Great Projects For Scientific Collaboration East-west-north-south, The - 7th International Seminar On Nuclear War Antonino Zichichi,Mauro D Dardo,1992-08-29 In this book some 50 papers published by K A M ller as author or co author over several decades amplified by more recent work mainly by T W Kool with collaborators are reproduced The main subject is Electron Paramagnetic Resonance EPR applied to the study of perovskites and other oxides with related subjects This wealth of papers is organized into eleven chapters each with an introductory text written in the light of current understanding The contributions of the first editor on structural phase transitions have been immense and because K A M ller and J C Fayet have published a review paper on the subject the latter is reproduced in chapter VII Not related to EPR is a part of chapter VIII on the dipolar and quantum paraelectric behavior with dielectric studies In chapter X two papers proving

the existence of Fermi glasses are reproduced The year 1986 bears some significance early in this year the paper by Bednorz and Müller on the possible observation of superconductivity was published This resulted in a substantial shift in the paradigm of condensed matter physics to which the present first editor has contributed scientifically with others and which will be reviewed in a second volume Two-dimensional Strongly Correlated Electronic Systems China Center of Advanced Science and Technology, 1989 This book addresses present problems and looks towards the future development of new ideas in the field The series of lectures places emphasis on the theoretical development of high T_c superconducting oxide materials Contributions include an introduction to strongly correlated systems the basic concepts of the Mott insulator the fractional quantum Hall effect and a review of the current thoughts on resonating valence bonds Research techniques such as variational Monte Carlo methods mean field theories and topological excitations are also covered The book will be of general interest and value to graduate students and researchers involved in the study of condensed matter theory
