specific competencies identified by CACREP Council for Accreditation of Counseling and Related Programs **Williams Syndrome across Languages** Susanne Bartke, Julia Siegmüller, 2004-06-22 Williams Syndrome WS aka Williams Beuren Syndrome is a developmental disorder that we have known about for some forty years The cause for WS was detected only recently a micro deletion on chromosome 7 more specifically at the region of chromosome 7q11.23 The cognitive and behavioral profile in WS is characterized by a marked discrepancy between verbal and non verbal skills combined with relatively spared linguistic skills Recent research has shown considerable progress defining the areas of intactness in linguistic abilities This volume builds on that research giving an overview of the psycholinguistic research undertaken and opening up new perspectives and insights through new data and analyses This book is of interest to researchers of applied cognitive science and to linguists more occupied with theoretical research **A Compendium of Neuropsychological Tests**

Esther Strauss, Elisabeth M. S. Sherman, Otfried Spreen, 2006 This compendium gives an overview of the essential aspects of neuropsychological assessment practice It is also a source of critical reviews of major neuropsychological assessment tools for the use of the practicing clinician *Assessing Adolescent and Adult Intelligence* Alan S. Kaufman, Elizabeth O. Lichtenberger, 2005-08-05 The classic text now updated with a new interpretive approach to the WAIS III *Assessing Adolescent and Adult Intelligence* the classic text from Alan Kaufman and Elizabeth Lichtenberger has consistently provided the most comprehensive source of information on cognitive assessment of adults and adolescents The newly updated Third Edition provides important enhancements and additions that highlight the latest research and interpretive methods for the WAIS III Augmenting the traditional sequential and simultaneous WAIS III interpretive methods the authors present a new approach derived from Cattell Horn Carroll CHC theory This approach combines normative assessment performance relative to age peers with ipsative assessment performance relative to the person's own mean level Following Flanagan and Kaufman's work to develop a similar CHC approach for the WISC IV Kaufman and Lichtenberger have applied this system to the WAIS III profile of scores along with integrating recent WAIS III literature Four appendices present the new method in depth In addition to a detailed description the authors provide a blank interpretive worksheet to help examiners make the calculations and decisions needed for applying the additional steps of the new system and norms tables for the new WAIS III subtest combinations added in this approach *Assessing Adolescent and Adult Intelligence* remains the premier resource for the field covering not only the WAIS III but also the WJ III the KAIT and several brief measures of intelligence as well as laying out a relevant up to date discussion of the discipline The new theory based interpretive approach for the WAIS III makes this a vital resource for practicing psychologists as well as a comprehensive text for graduate students

Innovative Investigations of Language in Autism Spectrum Disorder Letitia Naigles, 2016-11-07 In recent decades a growing number of children have been diagnosed with autism spectrum disorder ASD a condition characterized by among other features social interaction deficits and language impairment Yet the precise nature of the disorder's impact on

language development is not well understood in part because of the language variability among children across the autism spectrum. The contributors to this volume, experts in fields ranging from communication disorders to developmental and clinical psychology to linguistics, use innovative techniques to address two broad questions: Is the variability of language development and use in children with ASD a function of the language such that some linguistic domains are more vulnerable to ASD than others? Or is the variability a function of the individual such that some characteristics predispose those with ASD to have varying levels of difficulty with language development and use? Contributors investigate these questions across linguistic levels from lexical semantics and single clause syntax to computationally complex phonology and the syntax pragmatics interface. Authors address both spoken and written domains within the wider context of language acquisition. This timely and broadly accessible volume will be of interest to a broad range of specialists including linguists, psychologists, sociologists, behavioral neurologists, and cognitive neuroscientists.

Neuropsychological Evaluation of the Child Ida Sue Baron, 2018. This updated and expanded edition retains a practical developmental and lifespan perspective for neuropsychological case formulation. Chapters cover the current status, clinical issues, and essential domains and techniques in clinical neuropsychological practice and research and include case vignettes that explicate brain-behavior relationships in youth from preschool age through adolescence with medical disease or psychological disorder.

Investigating Grammar in Autism Spectrum Disorders Anna Gavarró, Stephanie Durrleman, 2018-08-21. Autism Spectrum Disorder (ASD) hereafter is a neurodevelopmental condition characterized by deficits in communicative and social skills. The vast majority of research on language in ASD has focused on pragmatic difficulties while less is known about structural aspects of language in this population. Work on syntax and phonology is not only sparse but the heterogeneity in these grammatical domains has moreover led to conflicting reports that they are either intact or impaired. More remains to be understood about variations in grammatical profiles in ASD as well as the relation of grammar to other cognitive abilities. The body of research gathered here increases our understanding of the grammatical strengths and weaknesses in ASD. The contributions carefully elucidate the relations between grammar and other areas of cognition as well as unveil the similarities and differences of grammar in ASD compared to other conditions. The result is a volume that provides new ways to think about language and communication in ASD and beyond which should be of interest to both linguists and clinicians.

