Macroeconomic Theory Jean-Pascal Benassy, 2011-05-12 This graduate textbook is a primer in macroeconomics It starts with essential undergraduate macroeconomics and develops in a simple and rigorous manner the central topics of modern macroeconomic theory including rational expectations growth business cycles money unemployment government policy and the macroeconomics of nonclearing markets The emphasis throughout the book is on both foundations and presenting the simplest model for each topic that will deliver the relevant answers The first two chapters recall the main workhorses of undergraduate macroeconomics the Solow Swan growth model the Keynesian IS LM model and the Phillips curve The next chapters present four fundamental building blocks of modern macroeconomics rational expectations intertemporal dynamic models nonclearing markets and imperfect competition and uncertainty Later the book deals with growth notably the Ramsey model overlapping generations and endogenous growth Chapter 10 moves to the famous real business cycles RBC which integrate in a unified framework growth and fluctuations The final chapters look at the issue of stabilization how best to guard the economy from shocks and the connections between politics and the macroeconomy To make the book self contained a mathematical appendix gives a number of simple technical results that are sufficient to follow the formal developments of the book

The Dynamic Macroeconomic Effects of Public Capital Christophe Kamps, 2004-12-22 This book analyzes the dynamic macroeconomic effects of public capital in industrialized countries The issue of whether public capital is productive has received a great deal of recent attention Yet existing empirical analyses have been limited to a small set of countries This book presents a new database that provides internationally comparable capital stock estimates for 22 OECD countries for the 1960 2001 period Building on this database the book estimates the dynamic effects of public capital using a variety of econometric methods The results suggest that public capital is productive in OECD countries on average The theoretical analysis based on a dynamic general equilibrium model shows that the effects of public capital depend crucially on the way the government chooses to finance additional spending

Big Ideas in Macroeconomics Kartik B. Athreya, 2013-12-27 An accessible description of modern macroeconomics and a defense of its policy relevance Macroeconomists have been caricatured either as credulous savants in love with the beauty of their mathematical models or as free market fundamentalists who admit no doubt as to the market's wisdom In this book Kartik Athreya draws a truer picture offering a nontechnical description of prominent ideas and models in macroeconomics and arguing for their value as interpretive tools as well as their policy relevance Athreya deliberately leaves out the technical machinery providing an essential guide to the sometimes abstract ideas that drive macroeconomists research and practical policy advice Athreya describes the main approach to macroeconomic model construction the foundational Walrasian general equilibrium framework and its modern version the Arrow Debreu McKenzie ADM model In the heart of the book Athreya shows how the Walrasian approach shapes and unifies much of modern macroeconomics He details models central to ongoing macroeconomic analyses the neoclassical and stochastic growth models the standard incomplete markets model the overlapping generations model and the standard search model Athreya's accessible primer traces the links between the views and policy advice of modern macroeconomists and their shared theoretical approach

A Requiem for the Fiscal Theory of the Price Level Mr. Roger Farmer, Pawel Zabczyk, 2019-10-11 The Fiscal Theory of the Price Level FTPL is the claim that in a popular class of theoretical models the price level is sometimes determined by fiscal policy rather than monetary policy The models where this claim has been established assume that all decisions are made by an infinitely lived representative agent We present an alternative arguably more realistic model populated by sixty two generations of people We calibrate our model to an income profile from U S data and we show that the FTPL breaks down In our model the price level and the real interest rate are indeterminate even when monetary and fiscal policy are both active Our findings challenge established views about what constitutes a good combination of fiscal and monetary policies

Imperfect Knowledge Economics Roman Frydman,Michael D. Goldberg,2023-09-26 Posing a major challenge to economic orthodoxy Imperfect Knowledge Economics asserts that exact models of purposeful human behavior are beyond the reach of economic analysis Roman Frydman and Michael Goldberg argue that the longstanding empirical failures of conventional

economic models stem from their futile efforts to make exact predictions about the consequences of rational self interested behavior Such predictions based on mechanistic models of human behavior disregard the importance of individual creativity and unforeseeable sociopolitical change Scientific though these explanations may appear they usually fail to predict how markets behave And the authors contend recent behavioral models of the market are no less mechanistic than their conventional counterparts they aim to generate exact predictions of irrational human behavior Frydman and Goldberg offer a long overdue response to the shortcomings of conventional economic models Drawing attention to the inherent limits of economists knowledge they introduce a new approach to economic analysis Imperfect Knowledge Economics IKE IKE rejects exact quantitative predictions of individual decisions and market outcomes in favor of mathematical models that generate only qualitative predictions of economic change Using the foreign exchange market as a testing ground for IKE this book sheds new light on exchange rate and risk premium movements which have confounded conventional models for decades Offering a fresh way to think about markets and representing a potential turning point in economics Imperfect Knowledge Economics will be essential reading for economists policymakers and professional investors Uneconomic Economics and the Crisis of the Model World M. Watson,2014-01-17 What has gone wrong with economics Economists now routinely devise highly sophisticated abstract models that score top marks for theoretical rigour but are clearly divorced from observable activities in the current economy This creates an uneconomic economics where models explain relationships in blackboard rather than real life markets The Writers Directory ,2013 *Economic Dynamics, second edition* John Stachurski,2022-08-16 The second edition of a rigorous and example driven introduction to topics in economic dynamics that emphasizes techniques for modeling dynamic systems This text provides an introduction to the modern theory of economic dynamics with emphasis on mathematical and computational techniques for modeling dynamic systems Written to be both rigorous and engaging the book shows how sound understanding of the underlying theory leads to effective algorithms for solving real world problems The material makes extensive use of programming examples to illustrate ideas bringing to life the abstract concepts in the text Key topics include algorithms and scientific computing simulation Markov models and dynamic programming Part I introduces fundamentals and part II covers more advanced material This second edition has been thoroughly updated drawing on recent research in the field New for the second edition Programming language agnostic presentation using pseudocode New chapter 1 covering conceptual issues concerning Markov chains such as ergodicity and stability New focus in chapter 2 on algorithms and techniques for program design and high performance computing New focus on household problems rather than optimal growth in material on dynamic programming Solutions to many exercises code and other resources available on a supplementary website *Methodological Foundations of Macroeconomics* Alessandro Vercelli,1991-09-26 This book is an investigation of the methodological and epistemological foundations of macroeconomic theory based on an examination of the theories of Keynes and Lucas It is divided into two parts In the first

Professor Vercelli discusses the methodological issues which lie behind the conflict among different schools of thought in macroeconomics equilibrium and disequilibrium risk and uncertainty rationality and causality These issues are central to the current debate not only in many branches of economics but also in other scientific disciplines The traditional point of view of science based on equilibrium stability and determinism has been increasingly challenged by a new point of view in which disequilibrium instability and uncertainty play a crucial role This the author argues is bound to put macroeconomics in a new more promising position In the second part of the book the author compares the two main alternative research programmes in macroeconomics that outlined by Keynes in his General Theory and that suggested by Lucas the leader of the new classical economists
