects such as setting conservation priorities, balancing the focus on species and ecosystems and financial mechanisms to value biodiversity and pay for its conservation. Other chapters setting the framework for conservation address the sociology and philosophy of people's relation with Nature and its impact on health and such challenging practical issues as wildlife trade and conflict between people and carnivores. As a new development, this second volume of *Key Topics* includes chapters on major ecosystems such as forests, islands and both fresh and marine waters along with case studies of the conservation of major taxa: plants, butterflies, birds and mammals. A further selection of topics consider how to safeguard the future through monitoring, reserve planning, corridors and connectivity together with approaches to reintroduction and rewilding along with managing wildlife disease. A final chapter by the editors

synthesises thinking on the relationship between biodiversity conservation and human development Each topic is explored by a team of top international experts assembled to bring their own cross cutting knowledge to a penetrating synthesis of the issues from both theoretical and practical perspectives The interdisciplinary nature of biodiversity conservation is reflected throughout the book Each essay examines the fundamental principles of the topic the methodologies involved and crucially the human dimension In this way Key Topics in Conservation Biology 2 like its sister volume Key Topics in Conservation Biology embraces issues from cutting edge ecological science to policy environmental economics governance ethics and the practical issues of implementation Key Topics in Conservation Biology 2 will like its sister volume be a valuable resource in universities and colleges government departments and conservation agencies It is aimed particularly at senior undergraduate and graduate students in conservation biology and wildlife management and wider ecological and environmental subjects and those taking Masters degrees in any field relevant to conservation and the environment Conservation practitioners policy makers and the wider general public eager to understand more about important environmental issues will also find this book invaluable

Human-Wildlife Interactions Beatrice Frank, Jenny A. Glikman, Silvio Marchini, 2019-05-02 Presents solutions to turn conflict into tolerance and coexistence with an emphasis on the human dimensions of human wildlife interactions

Coviability of Social and Ecological Systems: Reconnecting Mankind to the Biosphere in an Era of Global Change Olivier Barrière, Mohamed Behnassi, Gilbert David, Vincent Douzal, Mireille Fargette, Thérèse Libourel, Maud Loireau, Laurence Pascal, Catherine Prost, Voyner Ravana-Cañete, Frédérique Seyler, Serge Morand, 2019-03-12 This second volume is the work of more than 55 authors from 15 different disciplines and includes complex systems science which studies the viability of components and also the study of empirical situations As readers will discover the coviability of social and ecological systems is based on the contradiction between humanity which adopts finalized objectives and the biosphere which refers to a ecological functions We see how concrete situations shed light on the coviability s determinants and in this book the very nature of the coviability presented as a concept paradigm is defined in a transversal and ontological ways By adopting a systemic approach without advocating any economic dogma such as development or dichotomizing between humans and nature while emphasizing what

is relevant to humans and what is not this work neutrally contextualizes man's place in the biosphere. It offers a new mode of thinking and positioning of the ecological imperative and will appeal to all those working with social and ecological systems.

Rewilding European Landscapes Henrique M. Pereira, Laetitia M. Navarro, 2015-05-04. Some European lands have been progressively alleviated of human pressures particularly traditional agriculture in remote areas. This book proposes that this land abandonment can be seen as an opportunity to restore natural ecosystems via rewilding. We define rewilding as the passive management of ecological successions having in mind the long term goal of restoring natural ecosystem processes. The book aims at introducing the concept of rewilding to scientists, students and practitioners. The first part presents the theory of rewilding in the European context. The second part of the book directly addresses the link between rewilding, biodiversity and habitats. The third and last part is dedicated to practical aspects of the implementation of rewilding as a land management option. We believe that this book will both set the basis for future research on rewilding and help practitioners think about how rewilding can take place in areas under their management.

Conservation Education and Outreach Techniques Susan K. Jacobson, Mallory McDuff, Martha Monroe, 2015-09-03. The conservation of biological diversity depends on people's knowledge and actions. Vivid case studies from around the world illustrate techniques and describe planning, implementation and evaluation procedures enabling readers to implement their own new ideas effectively. *Conservation Education and Outreach Techniques* now in its second edition and updated throughout includes twelve chapters illustrated with numerous photographs showing education and outreach programmes in action, each incorporating an extensive bibliography. Helpful text boxes provide practical tips, guidelines and recommendations for further exploration of the chapter topics. This book will be particularly relevant to conservation scientists, resource managers, environmental educators, students and citizen activists. Feathered Entanglements Scott E. Simon, Frédéric Laugrand, 2024-10-15 As they migrated across great distances ancient humans may have used birdsong and bird sightings to find food and water in unseen territory Today attending to birds helps scientists track not only avian migration but also environmental change Birds remain our sentinels Feathered Entanglements offers a rich tapestry of human bird relations across the Indo Pacific In this era of uncontrolled industrialization we have grown increasingly disconnected from the natural world The ways in which birds feature in the daily life symbolic systems and material culture of humans from pigeon keeping on the rooftops of Amman to the rituals of Indigenous peoples in Taiwan can teach us how to live with other species amid the challenges of the Anthropocene In a time of intensifying ecological crisis we need more than ever to protect and appreciate non human lives Feathered Entanglements embraces the connection between humans birds and our shared world

