Image Processing for Computer Graphics and Vision Luiz Velho, Alejandro C. Frery, Jonas Gomes, 2009-04-29 Image processing is concerned with the analysis and manipulation of images by computer Providing a thorough treatment of image processing with an emphasis on those aspects most used in computer graphics the authors concentrate on describing and analyzing the underlying concepts rather than on presenting algorithms or pseudocode As befits a modern introduction to this topic a good balance is struck between discussing the underlying mathematics and the main topics signal processing data discretization the theory of colour and different colour systems operations in images dithering and half toning warping and morphing and image processing This second edition reflects recent trends in science and technology that exploit image processing in computer graphics and vision applications Stochastic image models and statistical methods for image processing are covered as are A modern approach and new developments in the area Probability theory for image processing Applications in image analysis and computer vision **Introduction to Visual Computing** Aditi Majumder, M. Gopi, 2018-01-31 Introduction to Visual Computing Core Concepts in Computer Vision Graphics and Image Processing covers the fundamental concepts of visual computing Whereas past books have treated these concepts within the context of specific fields such as computer graphics computer vision or image processing this book offers a unified view of these core concepts thereby providing a unified treatment of computational and mathematical methods for creating capturing analyzing and manipulating visual data e g 2D images 3D models Fundamentals covered in the book include convolution Fourier transform filters geometric transformations epipolar geometry 3D reconstruction color and the image synthesis pipeline The book is organized in four parts The first part provides an exposure to different kinds of visual data e g 2D images videos and 3D geometry and the core mathematical techniques that are required for their processing e g interpolation and linear regression The second part of the book on Image Based Visual Computing deals with several fundamental techniques to process 2D images e g convolution spectral analysis and feature detection and corresponds to the low level retinal image processing that happens in the eye in the human visual system pathway The next part of the book on Geometric Visual Computing deals with the fundamental techniques used to combine the geometric information from multiple eyes creating a 3D interpretation of the object and world around us e g transformations projective and epipolar geometry and 3D reconstruction This corresponds to the higher level processing that happens in the brain combining information from both the eyes thereby helping us to navigate through the 3D world around us The last two parts of the book cover Radiometric Visual Computing and Visual Content Synthesis These parts focus on the fundamental techniques for processing information arising from the interaction of light with objects around us as well as the fundamentals of creating virtual computer generated worlds that mimic all the processing presented in the prior sections The book is written for a 16 week long semester course and can be used for both undergraduate and graduate teaching as well as a reference for professionals *Image Processing and Jump Regression*

Analysis Peihua Qiu, 2005-05-06 The first text to bridge the gap between image processing and jump regression analysis Recent statistical tools developed to estimate jump curves and surfaces have broad applications specifically in the area of image processing Often significant differences in technical terminologies make communication between the disciplines of image processing and jump regression analysis difficult In easy to understand language *Image Processing and Jump Regression Analysis* builds a bridge between the worlds of computer graphics and statistics by addressing both the connections and the differences between these two disciplines The author provides a systematic analysis of the methodology behind nonparametric jump regression analysis by outlining procedures that are easy to use simple to compute and have proven statistical theory behind them Key topics include Conventional smoothing procedures Estimation of jump regression curves Estimation of jump location curves of regression surfaces Jump preserving surface reconstruction based on local smoothing Edge detection in image processing Edge preserving image restoration With mathematical proofs kept to a minimum this book is uniquely accessible to a broad readership It may be used as a primary text in nonparametric regression analysis and image processing as well as a reference guide for academicians and industry professionals focused on image processing or curve surface estimation *Computer Vision, Graphics, and Image Processing* Snehasis Mukherjee, Suvadip Mukherjee, Dipti Prasad Mukherjee, Jayanthi Sivaswamy, Suyash Awate, Srirangaraj Setlur, Anoop M.
