Dynamics and Control of Switched Electronic Systems Francesco Vasca, Luigi Iannelli, 2012-03-28 The increased efficiency and quality constraints imposed on electrical energy systems have inspired a renewed research interest in the study of formal approaches to the analysis and control of power electronics converters Switched systems represent a useful framework for modeling these converters and the peculiarities of their operating conditions and control goals justify the specific classification of switched electronic systems Indeed idealized switched models of power converters introduce problems not commonly encountered when analyzing generic switched models or non switched electrical networks In that sense the analysis of switched electronic systems represents a source for new ideas and benchmarks for switched and hybrid systems generally Dynamics and Control of Switched Electronic Systems draws on the expertise of an international group of expert contributors to give an overview of recent advances in the modeling simulation and control of switched electronic systems The reader is provided with a well organized source of references and a mathematically based report of the state of the art in analysis and design techniques for switched power converters Intuitive language realistic illustrative examples and numerical simulations help the reader to come to grips with the rigorous presentation of many promising directions of research such as converter topologies and modulation techniques continuous time discrete time and hybrid models modern

control strategies for power converters and challenges in numerical simulation The guidance and information imparted in this text will be appreciated by engineers and applied mathematicians working on system and circuit theory control systems development and electronic and energy conversion systems design

Republic of Estonia International Monetary Fund. European Dept., 2020-01-22 This Selected Issues paper on Estonia examines impact of assessing competitiveness and exposure to shocks integrating global value chains GVCs This paper strengthens the analytical underpinnings of competitiveness assessments and exposure to shocks by incorporating GVCs Standard real effective exchange rates REER indexes assume trade is only in final goods However like most European economies Estonia is highly integrated into GVCs This implies that assessments of competitiveness should consider trade in value added Based on a structural model the paper assesses competitiveness and exposure to trade shocks accounting for the GVC participation in Estonia The analysis using a REER index considering the GVC architecture suggests potential competitiveness problems in Estonia The paper also estimates the impact of overvaluation and appreciation of the GVC related REER measure on value added export and real GDP growth and finds observable effects Further trade tension induced tariff hikes may have important costs for value added produced in Estonia

Republic of Latvia International Monetary Fund. European Dept., 2019-08-07 This Selected Issues paper analyses

the implications of global value chains GVC participation for Latvia's competitiveness and exposure to risks Using a structural model it assesses Latvia's competitiveness through different real effective exchange rate REER measures and examines the main factors behind differences in the measures Based on this analysis the paper suggests policy options to strengthen Latvia's competitiveness The paper also estimates the impact of an appreciation of the GVC related REER measure on value added export growth and real GDP growth and finds sizable effects suggesting that a rapid labor market tightening could lead to erosion in competitiveness and reduction in growth Finally trade tension induced tariff hikes may have significant cost for Latvia especially in terms of value added produced in the country Trade tension induced tariff hikes are likely to have moderate costs for Latvia in terms of value added produced in the country In this regard policies aimed at enhancing product sophistication or quality and export market diversification could mitigate Latvia's exposure to trade shocks in GVCs
