The New Cambridge History of Islam: Volume 4, Islamic Cultures and Societies to the End of the Eighteenth Century Robert Irwin, 2010-11-04 Robert Irwin's authoritative introduction to the fourth volume of *The New Cambridge History of Islam* offers a panoramic vision of Islamic culture from its origins to around 1800. The introductory chapter which highlights key developments and introduces some of Islam's most famous protagonists paves the way for an extraordinarily varied collection of essays. The themes treated include religion and law conversion Islam's relationship with the natural world governance and politics caliphs and kings philosophy science medicine language art architecture literature music and even cookery. What emerges from this rich collection written by an international team of experts is the diversity and dynamism of the societies which created this flourishing civilization. Volume four of *The New Cambridge History of Islam* serves as a thematic companion to the three preceding politically oriented volumes and in coverage extends across the pre-modern Islamic world.

The Colonial Origins of Modern Social Thought George Steinmetz, 2025-02-25 A new history of French social thought that connects postwar sociology to colonialism and empire. In this provocative and original retelling of the history of French social thought, George Steinmetz places the history and development of modern French sociology in the context of the French empire after World War II. Connecting the rise of all the social sciences with efforts by France and other imperial powers to consolidate control over their crisis-ridden colonies, Steinmetz argues that colonial research represented a crucial core of the nascent academic discipline of sociology, especially between the late 1930s and the 1960s. Sociologists who became favored partners of colonial governments were asked to apply their expertise to such social problems as detribalization urbanization poverty and labor migration. This colonial orientation permeated all the major subfields of sociological research, Steinmetz contends, and is at the center of the work of four influential scholars: Raymond Aron, Jacques Berque, Georges Balandier, and Pierre Bourdieu. In retelling this history, Steinmetz develops and deploys a new methodological approach that combines attention to broadly contextual factors, dynamics within the intellectual development of the social sciences and sociology in particular, and close readings of sociological texts. He moves gradually toward the postwar sociologists of colonialism and their writings, beginning with the most macroscopic contexts which included the postwar reoccupation of the French empire and the turn to developmentalist policies and the resulting demand for new forms of social scientific expertise. After exploring the colonial engagement of researchers in sociology and neighboring fields before and after 1945, he turns to detailed examinations of the work of Aron who created a sociology of empires, Berque the leading historical sociologist of North Africa, Balandier the founder of French Africanist sociology, and Bourdieu whose renowned theoretical concepts were forged in war-torn late colonial Algeria.

Exploration and Science Michael Sean Reidy, Gary

Kroll,Erik M. Conway,2006-12-27 This comprehensive volume explores the intricate mutually dependent relationship between science and exploration how each has repeatedly built on the discoveries of the other and in the process opened new frontiers A simple question Which came first advances in navigation or successful voyages of discovery A complicated answer Both and neither For more than four centuries scientists and explorers have worked together sometimes intentionally and sometimes not in an ongoing symbiotic partnership When early explorers brought back exotic flora and fauna from newly discovered lands scientists were able to challenge ancient authorities for the first time As a result scientists not only invented new navigational tools to encourage exploration but also created a new approach to studying nature in which observations were more important than reason and authority The story of the relationship between science and exploration analyzed here for the first time is nothing less than the history of modern science and the expanding human universe **Blueprint for the Future** National Research Council,Policy and Global Affairs,Committee on Women in Science, Engineering, and Medicine,Committee on Status and Participation of Women in STEM Disciplines and Careers,2012-10-02 The scientific work of women is often viewed through a national or regional lens but given the growing worldwide connectivity of most if not all scientific disciplines there needs to be recognition of how different social political and economic mechanisms impact women s participation in the global scientific enterprise Although these complex sociocultural factors often operate in different ways in various countries and regions studies within and across nations consistently show inverse correlations between levels in the scientific and technical career hierarchy and the number of women in science the higher the positions the fewer the number of women Understanding these complex patterns requires interdisciplinary and international approaches In April 2011 a committee overseen by the National Academies standing Committee on Women in Science Engineering and Medicine CWSEM convened a workshop entitled Blueprint for the Future Framing the Issues of Women in Science in a Global Context in Washington D C CWSEM s goals are to coordinate monitor and advocate action to increase the participation of women in science engineering and medicine The scope of the workshop was limited to women s participation in three scientific disciplines chemistry computer science mathematics and statistics The workshop presentations came from a group of scholars and professionals who have been working for several years on documenting analyzing and interpreting the status of women in selected technical fields around the world Examination of the three disciplines chemistry computer science and mathematics and statistics can be considered a first foray into collecting and analyzing information that can be replicated in other fields The complexity of studying science internationally cannot be underestimated and the presentations demonstrate some of the evidentiary and epistemological challenges that scholars and professionals face in collecting and analyzing data from many different countries and regions Blueprint for the Future Framing the Issues of Women in Science in a Global Context summarizes the workshop presentations which provided an opportunity for dialogue about the issues that the authors have been pursuing in their work to date **Encyclopedia of Sustainability** Robin Morris Collin,Robert William

