Thermodynamics of Flowing Systems Antony N. Beris, Brian J. Edwards, 1994-05-26 This much needed monograph presents a systematic step by step approach to the continuum modeling of flow phenomena exhibited within materials endowed with a complex internal microstructure such as polymers and liquid crystals By combining the principles of Hamiltonian mechanics with those of irreversible thermodynamics Antony N Beris and Brian J Edwards renowned authorities on the subject expertly describe the complex interplay between conservative and dissipative processes Throughout the book the authors emphasize the evaluation of the free energy largely based on ideas

from statistical mechanics and how to fit the values of the phenomenological parameters against those of microscopic models With Thermodynamics of Flowing Systems in hand mathematicians engineers and physicists involved with the theoretical study of flow behavior in structurally complex media now have a superb self contained theoretical framework on which to base their modeling efforts

Photonics Spectra, 1987 Fluid Dynamics for the Study of Transonic Flow Heinrich J. Ramm, 1990-02-01 This new book leads readers step by step through the complexities encountered as moving objects approach and cross the sound barrier The problems of transonic flight were apparent with the very first experimental flights of scale model rockets when the disastrous impact of shock waves and flow separations caused the aircraft to spin wildly out of control Today many of these problems have been overcome and this book offers an introduction to the transonic theory that has made possible many of these advances The emphasis is on the most important basic approaches to the solution of transonic problems The book also includes explanations of common pitfalls that must be avoided An effort has been made to derive the most important equations of inviscid and viscous transonic flow in sufficient detail so that even novices may feel confident in their problem solving ability The use of computer approaches is reviewed with references to the extensive literature in this area while the critical shortcomings of an exclusive reliance on computational methods are also described The book will be valuable to anyone who needs to acquire an understanding of transonic flow including practicing engineers as well as students of fluid mechanics

The Mathematical Theory of Plasticity Rodney Hill, 1998 First published in 1950 this important and classic book presents a mathematical theory of plastic materials written by one of the leading exponents

Signal Processing, Theories and Applications, 1988 Bioradicals Detected by ESR Spectroscopy Hiroaki Ohya-Nishiguchi, Lester Packer, 2012-12-06 This book is based on two keywords Bioradical and ESR Bioradical is a newly coined word which encompasses paramagnetic species in biological systems such as active oxygen radicals and transition metal ions Research on the structure and function of bioradicals has been attracting growing attention in the field of biological science and comprehensive investigations from many fields are helping to understand the real features of these species ESR spectroscopy also has interdisciplinary features in that its techniques have been applied to many fields ranging

from physics to medicine It was our hope therefore that this book would help to clarify many aspects of bioradicals and that significant progress would be achieved in combining basic research from many different fields This book arises from the First International Conference on Bioradicals Detected by ESR Spectroscopy ICBES which was held in Yamagata a city in the Yamagata Prefecture of Japan in 1994 About 300 participants from 16 different countries attended this conference and about 170 papers were presented This book is a collection of contributions from the conference and also contains eleven chapters selected by the editorial board based on suggestions from the members of the international editorial board of ICBES The Yamagata Technopolis Foundation is developing a biomedical technology for the 21st century based on life science fused with material and physical science Based on such a technology the Foundation plans to share its fruits all over the world
