Harvey,Druti Shah,2012-12-06 This book contains papers presented at the Noblesse Workshop on Non linear model based image analysis held in Glasgow 1 3 July 1998 Current models have mainly been developed for image coding purposes They are rather simple and far away from being optimal and do not contribute to more complex tasks like those needed in image databases This book meets the challenging tasks in multimedia applications by discussing new sophisticated model based schemes for a high level description of images and image sequences Novel results are covered in the papers presented in this book opening new potential fields of application like the support for building databases in multimedia applications image archiving and image sequence coding including such topics as 3D Image Models Image Video Restoration Segmentation and Object Oriented Coding Colour Image Processing Database Retrieval Image Models Video Pre and Post processing **Image Processing in Radiation Therapy** Kristy K. Brock,2016-04-19 Images from CT MRI PET and other medical instrumentation have become central to the radiotherapy process in the past two decades thus requiring medical physicists clinicians dosimetrists radiation therapists and trainees to integrate and segment these images efficiently and accurately in a clinical environment Image Processing in Radiation Biomedical Image Analysis and Machine Learning Technologies: Applications and Techniques Gonzalez, Fabio A.,Romero, Eduardo,2009-12-31 Medical images are at the base of many routine clinical decisions and their influence continues to increase in many fields of medicine Since the last decade computers have become an invaluable tool for supporting medical image acquisition processing organization and analysis Biomedical Image Analysis and Machine Learning Technologies Applications and Techniques provides a panorama of the current boundary between biomedical complexity coming from the medical image context and the multiple techniques which have been used for solving many of these problems This innovative publication serves as a leading industry reference as well as a source of creative ideas for applications of medical issues **Mathematical Methods for Signal and Image Analysis and Representation** Luc Florack,Remco Duits,Geurt Jongbloed,Marie-Colette van Lieshout,Laurie Davies,2012-01-12 Mathematical Methods for Signal and Image Analysis and Representation presents the mathematical methodology for generic image analysis tasks In the

context of this book an image may be any m dimensional empirical signal living on an n dimensional smooth manifold typically but not necessarily a subset of spacetime The existing literature on image methodology is rather scattered and often limited to either a deterministic or a statistical point of view In contrast this book brings together these seemingly different points of view in order to stress their conceptual relations and formal analogies Furthermore it does not focus on specific applications although some are detailed for the sake of illustration but on the methodological frameworks on which such applications are built making it an ideal companion for those seeking a rigorous methodological basis for specific algorithms as well as for those interested in the fundamental methodology per se Covering many topics at the forefront of current research including anisotropic diffusion filtering of tensor fields this book will be of particular interest to graduate and postgraduate students and researchers in the fields of computer vision medical imaging and visual perception
