Principles and Practice of Gynecologic Oncology Richard Barakat, Andrew Berchuck, Laurie Markman, Marcus E. Randall, 2013-05-08 Today multidisciplinary approaches to treatment are at the heart of cancer care They offer improved clinical outcomes new possibilities in patient quality of life and enable the development of true innovation in individualized treatment To accurately reflect this modern day approach to cancer care the content of the 6th edition of Principles and Practice of Gynecologic Oncology was written entirely by surgeons medical oncologists radiation oncologists and pathologists New to the editorial team Dr Andrew Berchuck has made significant contributions to the

understanding of the molecular pathogenesis of ovarian and endometrial cancer in the book's content. Every chapter of this book has been either completely rewritten or extensively updated to ensure that everyone involved in treating women with gynecologic cancer will have the most comprehensive and up-to-date information on the subject. **IMRT, IGRT, SBRT** John Meyer, 2007-01-01. New high precision technologies for the planning and delivery of radiotherapy are major advances in cancer treatment. This volume is a comprehensive guidebook to these new technologies and the many clinical treatment programs that bring them into practical use. Advances in intensity modulated radiation therapy (IMRT), 4D and adaptive treatment planning are clearly explained, and the new target localization and image-guided radiotherapy (IGRT) systems are comprehensively reviewed. Clinical tutorials fully illustrate the target definitions for the major cancer sites and techniques for organ motion management are shown. In addition, chapters explore the technical basis for stereotactic body radiotherapy (SBRT) and the latest clinical experience with it for most organ sites. **A Practical Guide to MR-Linac** Indra J. Das, Filippo Alongi, Poonam Yadav, Bharat B. Mittal, 2024-03-20. This book offers a detailed guide to MR-Linac, a unique and fast-growing radiation treatment modality. MR-Linac is a new technology that is a fusion of an MRI and a linear accelerator on the same gantry. It can change both target volume delineation and tumor visualization in real time using MR cine images and treatment. Tumor location changes moment to moment as radiation is delivered, but this cannot be visualized in current radiation therapy practices. This new and rapidly growing technology can provide adaptive therapy that was not possible before. This book presents current knowledge on MR-Linac technology, clinical practices, and ultimately patient outcome where dose escalation is not possible due to limiting normal tissue structures in the vicinity of tumor. There are two commercial MR-Linac machines under consideration, and both will be covered in detail. The book is divided into four sections. The first gives a general introduction to MR-Linac, covering the role of MRI in radiation oncology, the clinical necessity of this technology, and patient selection. The next section details the physics and technology of MR-Linac, covering image sequence, motion management, and treatment planning. Section three offers the clinical applications of MR-Linac and is divided by body area, including lung, prostate, and breast. Finally, the fourth section looks to the future and what this technology can mean for radiation oncology. This is an ideal guide for radiation oncologists, medical physicists, and relevant trainees. **Handbook of Radiotherapy Physics** Philip Mayles, Alan E. Nahum, J.C. Rosenwald, 2021-12-30.
