*Imaging in Clinical Oncology* Athanasios D. Gouliamos, John A. Andreou, Paris A. Kosmidis, 2018-10-04 This is the second edition of a well received book reflecting the state of the art in oncologic imaging research and promoting mutual understanding and collaboration between radiologists and clinical oncologists It presents all currently available imaging modalities and covers a broad spectrum of oncologic diseases for most organ systems Today oncologic imaging faces the challenge of improving and refining concepts for precise tumor delineation and biologic functional tumor characterization as well as for purposes of creating individual treatment plans The concept of radiomics has further advanced the conversion of images into mineable data and subsequent analysis of said data for decision making support Since the release of the book's first edition radiomics has been introduced in oncology studies and can be performed with tomographic images from CT MRI and PET CT studies The combination of radiomic data

with genomic features is known as radiogenomics and can potentially offer additional decision making support This book will be of interest to clinical oncologists with regard to the diagnosis staging treatment and follow up on various tumors affecting the CNS chest abdomen urogenital and musculoskeletal systems     Diagnostic Imaging: Oncology E-Book Akram M.

**Identifying Novel Biomarkers in Bladder Cancer, 2nd edition** Thornsten Ecke,Thierry Massfelder,2023-07-18 Bladder cancer is one of the most common urological diseases with a high mortality rate and poor prognosis It is currently ranked as the 10th most common malignancy worldwide The majority of bladder cancer patients have been found to be diagnosed with non muscle invasive bladder cancer NMIBC and the remaining are diagnosed with muscle invasive bladder cancer MIBC Although there have been advances in the treatment and therapies provided for bladder cancer patients the survival rate remains low primarily due to recurrence and metastasis of the disease following treatment Surgical treatment is currently the most common form including radical cystectomy which is the standard form of treatment combined with neoadjuvant chemotherapy However the 5 year overall survival rate is 50% Therefore further studies are required to understand the molecular mechanisms involved in the progression of bladder cancer and identify novel biomarkers to act as a diagnostic tool for patients There have been many studies involving the detection of biomarkers in bladder cancer in addition to monitoring disease recurrence to understand the impact and predict potential outcomes A variety of urine biomarkers have been developed to detect bladder cancer and prognostic risk stratification including mutational DNA and the levels of RNA expression Circulating tumor cells have also been identified as a potential biomarker for bladder cancer

patients However there are significant challenges as bladder cancer has demonstrated high levels of cellular and molecular heterogeneity and some markers do not have sufficient sensitivity for accurate detection Therefore further studies are required to continue to identify new novel biomarkers for bladder cancer The aim of this Research Topic is to discuss novel biomarkers in bladder cancer and how it impacts the disease progression and the survival rate for bladder cancer patients
