Landslide Recognition Identification Movement And Causes:

Landslide Hazard and Risk Thomas Glade, Malcolm G. Anderson, Michael J. Crozier, 2006-01-04 With the increasing need to take an holistic view of landslide hazard and risk this book overviews the concept of risk research and addresses the sociological and psychological issues resulting from landslides Its integrated approach offers understanding and ability for concerned organisations landowners land managers insurance companies and researchers to develop risk management solutions Global case studies illustrate a variety of integrated approaches and a concluding section provides specifications and contexts for the next generation of process models

Landslide Recognition Richard Dikau, 1996-08-06 Every year a landslide disaster occurs somewhere in Europe Destructive events are fortunately infrequent but when they do occur they are often tragic in their effects Europe is heavily populated and development is expanding into areas where natural events are more likely to happen *Landslide Recognition* is written by specialists from several European institutions and is designed to portray the diagnostic features of landslides as they would appear in the field on maps or in photographs Brief descriptions are provided and some guidance is given in the area in which different landslide types might be expected This book will assist planners developers engineers and earth scientists to recognise where a problem may exist and to diagnose what type of failure may occur The correct investigations and remedial measures may then be applied

Landslides J. Rybar, J. Stemberk, P. Wagner, 2018-05-02 The proceedings contain five invited lectures and 99 papers relevant to landslide occurrence and problems from Europe Asia America Africa and Australia and New Zealand The five special invited lectures deal with a variety of important aspects of landslides

Landslide Analysis and Early Warning Systems Benni Thiebes, 2012-01-20 Recent landslide events demonstrate the need to improve landslide forecasting and early warning capabilities in order to reduce related risks and protect human lives In this thesis local and regional investigations were carried out to analyse landslide characteristics in the Swabian Alb region and to develop prototypic landslide early warning systems In the local study area an extensive hydrological and slope movement monitoring system was installed on a seasonally reactivated landslide body located in Lichtenstein Unterhausen Monitoring data was analysed to assess the influence of rainfall and snow melt on groundwater conditions and the initiation of slope movements The coupled hydrology slope stability model CHASM was applied to detect areas most prone to slope failures and to simulate slope stability using a variety of input data Subsequently CHASM was refined and two web based applications were developed a technical early warning system to constantly simulate slope stability integrating rainfall measurements hydrological monitoring data and weather forecasts and a decision support system allowing for quick calculation of stability for freely selectable slope profiles On the regional scale available landslide inventory data were analysed for their use in evaluation of rainfall thresholds proposed in other studies Adequate landslide events were selected and their triggering rainfall and snow melting conditions were compared to intensity duration and cumulative thresholds Based on the results a regional landslide early warning

system was developed and implemented as a webbased application Both the local and the regional landslide early warning systems are part of a holistic and integrative early warning chain developed by the ILEWS project and could easily be transferred to other landslide prone areas

Slope Stability and Erosion Control: Ecotechnological Solutions Joanne E. Norris,Alexia Stokes,Slobodan B. Mickovski,Erik Cammeraat,Rens van Beek,Bruce C. Nicoll,Alexis Achim,2008-02-29 This chapter describes the processes involved in the transport of material over hillslopes Hillslopes provide the gradients enabling material to be transported from the slopes themselves towards the valley bottoms directly by gravity alone or by water flowing down over the surface Gravity has the potential to transfer material downslope if the material resistance to counteract it is insufficient Similarly water and wind flowing along the surface exert a drag on soil particles and have the potential to entrain material After the gradient has fallen below a critical threshold to keep the material in transport deposition occurs Conventionally slope processes in which gravity alone is the dominant transporting agent are called mass movements Brunsden 1984 Processes in which other agents dominate are called erosion e g wind or water erosion Flowing water is an important transporting agent on which the emphasis is placed here Although mass wasting is a natural process its incidence and impact may be exacerbated by human activities Crozier 1986 Morgan 2005 A situation may ultimately arise in which human interests become unsafe or unsustainable This impact is not only directly felt in the areas where material is removed or deposited and indirectly mass wasting may have an effect on soil and water quality in areas located further downstream In the following sections a brief overview is given of the mechanisms morphology causes and consequences of mass movements and erosion

Statistical Approaches for Landslide Susceptibility Assessment and Prediction Sujit Mandal,Subrata Mondal,2018-09-03 This book focuses on the spatial distribution of landslide hazards of the Darjeeling Himalayas Knowledge driven methods and statistical techniques such as frequency ratio model FRM information value model IVM logistic regression model LRM index overlay model IOM certainty factor model CFM analytical hierarchy process AHP artificial neural network model ANN and fuzzy logic have been adopted to identify landslide susceptibility In addition a comparison between various statistical models were made using success rate curve SRC and it was found that artificial neural network model ANN certainty factor model CFM and frequency ratio based fuzzy logic approach are the most reliable statistical techniques in the assessment and prediction of landslide susceptibility in the Darjeeling Himalayas The study identified very high high moderate low and very low landslide susceptibility locations to take site specific management options as well as to ensure developmental activities in the Darjeeling Himalayas Particular attention is given to the assessment of various geomorphic geotectonic and geohydrologic attributes that help to understand the role of different factors and corresponding classes in landslides to apply different models and to monitor and predict landslides The use of various statistical and physical models to estimate landslide susceptibility is also discussed The causes mechanisms and types of landslides and their destructive character are elaborated in the book Researchers interested in applying statistical tools for hazard zonation

purposes will find the book appealing Landslide Databases as Tools for Integrated Assessment of Landslide Risk Martin Klose, 2015-06-24 This doctoral thesis presents a novel approach to landslide risk assessment that explores the various dimensions of landslide risk in an integrated perspective The research approach introduced here is tailored for use with landslide databases and Geographic Information Systems GIS A landslide susceptibility model is at the heart of this new approach enabling to identify and delineate areas at risk of landslides and to assess infrastructure exposure Landslide risk is a pressing societal issue that is still poorly understood Temporal landslide hazard is derived from landslide frequency statistics and a hydrological simulation approach to estimate triggering thresholds These methods are integrated into a powerful toolset for cost modeling that uses historical data to compile model and extrapolate damage costs on different spatial scales over time The combination of this toolset with techniques to analyze fiscal cost impacts supports integrated risk assessment by quantifying the economic relevance of landslide losses
