## **Impossibility The Limits Of Science And The Science Of Limits:**

**Impossibility** John D. Barrow, 1999 Astronomer John Barrow takes an intriguing look at the limits of science who argues that there are things that are ultimately unknowable undoable or unreachable Impossibility John D. Barrow, 2023 In *Impossibility* John D Barrow one of our most elegant and accomplished science writers argues convincingly that there are limits to human discovery that there are things that are ultimately unknowable undoable or unreachable Barrow first examines the limits of the human mind our brain evolved to meet the demands of our immediate environment and much that lies outside this small circle may also lie outside our understanding He investigates practical impossibilities such as those imposed by complexity uncomputability or the finiteness of time space and resources Is the universe finite or infinite Can information be transmitted faster than the speed of light The book also examines deeper theoretical restrictions on our ability to know including Godel's theorem which proved that there were things that could not be proved *Impossibility : The Limits of Science and the Science of Limits* John D. Barrow, 1998-03-12 Are there some things we can never think or know let alone do In this fascinating book acclaimed author John Barrow reveals the often paradoxical limits on knowledge and achievement and shows that the notion of impossibility has played and continues to play a striking role in our thinking and in the way in which we understand the universe and ourselves What are the true limits of science and human endeavour The end of each century leads to a stocktaking of human achievement and our expectation about the future This new book by John D Barrow looks at what limits there might be to human discovery and what we might find ultimately to be unknowable undoable or unthinkable Weaving together a tapestry of surprises Barrow explores the frontiers of knowledge taking in surrealism impossible figures time travel paradoxes of logic and perspective theological speculations about Beings for whom nothing is impossible all stimulate us to contemplate something more than what is With sufficient time and money at our disposal why should we find anything impossible Barrow explores the limits that may be imposed upon a full understanding of the physical Universe by constraints of technology computes cost and complexity He considers how the nature of the universe's structure prevents us from answering the deepest questions about its beginning its structure and its future And he delves into the deep limits imposed by the nature of knowledge itself which have profound implications for any quest for complete knowledge They take us into the debates over the problems of free will and consciousness Godel's famous theorem about our inability to capture the truths of mathematics by rules and axioms is explored to see if it has any implications for science Clearly and engagingly written and using simple explanations this book reveals that impossibility is a deep and powerful notion that any Universe complex enough to contain conscious beings will contain limits on what those beings can know about their Universe that what we cannot know defines reality as surely as what we can know *Impossibility* is a two edged sword it threatens the completeness of the scientific enterprise yet without it there would be no laws of Nature no science and no scientists In this illuminating well written account of Limits with capital L John D Barrow

chronicles and explains the limits of science as a reality generation mechanism and why it matters So for about as good an account as you're going to get of where science stops read this book It won't tell you any final answer But the journey is far more interesting and important than the destination Nature

**The Limits of Technology and the End of History** Yefim Kats, 2024-10-12 This book examines the long standing belief in infinite scientific and technological progress and links it to the Enlightenment ideal of man as a universal being and subject of the universal world history destined to become a master and possessor of nature The author analyzes a broad range of issues in epistemology the philosophy of history and the philosophy of science and technology Marx's philosophy is explored to the extent that his dialectic of labor sheds light on Western technological optimism and the ideal of human universality and offers an elaborate framework for analyzing the intrinsic limits to technological progress The focus is on his early works providing a theoretical and humanistic underbelly for the mature ideas of the Capital Examining the epistemic foundations of the belief in infinite progress the author argues that actual infinity either in the form of unbounded technological scientific expansion or infinite complexity of nature is redundant for the universality of man his scientific pursuit and historical experience The conundrum of universality and power calls for a systematic critique of instrumental reason its practical applicability and value structure

*Toward a Theology of Scientific Endeavour* Professor Christopher B Kaiser, 2013-05-28 Foundations of science are specific conditions of the cosmos of human intelligence of cultural beliefs and of technological structures that make the pursuit of modern science possible Each of the four foundations of scientific endeavour can be studied as a topic on its own The concurrent study of all four together reveals several tensions and interconnections among them that point the way to a greater unification of faith and science This book explores four foundations of scientific endeavour and investigates some of the paradoxes each of them raises Kaiser shows that the resolution of these paradoxes inevitably leads us into theological discourse and raises new challenges for theological endeavour In order to address these challenges Kaiser draws on the wider resources of the Judeo Christian tradition and argues for a refocusing of contemporary theology from the perspective of natural science

### **The Limits of Science** Wenceslao J.

Gonzalez,2016-10-05 The problem of the limits of science is twofold First there is the problem of demarcation i.e the boundaries or barriers between what is science and what is not science Second there is the problem of the ceiling of scientific activity which leads to the confines of this human enterprise These two faces of the problem of the limits the barriers and the confines of science require a new analysis which is the task of this book The authors take into account the Kantian roots but they are focused on the current stage of the philosophical and methodological analyses of science This vision looks to supersede the Kantian approach in order to reach a richer conception of science
