Immunological Approaches To Contraception And Promotion Of Fertility Reproductive Biology:

Immunological Approaches to Contraception and Promotion of Fertility Gursaran Talwar, 2013-03-09

Contraceptive research has entered the new age of vaccines. Realistic prospects exist for the development of an entirely new battery of vaccines for use in human and veterinary medicine. Among them may be anti-fertility vaccines based on physiological mechanisms applicable to either the female or male. This volume is a comprehensive review, a status report of the subjects including fundamental work on the search for useful epitopes and ranging to applied vaccinology. One vaccine to prevent pregnancy for use by women has already been studied extensively. G. P. Talwar, the volume's editor and his colleagues in New Delhi, India, published in 1976 a landmark series of papers describing the immunological properties of a preparation consisting of the alum-precipitated beta subunit of human chorionic gonadotropin (hCG) chemically linked to tetanus toxoid. The principle of enhancing antigenicity of a self-protein by linkage of the epitope to a carrier protein was employed and tested clinically. These trials, carried out under the auspices of the Indian Council for Medical Research, were the first application of the carrier protein concept for a vaccine for human use. The encouraging results stimulated a wave of research not only on the use of hCG-based vaccines but on other antigens as well.

National Library of Medicine Current Catalog National Library of Medicine (U.S.), *Current Catalog* National Library of Medicine (U.S.), 1992. First multi-year cumulation covers six years 1965-70. *Autocrine and Paracrine Mechanisms in Reproductive Endocrinology* L.

Krey, 2013-11-11. There is a provision in the charter of each Study Section of the Division of Research Grants at the National Institutes of Health that stipulates that workshops are to be held periodically to aid Study Section members in their appraisals of recent developments in their fields and to identify future challenges worthy of investigation. The Reproductive Endocrinology Study Section was established on December 13, 1985, to review research grants and research training activities relating to reproductive endocrinology, including aspects of management of reproductive endocrine disorders and hormonal imbalances as related to infertility and during pregnancy and puberty, breast cancer and prostate cancer. It held its first workshop entitled *Autocrine and Paracrine Mechanisms in Reproductive Endocrinology* in October 1988 in Shrewsbury, MA, at The Worcester Foundation for Experimental Biology. The proceedings of this workshop, which are detailed herein, reflect the fact that autocrine and paracrine interactions are rapidly being accepted as an exciting area of research by scientists investigating the physiological and biochemical mechanisms of hormone action in the male and female reproductive systems. The material covered is novel and wide-ranging, extending from theoretical considerations of mechanisms of growth factor action and the role of cell cycle stage in determining hormone action to investigations of autocrine and paracrine interactions during development to discussions of the potential clinical ramifications of the basic research findings. Such an extensive inventory is necessary for two reasons.

[AIDS and Women's Reproductive Health](#) Lincoln C. Chen, Jaime Sepulveda Amor, Sheldon J. Segal, 2012-12-06. Over the past decade the AIDS pandemic has propagated so widely and exerted

such a devastating impact that one may properly ask the question Why not concentrate all AIDS efforts on disease control alone Why link AIDS with women's reproductive health What is the scientific basis for this linkage And how might AIDS control and women's health objectives be promoted simultaneously These questions constitute the principal themes addressed in this monograph The 15 chapters in this volume are intended to provide state of the art reviews of key interactions between AIDS and women's reproductive health for an audience of scientists and policy makers in the AIDS and population fields Impetus for this monograph comes in part from what we perceive to be an inadequate global response thus far to AIDS and women's health problems A common platform has failed to emerge among the disparate professional communities working in the areas of AIDS STDs and family planning As a result endeavors in these fields have been isolated and opportunities for joint action have been missed An enormous and as yet unharnessed potential exists for powerful interdisciplinary collaborations that could strengthen policies and programs against these pressing health problems of humankind

Reproductive Tract Infections Adrienne Germain, King K. Holmes, Peter Piot, Judith Wasserheit, 2013-06-29

