Alvin Connelly,1992 **SPICE Compatible Macromodels of Linear Multiport Network** Zhaoqing Liu,2015 In the past few decades complexity and operating frequency of microelectronic circuits have considerably increased and their sizes have shrunk As a result EDA simulations for complex systems have become difficult tasks for two main reasons One is that their actual physical models are sometimes impossible to obtain The other reason is that some characteristics of component are modified under high frequency operation In this case the bottleneck problem of macromodeling is to develop the accurate analytical model under high frequency environment To solve the problems for passive linear systems frequency domain S or Y parameter data can be obtained at first through measurements or full wave simulation To deal with the frequency domain measurements fitting methods Vector Fitting or Loewner Matrix method are applied to obtain the mathematical macromodel They all can handle high complexity system but generate different macromodels for the results For example VF method generates results in pole

residue approximation model and LM method generates results in state space matrices model From these macromodels above this thesis proposes several approaches to derive SPICE level simulation model or SPICE netlist when inputting measurements for fitting methods are Y parameter SPICE netlist is in format of components list resistors capacitors inductors and etc so it is convenient for EDA simulation The ideas of these approaches are based on properties of MNA equation and reactance theorem They are proven to generate accurate results and they can greatly accelerate the macromodeling process in this thesis This thesis also provides an open discussion on SPICE netlist generation from frequency domain data Within the development of new or optimized fitting methods we always can invent or optimize the corresponding macromodeling methods to better adapt characteristics of those fitting methods On the other hand the best solution for different problems or systems is not fixed Adopting the method based on the properties of the system would achieve better efficiency
