The Colour Image Processing Handbook Stephen J. Sangwine, Robin E.N. Horne, 2012-12-06 This book is aimed at those using colour image processing or researching new applications or techniques of colour image processing It has been clear for some time that there is a need for a text dedicated to colour We foresee a great increase in the use of colour over the coming years both in research and in industrial and commercial applications We are sure this book will prove a useful reference text on the subject for practicing engineers and scientists for researchers and for students at doctoral and perhaps masters level It is not intended as an introductory text on image processing rather it assumes that the reader is already familiar with basic image processing concepts such as image representation in digital form linear and non linear filtering transforms edge detection and segmentation and so on and has some experience with using at the least monochrome equipment There are many books covering these topics and some of them are referenced in the text where appropriate The book covers a restricted but nevertheless a very important subset of image processing concerned with natural colour that is colour as perceived by the human visual system This is an important field because it shares much technology and basic theory with colour television and video equipment the market for which is worldwide and very large and with the growing field of multimedia including the use of colour images on the Internet