Reproductive tract infections (RTIs) have become a silent epidemic that is devastating women's lives Each year thousands of women die needlessly from the consequences of these infections including cervical cancer ectopic pregnancy acute and chronic infections of the uterus and the fallopian tubes and puerperal infections For many women this happens because they receive medical attention too late if at all The terrible irony of this tragedy is that early diagnosis and treatment for many RTIs do not require high technology health care For the hundreds of millions of women with chronic RTIs acquired from their sexual partners life can become a living hell Infection is a major cause of infertility and it leads to scorn and rejection in many countries These women may experience constant pain have festering lesions of the genital tract be at enhanced risk of secondary diseases and endure social ostracism The problems associated with RTIs have grown even greater in the past decade with the emergence of human immunodeficiency virus (HIV) and AIDS Preexisting sexually transmitted disease particularly when associated with genital tract ulcers raises women's vulnerability to the transmission of HIV 3-5 fold

Endocrine and Biochemical Development of the Fetus and Neonate Jose M. Cuezva, Ana M. Pascual-Leone, Mulchand S. Patel, 2013-06-29

The annual meeting of the Perinatal Biochemical Group of the Spanish Biochemical Society held in Madrid on December 15-16 1989 provided an excellent opportunity to bring together a group of distinguished investigators both from Spain and from abroad with a common interest in developmental endocrinology and biochemistry The aim of the symposium was to present and discuss the most recent developments in the areas of endocrine and biochemical processes critical to normal growth and maturation of the newborn To achieve a high degree of interaction among the participants subject reviews as well as short communications were included in the program The reviews provided in-depth information on selected important topics The purpose of short communications was two-fold i) to provide a forum to discuss ongoing investigations on related areas and ii) to present opportunities for active participation by young investigators This format

proved very successful in generating fruitful discussions among the participants Taken together the review chapters and the short communications have resulted in a coherent and unified subject presentation Advances in biochemistry molecular biology and cell biology have provided not only new and exciting experimental approaches but also have opened up new directions in the investigation of differentiation and developmental processes at cellular molecular and biochemical levels during the early stages of growth and maturation In recent years a wealth of information in these areas of development has emerged at a rapid rate

Contraceptive Research and Development Committee on Contraceptive Research and Development, Institute of Medicine, 1996-11-18 The contraceptive revolution of the 1960s and 1970s introduced totally new contraceptive options and launched an era of research and product development Yet by the late 1980s conditions had changed and improvements in contraceptive products while very important in relation to improved oral contraceptives IUDs implants and injectables had become primarily incremental Is it time for a second contraceptive revolution and how might it happen Contraceptive Research and Development explores the frontiers of science where the contraceptives of the future are likely to be found and lays out criteria for deciding where to make the next R D investments The book comprehensively examines today's contraceptive needs identifies niches in those needs that seem most readily translatable into market terms and scrutinizes issues that shape the market method side effects and contraceptive failure the challenge of HIV AIDS and other sexually transmitted diseases and the implications of the women's agenda Contraceptive Research and Development analyzes the response of the pharmaceutical industry to current dynamics in regulation liability public opinion and the economics of the health sector and offers an integrated set of recommendations for public and private sector action to meet a whole new generation of demand

Immunobiology of Reproduction Joan S. Hunt, 2012-12-06 Over the last several decades many biologists have been intrigued with the immunological paradox of pregnancy where maternal and fetal tissues peaceably coexist despite their genetic differences With the development of new insights on the interactive components of the immune system as well as the generation of powerful new molecular and cellular tools singular progress has been made in understanding immunological events that culminate in successful pregnancy This volume contains the proceedings for the first US symposium on the Immunobiology of Reproduction held August 26-29 1993 in Boston Massachusetts Papers address hemopoietic cells in reproductive tissues growth factors cytokines in the female reproductive tract and placenta growth factor networks in pregnancy loss and cancer placental expression of major histocompatibility complex and associated genes experimental models of MHC gene expression and immunological aspects of human infertility

Contraceptive Steroids A. T. Gregoire, 2013-03-13 One of the United States Food and Drug Administration's most difficult tasks is the assessment of risk benefit ratios for a broad spectrum of therapeutic and prophylactic drugs Furthermore it is now widely recognized that no drug chemical or even natural substance is completely devoid of risk Nowhere has this issue been the subject of more controversy than with steroidal contraceptive drugs Regulated as a special class of products because of their prophylactic