Collin,2009-12-09 This three volume encyclopedia explores the concept of sustainability in the contexts of the environment economics and justice This expansive encyclopedia breaks new ground giving definition and focus to an urgent and much talked about topic that is extraordinarily wide ranging and all too often misunderstood As the first major reference work in its field the three comprehensive volumes span the entire scope of sustainability from ecological concepts to financial concerns to public policy and community action giving readers a solid foundation from which to think critically about efforts to make a more sustainable world The Encyclopedia of Sustainability comprises three volumes each dedicated to one of three equally important contexts in which the term is used environment and ecology business and economics and equity and fairness Each volume provides authoritative but accessible coverage of basic concepts and terms as well as policy initiatives controversies and future trends Volumes also include biographical sketches of important contributors to sustainability efforts from the scientific economic public policy and activist realms plus extensive listings of print and online resources for further exploration

The Environment and Science Christian C. Young,2005-04-25 A fascinating look at the historical relationship between environmental issues and scientific study social attitudes and public policy from the 17th century to the present The Environment and Science Social Impact and Interaction explores the history of how science investigates nature and how those studies both shape and are shaped by the social attitudes philosophies and politics of their times It follows the changes in perceptions of the natural world and humankind's place in it from the European colonization of North America through the Industrial Revolution and westward expansion to the rise of the consumer economy and the recent hardening of the ideological battle lines over environmental policy Coverage includes the emergence of ecology as a science and conservation as a movement the long history of conflicts between business interests and environmentalists and the role of scientific studies in debates over atomic and nuclear power pesticides toxic emissions and other human made sources of environmental degradation

An Exiled Generation Heléna Tóth,2014-10-30 Focusing on migrants from Baden Württemberg and Hungary in four host societies Switzerland the Ottoman Empire England and the United States Heléna Tóth considers exile in the aftermath of the revolutions of 1848-9 as a European phenomenon with global dimensions While exile is often presented as an individual challenge Tóth studies its collective aspects in the realms of the family and of professional and social networks Exploring the interconnectedness of these areas she argues that although we often like to sharply distinguish between labor migration and exile these categories were anything but stable after the revolutions of 1848-9 migration belonged to the personal narrative of the revolution for a broad section of the population Moreover discussions about exile and amnesty played a central role in formulating the legacy of the revolutions not only for the migrants but for their social environment and ultimately the governments of the restoration

Reidy, 2009-10-15

In the first half of the nineteenth century the British sought to master the physical properties of the oceans in the second half they lorded over large portions of the oceans outer rim The dominance of Her Majesty s navy was due in no small part to collaboration between the British Admiralty the maritime community and the scientific elite Together they transformed the vast emptiness of the ocean into an ordered and bounded grid In the process the modern scientist emerged Science itself expanded from a limited and local undertaking receiving parsimonious state support to worldwide and relatively well financed research involving a hierarchy of practitioners Analyzing the economic political social and scientific changes on which the British sailed to power *Tides of History* shows how the British Admiralty collaborated closely not only with scholars such as William Whewell but also with the maritime community sailors local tide table makers dockyard officials and harbor masters in order to systematize knowledge of the world s oceans coasts ports and estuaries As Michael S Reidy points out Britain s security and prosperity as a maritime nation depended on its ability to maneuver through the oceans and dominate coasts and channels The practice of science and the rise of the scientist became inextricably linked to the process of European expansion

Explorations in the Icy North Nanna Katrine Lüders Kaalund, 2021-05-11 Science in the Arctic changed dramatically over the course of the nineteenth century when early scattered attempts in the region to gather knowledge about all aspects of the natural world transitioned to a more unified Arctic science under the First International Polar Year in 1882 The IPY brought together researchers from multiple countries with the aim of undertaking systematic and coordinated experiments and observations in the Arctic and Antarctic Harsh conditions intense isolation and acute danger inevitably impacted the making and communicating of scientific knowledge At the same time changes in ideas about what it meant to be an authoritative observer of natural phenomena were linked to tensions in imperial ambitions national identities and international collaborations of the IPY Through a focused study of travel narratives in the British Danish Canadian and

American contexts Nanna Katrine Lders Kaalund uncovers not only the transnational nature of Arctic exploration but also how the publication and reception of literature about it shaped an extreme environment its explorers and their scientific practices She reveals how far beyond the metropole in the vast area we understand today as the North American and Greenlandic Arctic explorations and the narratives that followed ultimately influenced the production of field science in the nineteenth century

Scientific Imperialism Uskali Mäki, Adrian Walsh, Manuela Fernández Pinto, 2017-10-16 The growing body of research on interdisciplinarity has encouraged a more in-depth analysis of the relations that hold among academic disciplines In particular the incursion of one scientific discipline into another discipline's traditional domain also known as scientific imperialism has been a matter of increasing debate Following this trend Scientific Imperialism aims to bring together philosophers of science and historians of science interested in the topic of scientific imperialism and in particular interested in the conceptual clarification empirical identification and normative assessment of the idea of scientific imperialism Thus this innovative volume has two main goals Indeed the authors first seek to understand interdisciplinary relations emerging from the incursion of one scientific discipline into one or more other disciplines such as in cases in which the conventions and procedures of one discipline or field are imposed on other fields or more weakly when a scientific discipline seeks to explain phenomena that are traditionally considered proper of

another discipline's domain. Secondly, the authors explore ways of distinguishing imperialistic from non-imperialistic interactions between disciplines and research fields. The first sustained study of scientific imperialism, this volume will appeal to postgraduate students and postdoctoral researchers interested in fields such as Science and Technology Studies, Sociology of Science, Technology, Philosophy of Science, and History of Science. *Незападная история науки: Открытия, о которых мы не знали* Джеймс Поскетт, 2024-07-05
