Language Cognition And Human Nature Selected Articles:

Language, Cognition, and Human Nature Steven Pinker, 2013-09-27 Collects for the first time Steven Pinker's most influential scholarly work on language and cognition. Pinker is a highly eminent cognitive scientist and these essays emphasize the importance of language and its connections to cognition, social relationships, child development, human evolution, and theories of human nature. *Language, Cognition, and Human Nature* Steven Pinker, 2014 This collection reprints a number of the author's classic articles which explore his favorite themes in greater depth and scientific detail. They include language development in children, neural network models of language, mental imagery, the recognition of shapes, the meaning and uses of verbs, the evolution of language and cognition, the nature of human concepts, the nature/nurture debate, the logic of innuendo and euphemism, and his responses to the ideas of Noam Chomsky, Jerry Fodor, and Richard Dawkins.

Human Being and Vulnerability Joseph Sverker, 2020-11-24 Joseph Sverker explores the division between social constructivism and a biologist essentialism by means of Christian theology. For this, Sverker uses a fascinating approach. He lets critical theorist Judith Butler, psycholinguist Steven Pinker, and systematic theologian Colin Gunton interact. While theology plays a central part to make the interaction possible, the context is also that of the school and the effect of institutions on the pupil as a human being and learner. In order to understand what underlies the division between nature and nurture or biology and the social in school, Sverker develops new central concepts such as a kenotic personalism, a weak ontology of relationality, and a relational and performative reading of evolution. He argues that most fundamental for what it is to be human is the person's vulnerability, bodiliness, openness to the other, and dependence. Sverker concludes that the division between constructivism and essentialism discloses a deeper divide, namely that between fundamentally vulnerable persons on the one hand and constructed independent individuals on the other. *Language, Cognition, and the Way We Think* Nikola A. Kompa, 2024-07-25 The cognitive potency of the human mind can be fully appreciated only if it is conceived of as a linguistic mind. This is the starting point of Nikola Kompa's investigation into the relationship between language and cognition. Underpinned by philosophical ideas from Plato to Ockham and from Locke to Vygotsky, Kompa uses theories within the philosophy of language, mind, and cognitive science and draws on neuro psychology and psycholinguistic studies to explore core ideas about language and cognition. How did language transform our ancestors into creatures of considerable cognitive and social accomplishment? How does language augment cognition? Is language only a means of communicating our ideas or is it a means of thinking itself? Her study has repercussions for a broad range of questions: from how humans differ from other animals and what a cognitive architecture looks like if it approximates the achievements of the human mind to questions of education and cross-cultural communication. Theorizing and forming hypotheses about how language and cognition might have coevolved, how the availability of symbolic labels enhance various cognitive functions, what the cognitive function of inner speech might be, and how inner speech and thought relate to each other. Kompa addresses the perennial

philosophical question of what the benefits of having a language might be and brings into sharper relief the intimate connection between linguistic and other cognitive functions Informed by recent discussions on language evolution labels and inner speech this timely contribution helps us understand more about how language changes the way we think *The New Celebrity Scientists* Declan Fahy,2015-03-06 A new cultural icon strode the world stage at the turn of the twenty first century the celebrity scientist as comfortable in Vanity Fair and Vogue as Smithsonian Declan Fahy profiles eight of these eloquent controversial and compelling sellers of science to investigate how they achieved celebrity in the United States and internationally and explores how their ideas influence our understanding of the world Fahy traces the career trajectories of Richard Dawkins Stephen Hawking Steven Pinker Neil deGrasse Tyson Brian Greene Stephen Jay Gould Susan Greenfield and James Lovelock He demonstrates how each scientist embraced the power of promotion and popularization to stimulate thinking impact policy influence research drive controversies and mobilize social movements He also considers critical claims that they speak beyond their expertise and for personal gain The result is a fascinating look into how celebrity scientists help determine what it means to be human the nature of reality and how to prepare for society s uncertain future **Deaf People and Society** Irene W.
