

6. When you are done, save your proof as Proof Conditional 3.
..... Congratulations

The default and generous uses of the biconditional rules are exactly like those for the conditional connective, and **Add Support Steps** works exactly as you would expect.

Exercises

- 8.17 If you skipped any of the **You try it** sections, go back and do them now. Submit the files Proof Conditional 1, Proof Conditional 2, and Proof Conditional 3.

In the following exercises we return to the patterns of inference discussed in Exercise 8.1. Some of these are valid, some invalid. For each valid pattern, construct a formal proof in Fitch. For each invalid pattern, give a counterexample using Tarski's World. To give a counterexample in these cases, you will have to come up with sentences of the blocks language that fit the pattern, and a world that makes those specific premises true and the conclusion false. Submit both the world and the sentence file. In the sentence file, list the premises first and the conclusion last.

- 8.18 **Affirming the Consequent:**
✓ From $A \rightarrow B$ and B , infer A .

- 8.20 **Strengthening the Antecedent:**
✓ From $B \rightarrow C$, infer $(A \wedge B) \rightarrow C$.

- 8.22 **Strengthening the Consequent:**
✓ From $A \rightarrow B$, infer $A \rightarrow (B \wedge C)$.

- 8.24 **Constructive Dilemma:**
✓ From $A \vee B$, $A \rightarrow C$, and $B \rightarrow D$, infer $C \vee D$.

- 8.19 **Modus Tollens:**
✓ From $A \rightarrow B$ and $\neg B$, infer $\neg A$.

- 8.21 **Weakening the Antecedent:**
✓ From $B \rightarrow C$, infer $(A \vee B) \rightarrow C$.

- 8.23 **Weakening the Consequent:**
✓ From $A \rightarrow B$, infer $A \rightarrow (B \vee C)$.

- 8.25 **Transitivity of the Biconditional:**
✓ From $A \leftrightarrow B$ and $B \leftrightarrow C$, infer $A \leftrightarrow C$.

Use Fitch to construct formal proofs for the following arguments. In two cases, you may find yourself re-proving an instance of the law of Excluded Middle, $P \vee \neg P$, in order to complete your proof. If you've forgotten how to do that, look back at your solution to Exercise 6.33. Alternatively, with the permission of your instructor, you may use **Taut Con** to justify an instance of Excluded Middle.

- 8.26
✓ $\vdash P \rightarrow (Q \rightarrow P)$

- 8.27
✓ $\vdash (P \rightarrow (Q \rightarrow R)) \leftrightarrow ((P \wedge Q) \rightarrow R)$

Christian Logic Stephen Wuest, 2024-10-25 This text is about fusing logic and moral theory and is definitely from a Christian worldview It is written on a level for AP high school or at most second year college use But the text is for Christian laypeople The goals of this book include presenting modern deductive logic modern logical notation and the twenty rules of inference These describe what modern deductive logic is However orthodox Christians must go further they must be exposed to historical moral ethical ME models And they must think carefully about how to integrate Christian morality into modern logic and use this fusion to have a sound methodology to analyze modern arguments Given the popularity of logically incoherent conspiracy theories this approach to formal logic enters through the door of what historical Christians would call roughly our shared reality Also given the abundance of partial or invalid or unsound arguments that Americans encounter the analysis of arguments in this book will heavily deal with dysfunctional arguments Putting these topics together in a synthesized way in a Christian worldview results in a product that reasons across disciplines and is perhaps politically incorrect But the author is convinced that this combination of skills is what American Christians need **Automated**

Language Norbert E Fuchs, 2010-07-06 Controlled natural languages CNLs are subsets of natural languages obtained by restricting the grammar and vocabulary in order to reduce or eliminate ambiguity and complexity Traditionally controlled languages fall into two major types those that provide readability for human readers and those that enable reliable automatic semantic analysis of the language The second type of languages has a formal logical basis i.e. they have a formal syntax and semantics and can be mapped to an existing formal language such as first order logic Thus those languages can be used as knowledge representation languages and writing of those languages is supported by fully automatic consistency and redundancy checks query answering etc Wikipedia Various controlled natural languages of the second type have been developed by a number of organizations and have been used in many different application domains most recently within the Semantic Web The workshop CNL 2009 was dedicated to discussing the similarities and the differences of existing controlled natural languages of the second type possible improvements to these languages relations to other knowledge representation languages tool support existing and future applications and further topics of interest **On the Logic and Learning of**

Language Sean A. Fulop, 2004-10-14 This book presents the author's research on automatic learning procedures for categorial grammars of natural languages The research program spans a number of intertwined disciplines including syntax

semantics learnability theory logic and computer science The theoretical framework employed is an extension of categorial grammar that has come to be called multimodal or type logical grammar The first part of the book presents an expository summary of how grammatical sentences of any language can be deduced with a specially designed logical calculus that treats syntactic categories as its formulae Some such Universal Type Logic is posited to underlie the human language faculty and all linguistic variation is captured by the different systems of semantic and syntactic categories which are assigned in the lexicons of different languages The remainder of the book is devoted to the explicit formal development of computer algorithms which can learn the lexicons of type logical grammars from learning samples of annotated sentences The annotations consist of semantic terms expressed in the lambda calculus and may also include an unlabeled tree structuring over the sentence The major features of the research include the following We show how the assumption of a universal linguistic component the logic of language is not incompatible with the conviction that every language needs a different system of syntactic and semantic categories for its proper description The supposedly universal linguistic categories descending from antiquity noun verb etc are summarily discarded Languages are here modeled as consisting primarily of sentence trees labeled with semantic structures a new mathematical class of such term labeled tree languages is developed which cross cuts the well known Chomsky hierarchy and provides a formal restrictive condition on the nature of human languages The human language acquisition mechanism is postulated to be biased such that it assumes all input language samples are drawn from the above syntactically homogeneous class in this way the universal features of human languages arise not just from the innate logic of language but also from the innate biases which govern language learning This project represents the first complete explicit attempt to model the acquisition of human language since Steve Pinker's groundbreaking 1984 publication *Language Learnability and Language Development* *Logical Dynamics of Information and Interaction* Johan van Benthem, 2011-09-29 This book develops a view of logic as a theory of information driven agency and intelligent interaction between many agents with conversation argumentation and games as guiding examples It provides one uniform account of dynamic logics for acts of inference observation questions and communication that can handle both update of knowledge and revision of beliefs It then extends the dynamic style of analysis to include changing preferences and goals temporal processes group action and strategic interaction in games Throughout the book develops a mathematical theory unifying all these systems and positioning them at the interface of logic philosophy computer science and game theory A series of further chapters explores repercussions of the dynamic stance for these areas as well as cognitive science

Introduction to Logic Jess Drake, 2018-05-30 Logic originally meaning the word or what is spoken is generally held to consist of the systematic study of the form of arguments A valid argument is one where there is a specific relation of logical support between the assumptions of the argument and its conclusion There is no universal agreement as to the exact scope and subject matter of logic but it has traditionally included the classification of arguments the systematic exposition of

the logical form common to all valid arguments the study of inference including fallacies and the study of semantics including paradoxes Historically logic has been studied in philosophy and mathematics and recently logic has been studied in computer science linguistics psychology and other fields The book is about the logic and talks about various aspects of it such as general character of the enquiry argument from analogy mathematical reasoning etc This book will prove to be very useful for the people interested in logic as well as the students of logic
