

## Engine Oil and Oil Filter

**WARNING**

Motorcycle operation with insufficient, deteriorated, or contaminated engine oil will cause accelerated wear and may result in engine or transmission seizure, accident, and injury.

**Oil Level Inspection**

- Check that the engine oil level is between the upper [A] and lower [B] levels in the gauge.

**NOTE**

- Situate the motorcycle so that it is perpendicular to the ground.
- If the motorcycle has just been used, wait several minutes for all the oil to drain down.
- If the oil has just been changed, start the engine and run it for several minutes at idle speed. This fills the oil filter with oil. Stop the engine, then wait several minutes until the oil settles.

**CAUTION**

Racing the engine before the oil reaches every part can cause engine seizure.

If the engine oil gets extremely low or if the oil pump or oil passages clog up or otherwise do not function properly, the oil pressure warning light will light. If this light stays on when the engine is running above idle speed, stop the engine immediately and find the cause.

**Engine Oil Change**

- Support the motorcycle perpendicular to the ground after warming up the engine.
  - Remove the engine drain plug [A] to drain the oil.
  - The oil in the oil filter can be drained by removing the filter (see Oil Filter Change).
  - ★ Replace the drain plug gasket [B] with a new one if it is damaged.
  - Tighten the drain plug.
- Torque - Engine Drain Plug: 29 N·m (3.0 kg·m, 21 ft·lb)
- Pour in the specified type and amount of oil.

**Engine Oil**

Grade:	SE, SF or SG class
Viscosity:	SAE 10W/40, 10W/50, 20W/40, or 20W/50
Amount:	3.4 L (when filter is not removed) 3.6 L (when filter is removed) 4.0 L (when engine is completely dry)

**Oil Filter Change**

- Drain the engine oil (see Engine Oil Change).
  - Remove:
    - Left Lower Fairing (see Frame chapter)
  - Remove the oil filter [A] with the oil filter wrench.
- Special Tool - Oil Filter Wrench: 57001-1249
