

# Chemical vs Physical Change

\_\_\_\_\_ is the science concerned with the properties, composition, and behaviour of matter.  
\_\_\_\_\_ is anything that has mass and occupies space.

\_\_\_\_\_ is the amount of matter contained in a thing. Usually the mass of common things is measured in \_\_\_\_\_ or \_\_\_\_\_.

\_\_\_\_\_ are the qualities of a thing, especially those qualities common to a group of things. The relationship between matter and its properties is a very important aspect of chemistry.

A **p**\_\_\_\_\_ property of a substance is a property that can be found without creating a new substance.

For example:

A **c**\_\_\_\_\_ property is the ability of a substance to undergo *chemical change*/\_\_\_\_\_ and change into a \_\_\_\_\_ substance.

For example:

## Physical Properties versus Chemical Properties

**Figure 2.1.2:** The wood that is burning to heat the pot is undergoing chemical changes. The boiling soup in the pot is undergoing a physical change.

The properties of matter are also classified as being either physical properties or chemical properties. Recall, **Physical properties** describe \_\_\_\_\_ which are changes of \_\_\_\_\_ or form. Physical properties also describe the physical \_\_\_\_\_ of a material.

**Chemical properties** describe chemical \_\_\_\_\_. Chemical changes are those in which a new substance(s) or species is formed (Figure 2.1.2). Chemical properties also describe the tendency of a chemical to \_\_\_\_\_.

Chemical properties describe relationships or interactions between different forms of matter.

They include a chemical's \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Most physical properties describe relationships or interactions between matter and energy.

- Hardness \_\_\_\_\_
- Malleability \_\_\_\_\_
- Ductility \_\_\_\_\_
- Lustre \_\_\_\_\_
- Viscosity \_\_\_\_\_
- Diffusion \_\_\_\_\_

For example,

A material can be classified as \_\_\_\_\_ or translucent by how it interacts with light. Other physical properties you may have learned about include density, \_\_\_\_\_, and surface tension. I

**Physical properties** describe **physical changes**.

**Chemical properties** describe interactions between different forms of matter...or **chemical change**. 2

W. P. Palmer,1996 The concept of physical and chemical change is far from being the clearest and most self explanatory concept in the world If a number of chemists are asked to define physical and chemical change there may well appear to be a fair degree of uniformity in their answers until a few examples are suggested When chemists are asked to place a variety of changes into the category of physical or chemical change then differences inevitably arise It is not difficult to demonstrate this by viewing school textbooks and articles about the topic In spite of this physical and chemical change is still taught in most in most secondary school courses The problem arises from the definition and the historical layers of meaning that have grown around the concept almost by accretion without teachers being aware of their significance The purpose of this paper is to describe the answers given by experienced educators to a questionnaire which attempted to find out what the views of science educators chemists worldwide about physical and chemical change now are Four appendixes present 1 List of Respondents 2 List of Questionnaires Returned 3 Physical and Chemical Change An Information Sheet and 4 Full Questionnaire Interview Protocol or Basis for Written Response Physical and Chemical Change [US] Stile Education,2023-06 **Physical and Chemical Change** Stile Education,2025-10-14 Updated with 2026 NSW content **Chemical Changes** Rebecca L.
