Environmental Radiation Effects on Mammals Olga A. Smirnova, 2010-12-17

The monograph is devoted to the theoretical studies of radiation effects on mammals It summarizes the results obtained by the

author over the past 30 years most of them being of high priority In the course of these studies a single approach to the modeling of radiation effects on mammals has been elaborated Specifically in the framework of the developed deterministic mathematical models the effects of both acute and chronic irradiation in a wide range of doses and dose rates on vital body systems hematopoiesis small intestine and humoral immunity as well as on the development of autoimmune diseases are investigated The radiation effects on the mortality dynamics in homogeneous and nonhomogeneous in radiosensitivity mammalian populations are also studied by making use of the developed stochastic models The most appealing feature of these mortality models consists of the fact that they account for the intrinsic properties of the exposed organism Namely within these models the stochastic biometrical functions are calculated proceeding from statistical characteristics and dynamics of the respective critical body system hematopoiesis or small intestine The performed theoretical investigations contribute to the development of the system and quantitative approaches in radiation biology and ecology These studies elucidate the major regulatory mechanisms of the damage and recovery processes running in the vital body systems of exposed mammals and reveal the key parameters characterizing the processes

Isolation and Characterization of Uncle Fester, an Allorecognition Molecule in the Primitive Chordate, Botryllus Schlosseri Tanya Renee McKittrick, 2011 transmembrane helices and a short intracellular tail Sequences from over 70 individuals collected from populations along the West Coast of North America and two populations from the North East coast revealed that uncle fester is remarkably non polymorphic with only two single nucleotide polymorphisms and one amino acid deletion found to be segregating within these populations I first determined uncle fester expression by RT PCR and found that expression begins in the early stages of embryonic development and continues throughout the life cycle of the individual These studies also revealed that uncle fester is alternatively spliced in the embryo tadpole and adult stages of development Each adult examined thus far expresses three alternative splice variants however embryos and tadpole larvae express an additional set of splice variants The roles of these splice variants remain unknown I then performed in situ hybridization on tadpole larvae juveniles and adult colonies using an uncle fester specific riboprobe to determine where the uncle fester mRNA is localized The results indicate that uncle fester mRNA is found on the larval adhesive papillae the epithelia of the ampullae and on a subset of blood cells all tissues known to be involved in the allorecognition response I also created two monoclonal antibodies to the uncle fester protein and results from whole mount immunohistochemistry are concordant with the mRNA in situ hybridization data The methods and characterization of the uncle fester antibodies can be found in Chapter 4 Previous studies have shown that fester is also expressed along the epithelia of the ampullae To determine if both proteins are co expressed on the same populations of cells I performed double labeled FACS and IF using directly conjugated fester and uncle fester mAbs Results indicated that all cells that express uncle fester also express fester and in addition there is a population of fester uncle fester cells found migrating within the tunic To determine if uncle fester was functionally involved in the allorecognition response I used two distinct approaches First I delivered custom siRNA to individuals while surgically removing the ampullar tissue essentially forcing the animals to regenerate new ampullae under the effects of the siRNA and eliminating the uncle fester protein When incompatible colonies were paired while under the effects of siRNA the allorecognition response was never initiated and the two colonies eventually grew over the top of each

other However the application of uncle fester siRNA had no effect on compatible colonies suggesting that the activation of a rejection reaction is independent of a fusion response The second approach was to stimulate function using the uncle fester specific monoclonal antibodies By conjugating the mAb to magnetic beads I was able to localize the antibody to the epithelia of ampullae which resulted in the formation of strong points of rejection on a single colony In summary I found that uncle fester is a non polymorphic type I transmembrane protein that expresses a limited repertoire of alternative splice variants It is co localized with both the fuhc and fester on all tissues important to the allorecognition response Functionally uncle fester is required to activate a rejection response but plays no role in compatible interactions These results have transformed our working hypothesis from allorecognition consisting of a single activating pathway to one consisting of two independent activating and inhibitory pathways that control histocompatibility outcomes **USMLE Step 1 Recall** Brent A.

Goater, Cameron P. Goater, Gerald W. Esch, 2013-12-16 Reflecting the enormous advances made in the field over the past ten years this text synthesizes the latest developments in the ecology and evolution of animal parasites against a backdrop of parallel advances in parasite systematics biodiversity and life cycles This second edition has been thoroughly revised to meet the needs of a new generation of parasitology students Balancing traditional approaches in parasitology with modern studies in parasite ecology and evolution the authors present basic ecological principles as a unifying framework to help students understand the complex phenomenon of parasitism Richly illustrated with over 250 figures the text is accompanied by case study boxes designed to help students appreciate the complexity and diversity of parasites and the scientists who study them This unique approach presented clearly and with a minimum of jargon and mathematical detail encourages students from diverse backgrounds to think generally and conceptually about parasites and parasitism *Current Catalog* National Library of Medicine (U.S.), 1985 First multi year cumulation covers six years 1965 70
