Genomic characterization of animal genetic resources Food and Agriculture Organization of the United Nations, Ajmone-Marsan, P., Boettcher, P. J., Ginja, C., Kantanen J., Lenstra, J.A., 2023-01-12 Molecular biotechnologies have developed rapidly and substantially since the release of these previous guidelines The livestock sector has been an active participant in the so called genomic revolution Advancements in the sequencing of genomes and related genotyping methods have created opportunities for gathering much more information on the molecular level than ever possible at a faster rate and for exponentially decreased costs Scientists and other livestock stakeholders in countries with highly developed economies have been among the main beneficiaries of this revolution However the greatly decreased costs of genomic applications have also created opportunities in countries with developing and transitional economies In many instances the lack of awareness of these opportunities and in the technical capacity for the full application of genomic tools may represent a greater obstacle to their utilization than the expenses involved The development of these guidelines and the subsequent application of the information contained herein may help to bridge this gap bringing new opportunities to light and transferring knowledge that can be used to increase the genetic characterization of AnGR and subsequently improve the sustainable use and conservation of livestock genetic diversity

Responsible use of antimicrobials in beekeeping Food and Agriculture Organization of the United Nations, 2021-10-13 These guidelines focus on responsible use of antimicrobials in sustainable apiculture Following a one health approach they aim to protect not only honey bees but even human health e g reducing the risks of residues in hive products and preventing development of antimicrobial resistance and the environment The best way to reach this goal is to prevent and to guarantee the early detection of clinical cases of the main honey bee diseases through the application of good beekeeping practices and biosecurity measures And when medicines are needed for the honey bees specific indication is provided to reduce their impact choosing medicines with a low environmental impact using them timely prudently and following the due instructions It is imperative to apply only those active ingredients that are

registered for the honey bees and that are ideally prescribed by a veterinarian Antibiotics should always be avoided as much as possible to reduce risks of residues in hive products and to prevent risks of antimicrobial resistance Prudent and limited use of antimicrobials in beekeeping benefits the quality of bee products and the safety of surrounding ecosystems while also slowing development of antimicrobial resistance which is a widespread issue affecting multiple sectors Finally in this document for the first time a progressive management pathway PMP has been devised for honey bees as well as surveys were created to assess current beekeeping practices and general awareness of topical issues such as AMR The overall aim of these guidelines is to provide information of current challenges within the sector and orientate towards sustainable production and honey bee colony health

Rift Valley fever action framework Mariner, J.C., Raizman, E., Pittiglio, C., Bebay, C., Kivaria, F., Lubroth, J., Makonnen, Y., 2022-04-04 Rift Valley fever RVF is an arboviral disease affecting humans and livestock transmitted by mosquitoes It is endemic to large areas of Africa resulting in widespread abortion and neonatal mortality in livestock and severe complications in a small but significant percentage of human cases The range of RVF is largely determined by the distribution of suitable vector habitat and rainfall which changes over time and as a result of climate change In addition to which the movement of animals and animal products for trade may lead to the spread of RVF to previously non infected areas This RVF Action Framework is intended to provide decision makers with guidance on the best course of action to take in response to an RVF outbreak or the risk of an outbreak and help them develop a national action plan for this response A coordinated One Health approach that brings together the public animal and environmental health sectors is recommended as is a risk based approach that uses risk assessment and mapping to determine the appropriate measures to be taken and the locations where they are required A country's RVF response can

be best broken down into the four phases of the epidemiological cycle the inter epidemic pre epidemic epidemic and post epidemic periods Surveillance risk assessment and capacity building for instance are key during the inter epidemic period while the focus during the post epidemic period shifts to mitigating the disease s impact
