Diagrammatic Representation and Inference Gem Stapleton, John Howse, John Lee, 2008-09-10 Diagrams is an international and interdisciplinary conference series covering all aspects of research on the theory and application of diagrams Recent technological advances have enabled the large scale adoption of diagrams in a diverse range of areas Increasingly sophisticated visual representations are emerging and to enable effective communication insight is required into how diagrams are used and when they are appropriate for use The pervasive everyday use of diagrams for communicating information and ideas serves to illustrate the importance of providing a sound understanding of the role that diagrams can and do play Research in the field of diagrams aims to improve our understanding of the role of diagrams sketches and other visualizations in communication computation cognition creative thought and problem solving These concerns have triggered a surge of interest in the study of diagrams The study of diagrammatic communication as a whole must be pursued as an interdisciplinary endeavour Diagrams 2008 was the fifth event in this conference series which was launched in Edinburgh during September 2000 Diagrams attracts a large number of researchers from virtually all related fields placing the conference as a major international event in the area Diagrams is the only conference that provides a united forum for all areas that are concerned with the study of diagrams for example architecture tactical intelligence cartography cognitive science computer science education graphic design history of science human computer interaction linguistics logic mathematics philosophy psychology and software modelling We see issues from all of these fields discussed in the papers collected in the present volume

Answer Set Programming for Continuous Domains: A Fuzzy Logic Approach Jeroen Janssen, Steven Schockaert, Dirk Vermeir, Martine De Cock, 2012-04-26 Answer set programming ASP is a declarative language tailored towards solving combinatorial optimization problems It has been successfully applied to e.g. planning problems configuration and verification of software diagnosis and database repairs However ASP is not directly suitable for modeling problems with continuous domains Such problems occur naturally in diverse fields such as the design of gas and electricity networks computer vision and investment portfolios To overcome this problem we study FASP a combination of ASP with fuzzy logic a class of many-valued logics that can handle continuity We specifically focus on the following issues 1 An important question when modeling continuous optimization problems is how we should handle overconstrained problems i.e. problems that have no solutions In many cases we can opt to accept an imperfect solution i.e. a solution that does not satisfy all the stated rules constraints However this leads to the question what imperfect solutions should we choose We investigate this question and improve upon the state of the art by proposing an approach based on aggregation functions 2 Users of a programming language often want a rich language that is easy to model in However implementers and theoreticians prefer a small language that is easy to implement and reason about We create a bridge between these two desires by proposing a small core language for FASP and by showing that this language is capable of expressing many of its common extensions such as

constraints monotonically decreasing functions aggregators S implicators and classical negation 3 A well known technique for solving ASP consists of translating a program P to a propositional theory whose models exactly correspond to the answer sets of P We show how this technique can be generalized to FASP paving the way to implement efficient fuzzy answer set solvers that can take advantage of existing fuzzy reasoners

The Application of Theorem Proving to Question-answering Systems Claude Cordell Green, 1970 The paper shows how a question answering system can use first order logic as its language and an automatic theorem prover based upon the resolution inference principle as its deductive mechanism The resolution proof procedure is extended to a constructive proof procedure An answer construction algorithm is given whereby the system is able not only to produce yes or no answers but also to find or construct an object satisfying a specified condition A working computer program QA3 based on these ideas is described Methods are presented for solving state transformation problems In addition to question answering the program can do automatic programming control and problem solving for a simple robot pattern recognition and puzzles Author

On Reference Andrea Bianchi, 2015-03-05 Most of the times we open our mouth to communicate we talk about things This can happen because some of the linguistic expressions we use have semantic properties that connect them to extra linguistic entities Thanks to these properties they may be used by us to refer to things Or as we may also say they themselves refer to things though in certain cases they do so only relative to a context of use But how can we characterize the semantic

properties in question What exactly is reference Philosophers have been trying to answer these questions at least since Plato's Cratylus but not until the last century when language occupied center stage in philosophy did the problem come to be felt as really pressing In the last decade of the nineteenth century Gottlob Frege produced an account of reference that set the stage for the contemporary discussion Nevertheless around 1970 a number of powerful arguments against it were produced by Saul Kripke and others As a result many philosophers began to look at reference from a new perspective which highlighted the crucial role played by worldly historical facts that may be unknown to the speakers This semantic revolution however left us with a number of open problems The eighteen original essays collected in this volume deal with many of these problems thus contributing to our understanding of the nature of reference its role in cognition and the place it should be given in semantic theory
