creating drawing documentation This example emphasizes the principles of project management from a single part through designing parts in the context of the assembly checking the basic kinematics of the product and further creating a complete drawing documentation containing item numbers and a parts list as well as an exploding view of the product rendered illustration and video Then thanks to the program parameterization and skillful file management you will quickly create a new version of the drill vise with a complete set of drawing documentation as well as a rendered illustration and video of the new version of the product Example No 2 Component libraries Most of the products being designed use components purchased from external suppliers For this reason parametric 3D models of purchased components which can be quickly inserted into the project instead of modeling each time from scratch offer the greatest possible convenience for the constructor In addition component library files should be properly described so that they are correctly presented in the bill of materials and also it should be placed in the library resources area which will protect them from accidental editing The examples presented here will teach you how to prepare your own parametric libraries of purchased components Example No 3 The parametric generator of product versions In the third example you will create a parametric generator for making a simple metal casing that allows you to obtain a model of any size with or without handles and pre prepared drawing documentation for each version The generated version of the casing can be further modified in order to obtain the final appearance In this example you will learn the basics of designing sheet metal parts the use of parameters in parts and in the assembly and you will learn the basics of programming using iLogic and how to use iLogic parametric version generators And No additional files for download are required to complete the designs described all files will be created from scratch in the exercises in sequence Most of this manual is also compatible with previous versions of Inventor Autodesk® Inventor® 2014 iLogic ASCENT Center for Technical Knowledge,2013 This training guide instructs students in how to use the iLogic functionality that exists in the Autodesk Inventor 2014 software In the practice intensive curriculum students acquire the knowledge needed to use iLogic to automate Autodesk Inventor designs In this training guide you will learn how iLogic functionality furthers the use of parameters in a model by adding an additional layer of intelligence By setting criteria in the form of established rules you learn to capture design intent enabling you to automate the design workflow to meet various design scenarios in part assembly and drawing files The class assumes a mastery of Autodesk Inventor basics The Autodesk Inventor Advanced Part and Assembly Modeling training guides are also highly recommended No programming knowledge is required to use the basic iLogic functions however programming experience can be an asset when using the advanced functions The Humaniverse Guide To Better Reasoning and Decision Making Keith Seland,2020-01-31 Do you know how thinking about the possibility of extraterrestrial life can help make better decisions in your everyday life The answer to this question will be the first of many that enlighten you and is found in the Introduction to The Humaniverse Guide to Better Reasoning and Decision Making Every person has to reconcile how to solve the many problems that arise daily in their lives