Wild Solveig Bøe, Hege Charlotte Faber, Eivind Kasa, 2022-10-20 In this interdisciplinary work philosophers from different specialisms connect with the notion of the wild today and interrogate how it is mediated through the culture of the Anthropocene They make use of empirical material like specific artworks films and other cultural works related to the term wild to consider the aesthetic experience of nature focusing on the untamed the boundless the unwieldy or the unpredictable in other words aspects of nature that are mediated by culture This book maps out the wide range of ways in which we experience the wildness of nature aesthetically relating both to immediate experience as well as to experience mediated through cultural expression A variety of subjects are relevant in this context including aesthetics art history theology human geography film studies and architecture A theme that is pursued throughout the book is the wild in connection with ecology and its experience of nature as both a constructive and destructive force

Biodiversity and Education for Sustainable Development Paula Castro, Ulisses M. Azeiteiro, Paula Bacelar-Nicolau, Walter Leal Filho, Anabela Marisa Azul, 2016-05-26 This book gathers interdisciplinary reflections from researchers educators and other experts on the subject of biodiversity closer to education and learning The book also highlights its role as an added value to strategic principles for healthy ecosystems and sustainable human development It promotes critical thinking and foster practices and attitudes for Education for Sustainable Development reconciling education with principles of human behaviour and nature Readers especially find this book a timely resource in light of the Strategic Plan for Biodiversity 2011 2020 the Aichi Targets and the new EU biodiversity strategy Our life insurance our natural capital an EU biodiversity strategy to 2020 Along with the challenge of ecosystems and public health biodiversity conservation is essential for humanity s continued security and sustainability as it

touches on all aspects of people's lives **Rewilding** Nathalie Pettorelli, Sarah M. Durant, Johan T. du Toit, 2019-01-31
Through a global and interdisciplinary lens this book discusses, analyzes and summarizes the novel conservation approach of rewilding. The volume introduces key rewilding definitions and initiatives highlighting their similarities and differences. It reviews matches and mismatches between the current state of ecological knowledge and the stated aims of rewilding projects and discusses the role of human action in rewilding initiatives. Collating current scholarship, the book also considers the merits and dangers of rewilding approaches as well as the economic and socio-political realities of using rewilding as a conservation tool. Its interdisciplinary nature will appeal to a broad range of readers from primary ecologists and conservation biologists to land managers, policy makers and conservation practitioners in NGOs and government departments. Written for a scientifically literate readership of academics, researchers, students and managers, the book also acts as a key resource for advanced undergraduate and graduate courses. Himalayan Phytochemicals Sumira Jan, Nazia Abbas, 2018-04-10
Himalayan Phytochemicals: Sustainable Options for Sourcing and Developing Bioactive Compounds provides a detailed review of the important medicinal plants which have already been discovered in the Himalayan region, outlining their discovery, activity and underlying chemistry. In addition, it supports a global shift towards sustainable sourcing of natural products from delicate ecosystems. Across the world, environmental destruction and overharvesting of medicinal plants are reducing and destroying multiple important sources and potential leads before researchers have the chance to discover, explore or synthesize them effectively. By identifying this problem and discussing its impact on the Himalayan region, Himalayan Phytochemicals: Sustainable Options for Sourcing and Developing Bioactive Compounds frames the ongoing global struggle and highlights the key factors that must be considered and addressed when working with phytochemicals from endemic plant sources. Reviews both well-known and recently discovered plants of this region. Highlights methods for phytochemical extraction and analysis. Provides context to support a shift towards sustainable sourcing of natural products.

21st Century Homestead: Agroecology contains everything you need to stay up to date on organic agroecology. Ecological Restoration in International Environmental Law Anastasia Telesetsky, An Cliquet, Afshin Akhtar-Khavari, 2016-12-01
Human activities are depleting ecosystems at an unprecedented rate. In spite of nature conservation efforts worldwide, many ecosystems including those critical for human well-being have been damaged or destroyed. States and citizens need a new vision of how humans can reconnect with the natural environment. With its focus on the long-term holistic recovery of ecosystems, ecological restoration has received increasing attention in the past decade from both scientists and policymakers. Research on the implications of ecological restoration for the law and law for ecological restoration has been largely overlooked. This is the first published book to examine comprehensively the relationship between international environmental law and ecological restoration. While international environmental law (IEL) has developed significantly as a discipline over the past four decades, this book enquires

whether IEL can now assist states in making a strategic transition from not just protecting and maintaining the natural environment but also actively restoring it Arguing that states have international duties to restore this book offers reflections on the philosophical context of ecological restoration and the legal content of a duty to restore from an international law European Union law and national law perspective The book concludes with a discussion of several contemporary themes of interest to both lawyers and ecologists including the role of private actors protected areas and climate change in ecological restoration
