ripple tank experiment sf scientific - Feb 15 2022

web mar 7 2016 1. A ripple tank is a shallow tank of water in which waves can be studied. It consists of a tank of water, a light source, and a screen. The light source is placed above the tank, and the screen is placed below it. The light from the source passes through the water and is reflected by the screen. The pattern of light and dark regions on the screen shows the wave pattern in the tank. 2. The ripple tank is used to study the properties of waves, such as reflection, refraction, diffraction, and interference. 3. The ripple tank is also used to study the speed of waves. 4. The ripple tank is a useful tool for studying waves in a controlled environment.
