Plant Breeding Reviews, Volume 28 Jules Janick, 2007-01-02 Plant Breeding Reviews presents state of the art reviews on plant genetics and the breeding of all types of crops by both traditional means and molecular methods Many of the crops widely grown today stem from a very narrow genetic base understanding and preserving crop genetic resources is vital to the security of food systems worldwide The emphasis of the series is on methodology a fundamental understanding of crop genetics and applications to major crops It is a serial title that appears in the form of one or two volumes per year *Soils in the Humid Tropics and Monsoon Region of Indonesia* Kim H. Tan, 2008-05-28 Highlighting the vast differences in tropical climate from hot and humid to cool and arctic *Soils in the Humid Tropics and Monsoon Region of Indonesia* explores the climate soil zones and altitudinal variation in soil formation The author explores the changes in geomorphology especially in climate and vegetation above sea level that ha

Water Flow In Soils Tsuyoshi Miyazaki, 2005-07-28 The new edition of a bestseller *Water Flow in Soils* bridges the fields of soil physics where descriptions of water flow tend to be microscopic and hydrology where they tend to be macroscopic Unlike other physics laden texts this work conveys the fundamental concepts of water flow in soils with clear and essentially nonmathematical explanation *Handbook of Plant Nutrition* Allen V. Barker, David J. Pilbeam, 2015-05-14 In 2007 the first edition of *Handbook of Plant Nutrition* presented a compendium of information on the mineral nutrition of plants available at that time and became a bestseller and trusted resource Updated to reflect recent advances in knowledge of plant nutrition the second edition continues this tradition With chapters written by a new team o

Plant Growth-Promoting Microbes for Sustainable Biotic and Abiotic Stress Management Heba I. Mohamed, Hossam El-Din Saad El-Beltagi, Kamel A. Abd-El Salam, 2021-05-02. Abiotic and biotic stress factors including drought, salinity, waterlog, temperature extremes, mineral nutrients, heavy metals, plant diseases, nematodes, viruses and diseases adversely affect growth as well as yield of crop plants worldwide. Plant growth promoting microorganisms (PGPM) are receiving increasing attention from agronomists and environmentalists as candidates to develop an effective, eco-friendly and sustainable alternative to conventional agricultural e.g. chemical fertilizers and pesticide and remediation e.g. chelators, enhanced phytoremediation methods employed to deal with climate change induced stresses. Recent studies have shown that plant growth promoting bacteria (PGPB), rhizobia, arbuscular mycorrhizal fungi (AMF), cyanobacteria have great potentials in the management of various agricultural and environmental problems. This book provides current research of biofertilizers and the role of microorganisms in plant health with specific emphasis on the mitigating strategies to combat plant stresses.
