Marilyn A. Nippold, Cheryl M. Scott, 2013-03-07 School success in the 21st century requires proficiency with expository discourse, the use and understanding of informative language in spoken and written modalities. This occurs, for example, when high school students read their textbooks and listen to their teachers' lectures and later are asked to demonstrate their knowledge of this complex topic through oral reports and essay examinations. Although many students are proficient with the expository genre, others struggle to meet these expectations. This book is designed to provide information on the use and understanding of expository discourse in school-age children, adolescents and young adults. Recently, researchers from around the world have been investigating the development of this genre in typical students and in those with language disorders. Although many books have addressed the development of conversational and narrative discourse, by comparison, books devoted to the topic of expository discourse are sparse. This cross-disciplinary volume fills that gap in the literature and makes a unique contribution to the study of language development and disorders. It will be of interest to a range of professionals including speech language pathologists, teachers, linguists and psychologists who are concerned with language development and disorders. *Here's How to Provide Intervention for Children with Autism Spectrum Disorder*

Catherine B. Zenko, Michelle Peters Hite, 2013-10-01 **Perspectives on Individual Differences Affecting Therapeutic Change in Communication Disorders** Amy L. Weiss, 2012-12-06 This volume examines the ramifications of individual differences in therapy outcomes for a wide variety of communication disorders. In an era where evidence-based practice is the clinical profession's watchword, each chapter attacks this highly relevant issue from a somewhat different perspective. In some areas of communication disorders, considering the variance brought by the client into the therapeutic mix has a healthy history; whereas in others, the notion of how individual client profiles mesh with therapy outcomes has rarely been considered. Through the use of research results, case study descriptions and speculation, the contributors have creatively woven what we know and what we have yet to substantiate into an interesting collection of summaries useful for therapy programming and designing clinical research.
