Luigi Moretti Roberto Podda, 2024-08-01 Luigi Moretti Lessons of SPAZIO focuses on the theoretical work of the Italian architect Luigi Moretti Rome 1906 1973 It does so selectively focusing on the editorials he published between 1950 and 1953 as editor in chief of the magazine SPAZIO as well as a further essay on parametric architecture published in 1971 1972 in the first issue of the magazine MOEBIUS directed by his friend Giulio Roiseco This book rediscovers Moretti s personal impact

on international architectural theory through thoughtful comments that shed light on the architect's modernity and original approach. Although Moretti is an architect renowned for his projects and buildings, his theoretical essays are less well known. The aim of this book is therefore to explore Moretti's theoretical work, which covers many topics including pictorial art, sculpture, architecture, urban planning, music, cinema, poetry, mathematics, computer science, and parametricity. In addition to the translation from Italian to English, the book contains reproductions of the original articles accompanied by a series of essays of critical commentary and updated interpretations that show new ways of approaching reading and understanding the foundations of current architectural theory and its progress over the last 50 years. This book approaches Moretti's thought from a new perspective with the aim of reconsidering the originality of this brilliant and visionary architect who was intellectually ostracised for many years due to political and ideological contingencies, even though he personified the ideal of the Renaissance man in modern times. A re-reading of Moretti's work is more justified today than has ever been before, both to reconnect the threads with contemporaneity and to make his intensity and farsightedness of vision known to researchers, teachers, and students working in the areas of architecture and design theory, technology, and art today.

Historic Zuni Architecture and Society Thomas John Ferguson, 1996-03. A unique approach to the Zuni Pueblo's history applying the architectural method of space syntax, linking the structure of Zuni society to the structure of the architecture housing it. Drawing heavily on archeological findings, the volume nonetheless disputes the traditional archeological theory of population change as a basis for the changes in Zuni society but does not offer any clear theories of its own. However, Ferguson, adjunct curator of archeology, Arizona State U, does create a vivid historical architectural analysis of the Zuni culture, society, and social and architectural structure from 1540 to the 1980s. Includes numerous diagrams, illustrations, and photographs.

Shape Grammar and Space Syntax Approach in Contextual Design Neeta Lambe, 2024-02-06. The book is an attempt to present a logical approach to contextual design. With a lot of buzz around sustainability, architects analyze contexts in detail to propose sustainable designs. Hence, the contextual design approach is gaining importance in architectural practice. Architects and designers are always inclined to adopt an intuitive approach to design in historical contexts or surroundings with peculiar characteristics. There is no specific methodical approach to design in such contexts apart from the ability to identify cues from the surrounding through experience. This book presents a sequential framework wherein one can analyze, synthesize, and generate design genotypes based on the inbuilt spatial grammar of the context. The shape grammar concept as a generative tool is presented to identify the spatial construct's grammar, which acts as a cue for design genotypes. Space syntax is explored as an analysis tool to evaluate the sympathetic spatial fitness of generated design genotypes. The book establishes that the framework is logical in its methodical approach and would generate design genotypes which would help architects and designers have design interventions in in-fill development to achieve congruence with the surrounding environment.

Space and Language in Architectural Education Kasia Nawratek, 2022-05-02. Architects habitually

disregard disciplinary boundaries of their profession in search for synergies and inspiration The realm of language although not considered to be architects natural environment opens opportunities to further stretch and expand the architectural imagination and the set of tools used in the design process When used in the context of architectural pedagogy the exploration of the relationship between space and language opens the discussion further to include the reflection on the design studio structure the learning process in creative subjects and the ethical dimension of architectural education This book offers a glimpse into architectural pedagogies exploring the relationship between space and language using literary methods and linguistic experiments The examples discuss a wide range of approaches from international perspective exploring opportunities and challenges of engaging literary methods and linguistic experiments in architectural education The theme of Catalysts discusses the use of literary methods in architectural pedagogy where literary texts are used to jumpstart and support the design process resulting in deeply contextual approaches capable of subverting embedded hierarchies of the design studio Tensions explore the gap between the world and its description employing linguistic experiments and literary methods to enrich and expand the architectural vocabulary to include the experience of space in its infinite complexity This book will be useful for innovators in architectural education and those seeking to expand their teaching practice to incorporate literary methods and to creatives interested in making teaching a part of their practice It may also appeal to students from design based disciplines with an established design studio culture demonstrating how to use narrative poetry and literature to expand and feed your imagination