Speech and Audio Coding for Wireless and Network Applications Bishnu S. Atal, Vladimir Cupperman, Allen Gersho, 2012-12-06. *Speech and Audio Coding for Wireless and Network Applications* contains 34 chapters loosely grouped into six topical areas. The chapters in this volume reflect the progress and present the state of the art in low bit rate speech coding primarily at bit rates from 2.4 kbit/s to 16 kbit/s. Together they represent important contributions from leading researchers in the speech coding community. *Speech and Audio Coding for Wireless and Network Applications* contains contributions describing technologies that are under consideration as standards for such applications as digital cellular communications, the half-rate American and European

coding standards A brief Introduction is followed by a section dedicated to low delay speech coding a research direction which emerged as a result of the CCITT requirement for a universal low delay 16 kbit s speech coding technology and now continues with the objective of achieving toll quality with moderate delay at a rate of 8 kbit s A section on the important topic of speech quality evaluation is then presented This is followed by a section on speech coding for wireless transmission and a section on audio coding which covers not only 7 kHz bandwidth speech but also wideband coding applicable to high fidelity music The book concludes with a section on speech coding for noisy transmission channels followed by a section addressing future research directions Speech and Audio Coding for Wireless and Network Applications presents a cross section of the key contributions in speech and audio coding which have emerged recently For this reason the book is a valuable reference for all researchers and graduate students in the speech coding community

Heritage Languages at the Crossroads: Cultural Contexts, Individual Differences, and Methodologies Brechje Antonet Van Osch,Alicia Luque,Jason Rothman,Selim Tiryakiol,Nadine Kolb,2025-02-10 This Research Topic focuses on heritage languages at the crossroads by approaching heritage language bilingualism in an interdisciplinary way A language qualifies as a heritage language if it is a minority language spoken at home in a majority language context Any language can be the societal majority language in one context and the heritage language in another While the number of empirical studies on language acquisition and processing in heritage language bilingualism has increased in recent years heritage language bilinguals are an understudied subgroup of bilinguals When examined as adults heritage speaker bilinguals tend to show significant differences in their heritage language performance use and competence grammatical knowledge from one another This variation is particularly unusual because heritage speakers like monolinguals are native speakers of the heritage language

The Evolution of Rhythm Cognition: Timing in Music and Speech Andrea Ravignani,Henkjan Honing,Sonja A. Kotz,2018-07-24 Human speech and music share a number of similarities and differences One of the closest similarities is their temporal nature as both i develop over time ii form sequences of temporal intervals possibly differing in duration and acoustical marking by different spectral properties which are perceived as a rhythm and iii generate metrical expectations Human brains are particularly efficient in perceiving producing and processing fine rhythmic information in music and speech However a number of critical questions remain to be answered Where does this human sensitivity for rhythm arise How did rhythm cognition develop in human evolution How did environmental rhythms affect the evolution of brain rhythms Which rhythm specific neural circuits are shared between speech and music or even with other domains Evolutionary processes long time scales often prevent direct observation understanding the psychology of rhythm and its evolution requires a close fitting integration of different perspectives First empirical observations of music and speech in the field are contrasted and generate testable hypotheses Experiments exploring linguistic and musical rhythm are performed across sensory modalities ages and animal species to address questions about domain specificity development and an evolutionary path of rhythm Finally experimental insights are

integrated via synthetic modeling generating testable predictions about brain oscillations underlying rhythm cognition and its evolution Our understanding of the cognitive neurobiological and evolutionary bases of rhythm is rapidly increasing However researchers in different fields often work on parallel potentially converging strands with little mutual awareness This research topic builds a bridge across several disciplines focusing on the cognitive neuroscience of rhythm as an evolutionary process It includes contributions encompassing although not limited to 1 developmental and comparative studies of rhythm e g critical acquisition periods innateness 2 evidence of rhythmic behavior in other species both spontaneous and in controlled experiments 3 comparisons of rhythm processing in music and speech e g behavioral experiments systems neuroscience perspectives on music speech networks 4 evidence on rhythm processing across modalities and domains 5 studies on rhythm in interaction and context social affective etc 6 mathematical and computational e g connectionist symbolic models of rhythmicity as an evolved behavior

Learning a non-native language in a naturalistic environment: Insights from behavioural and neuroimaging research Christos Pliatsikas, Vicky Chondrogianni, 2015-09-02

It is largely accepted in the relevant literature that successful learning of one or more non native languages is affected by a number of factors that are independent of the target language s per se these factors include the age of acquisition AoA of the target language s the type and amount of formal instruction the learners have received as well as the amount of language use that the learners demonstrate Recent experimental evidence suggests that one crucial factor for efficient native like performance in the non native language is the amount of naturalistic exposure or immersion that the learners receive to that language This can be broadly defined as the degree to which language learners use their non native language outside the classroom and for their day to day activities and usually presupposes that the learners live in an environment where their non native language is exclusively or mostly used Existing literature has suggested that linguistic immersion can be beneficial for lexical and semantic acquisition in a non native language as well as for non native morphological and syntactic processing More recent evidence has also suggested that naturalistic learning of a non native language can also have an impact on the patterns of brain activity underlying language processing as well as on the structure of brain regions that are involved expressed as changes in the grey matter structure This Research Topic brings together studies on the effects of learning and speaking a non native language in a naturalistic environment These include more efficient or native like processing in behavioural tasks tapping on language lexicon morphology syntax as well as changes in the brain structure and function as revealed by neuroimaging studies