use in healthy individuals for prevention of pregnancy rather than for treatment of disease steroid contraceptives drugs undergo more extensive animal safety tests than any other pharmaceutical agent This view also contemplates the availability of alternative contraceptive measures posing fewer risks but the use of less effective methods must take into consideration the hazards associated with pregnancy itself In April 1983 the Food and Drug Administration and the National Institutes of Health in cooperation with the World Health Organization the Population Council and the Agency for International Development sponsored a three day workshop to evaluate current guidelines for preclinical safety studies of contraceptive drugs in light of our extensive knowledge of the side effects of marketed products The meeting included presentations by experts in the fields of comparative metabolism pharmacokinetics pharmacology carcinogenicity toxicology coagulation lipid metabolism epidemiology and pathology at a meeting of the Fertility and Maternal Health Drugs Advisory Committee of the National Center for Drugs and Biologics Food and Drug Administration

Uterine and Embryonic Factors in Early Pregnancy Jerome F. Strauss III, C. Richard Lyttle, 2012-12-06 Human reproduction is the most dynamic of processes The events which lead to the birth of a normal healthy infant have their origin long before actual fertilization Indeed the whole process can be looked upon as a continuum Human fertilization and early development once sequestered in the protective environment of the fallopian tubes and uterus have now been exposed in the laboratory These events have over time been extensively observed and catalogued in animal models The tools of modern morphology and molecular biology have reopened issues long since considered settled as facets of early reproduction are reexplored This volume consisting of the proceedings of a workshop on uterine and embryonic factors in early pregnancy has been designed to enhance that effort Attention is focused largely on early embryonal development with special attention to the interrelationship between the embryo and the uterus in early pregnancy Each of the contributing scientists brings with him or her the perspective of one specific discipline or another The common denominator is the application of emerging techniques in modern molecular biology to problems pertaining to embryonal uterine interaction The goal is to consider specific areas of concern in a multidisciplinary way and to reexplore the factors behind early development and implantation Uterine complement the function of uterine macrophages immunoregulatory loops in the peri implantation period colony stimulating factors and interferon like factors are reviewed and their interrelationship explored Uterine angiogenesis factors as well as embryonic growth factors are also considered

Health and Population, Perspectives and Issues, 1988 Demographic and Programmatic Consequences of Contraceptive Innovations Sheldon J.

Segal, Amy O. Tsui, Susan M. Rogers, 2012-12-06 This volume contains papers presented at the Conference on the Demographic and Programmatic Consequences of Contraceptive Innovations which was sponsored by the Committee on Population and held at the National Academy of Sciences October 6-7 1988 The papers consider how new contraceptive methods currently being developed and changes in the use of already available contraceptives could affect contraceptive practice levels and patterns of abortion use and the health of women In addition several of the papers review the probable consequences of introducing new technology into family planning programs in developing countries The Committee on Population sponsored this conference in order to stimulate thinking and to provide a forum for scientists family planning program managers and donor agency personnel to exchange information and ideas about these important issues The committee is publishing these papers to expand the discussion of consequences of contraceptive innovations and to give scientists policy makers and members of the public who could not attend the conference an opportunity to learn about new developments in fertility control and their likely consequences for individuals and the societies in which they live

Veterinary Vaccines R. Pandey, S. Höglund, G. Prasad, 2012-12-06 Vaccines have historically been considered to be the most cost effective method for preventing communicable diseases It was a vaccine that enabled global eradication of the dreaded disease smallpox Mass immunization of children forms the anchor of the strategy of the World Health Organization WHO to attain health for all status by the year 2000 Vaccinology is undergoing a dimensional change with the advances that have taken place in immunology and genetic engineering Vaccines that confer short or inadequate immunity or that have side effects are being replaced by better vaccines New vaccines are being developed for a variety of maladies Monoclonal antibodies and T cell clones have been employed to delineate the immunodeterminants on microbes an approach elegantly complemented by computer graphics and molecular imaging techniques Possibilities have opened for obtaining hitherto scarce antigens of

parasites by the DNA recombinant route Better appreciation of the idiotypic network has aroused research on anti idiotypic vaccines Solid phase synthesis of peptides is leading to an array of synthetic vaccines an approach that is expected to attain its full potential once the sequences activating suppressor cells are discovered and the rules for presentation of antigens to T and B cells are better worked out A new breed of vaccines is on the horizon that seeks to control fertility Originally conceived to intercept a step in the reproductive process they are conceptual models for developing approaches to regulate the body s internal processes