Contagious Architecture Luciana Parisi,2022-11-01 A proposal that algorithms are not simply instructions to be performed but thinking entities that construct digital spatio temporalities In Contagious Architecture Luciana Parisi offers a philosophical inquiry into the status of the algorithm in architectural and interaction design Her thesis is that algorithmic computation is not simply an abstract mathematical tool but constitutes a mode of thought in its own right in that its operation extends into forms of abstraction that lie beyond direct human cognition and control These include modes of infinity contingency and indeterminacy as well as uncomputable quantities underlying the iterative process of algorithmic processing The main philosophical source for the project is Alfred North Whitehead whose process philosophy is specifically designed to provide a vocabulary for modes of thought exhibiting various degrees of autonomy from human agency even as they are mobilized by it Because algorithmic processing lies at the heart of the design practices now reshaping our world from the physical spaces of our built environment to the networked spaces of digital culture the nature of algorithmic thought is a topic of pressing importance that reraises questions of control and ultimately power Contagious Architecture revisits cybernetic theories of control and information theory s notion of the uncomputable in light of this rethinking of the role of algorithmic thought Informed by recent debates in political and cultural theory around the changing landscape of power it links the nature of abstraction to a new theory of power adequate to the complexities of the digital world

Architecture and Spatial Culture John Peponis,2024-03-19 Built space supports our daily habits and our membership

of communities organizations institutions or social formations Architecture and Spatial Culture argues that architecture matters because it makes the settings of our life intelligible so that we can sustain or creatively transform them As technological and social innovations allow us to overcome spatial constraints to communication cooperation and exchange so the architecture of embodied experience reflects independent cultural choices and human values The analysis of a wealth of examples from urban environments to workplaces and museums shows that built space functions pedagogically inducing us to specific ways of seeing understanding and feeling and supporting distinct patterns of cooperation and life in common Architecture and Spatial Culture is about the principles that underpin the design and inhabitation of space It also serves as an introduction to Space Syntax a descriptive theory used to model the human functions of layouts Thus it addresses architects students of architecture and all those working in disciplines that engage the design of the built environment and its social effects

The Semantics of Dynamic Space in French Michel Aurnague, Dejan Stosic, 2019-07-29 Research on the semantics of spatial markers in French is known mainly through Vandeloise's 1986 1991 work on static prepositions However interest in the expression of space in French goes back to the mid 1970s and focused first on verbs denoting changes in space whose syntactic properties were related to specific semantic distinctions such as the opposition between movement and displacement This volume provides an overview of recent studies on the semantics of dynamic space in French and addresses important questions about motion expression among which goal bias and asymmetry of motion the status of locative PPs the expression of manner fictive or non actual motion Descriptive experimental and formal or computational analyses are presented providing complementary perspectives on the main issue The volume is intended for researchers and advanced students wishing to learn about both spatial semantics in French and recent debates on the representation of motion events in language and cognition

Exploring Functional-Cognitive Space Christopher S. Butler, Francisco González-García, 2014-08-28 This book intended primarily for researchers and advanced students expands greatly on previous work by the authors exploring the topography of the multidimensional functional cognitive space within which functional cognitive and or constructionist approaches to language can be located The analysis covers a broad range of 16 such approaches with some additional references to Chomskyan minimalism and is based on 58 questionnaire items each rated by 29 experts on particular models for their importance in the model concerned These ratings are analysed statistically to reveal overall patterns of dissimilarity across models The questionnaire ratings and experts comments are then used together with the authors close reading of the literature in detailed discussion leading to a final dichotomous rating for each feature in each model the results again being analysed statistically The final chapter presents the overall conclusions and suggests how existing collaborations between approaches could be strengthened and new ones created in future research Exploring Functional Cognitive Space has been awarded the 2016 prize of the Spanish Association for Applied Linguistics Asociaci3n Espa3ola de Ling3stica Aplicada AESLA for work by experienced researchers
