Mobile and Personal Satellite Communications 3 Marina Ruggieri, 2012-12-06 This book of Proceedings contains papers of the Third European Workshop on Mobile Personal Satcoms EMPS 98 held in Venice Italy November 1998 For the third time EMPS has given to the experts an opportunity for exchanging opinions and novel ideas in the exciting field of mobile and personal satellite communications As with the 1996 edition EMPS 98 issued a formal call for papers gathering a large number of contributions from many different countries Each submitted paper has been reviewed by international referees and finally selected by the Workshop Steering Committee WSC Furthermore key topics in the field of mobile personal satcoms have also been focused on through a few invited papers As EMPS has been conceived to gather trends and novelties in the field of mobile personal satcoms it is tightly matched to the natural evolution of the field itself In this frame the reader will notice how the dominant topics are related to system and network issues while a very little number of contributions have been provided in the propagation and channel related areas This represents a natural trend of a field where deep efforts have been paid in the past years to understanding and modelling the physical layer and where the present interest is mostly migrating to the applications Further changes and novelties may be envisaged in the future of this field I believe that EMPS will continue to represent an effective opportunity to catch and understand more deeply this evolution

Location-Based Services Axel Küpper, 2005-10-31 Location based Services LBSs are mobile services for providing information that has been created compiled selected or filtered under consideration of the users current locations or those of other persons or mobile devices Typical examples are restaurant finders buddy trackers navigation services or applications in the areas of mobile marketing and mobile gaming The attractiveness of LBSs is due to the fact that users are not required to enter location information manually but are automatically pinpointed and tracked This book explains the fundamentals and operation of LBSs and gives a thorough introduction to the key technologies and organizational procedures offering comprehensive coverage of positioning methods location protocols and service platforms alongside an overview of interfaces languages APIs and middleware with examples demonstrating their usage Explanation and comparison of all protocols and architectures for location services In depth coverage of satellite cellular and local positioning All embracing introduction to 3GPP positioning methods such as Cell Id E OTD U TdoA OTDoA IPDL and Assisted GPS Explains the operation of enhanced emergency services such as E 911 Identifies unsolved research issues and challenges in the area of LBSs This comprehensive guide will be invaluable to undergraduate and postgraduate students and lecturers in the area of telecommunications It will also be a useful resource to developers and researchers seeking to expand their knowledge in this field

GPRS Networks Geoff Sanders, Lionel Thorens, Manfred Reisky, Oliver Rulik, Stefan Deylitz, 2004-01-09 GPRS is a packet based wireless communication service that offers data rates from 9 05 up to 171 2 Kbps and continuous connection to the Internet for mobile phone and computer users GPRS is based on GSM communications and complements existing services such as circuit switched cellular phone connections and the Short Message Service SMS GPRS represents the bridge between 2G and 3G mobile telecommunications and is commonly referred to as 2 5G Implementation of GPRS requires modification of the existing GSM networks in that GSM is a circuit switched technology while GPRS is packet oriented GPRS enables packet data the same as is used by an Ethernet LAN WAN or the Internet to be sent to and from a mobile station e g mobile phone PDA or Laptop WAP and SMS can also be sent using GPRS and individuals working with GPRS need to learn and understand how the mobile stations the air interface network architecture protocol structures and signalling procedures must be modified GPRS offers much higher data rates than GSM and can be combined with 3G technologies such as EDGE to give even higher bit rates It offers many benefits for customers and network operators such as volume rather than time dependent billing and more efficient use of network resources Due to the worldwide delay in implementing 3G solutions such as CDMA and UMTS the demand for GPRS is still growing GPRS Networks Offers detailed information ranging from standards to practical implementation Answers how and why rather than just simply re stating GPRS specifications Provides comprehensive coverage in a single volume Essential reading for all telecommunications project managers field engineers technical staff in network operator and manufacturing organisations GPRS application and service developers Datacoms IT engineers The

comprehensive coverage also makes this a superb reference for students of computer science telecommunications and electrical engineering
