Johnson, 2018-10-24 This second edition provides extensive information on the attributes of the Natural Gas Hydrate NGH system highlighting opportunities for the innovative use and modification of existing technologies as well as new approaches and technologies that have the potential to dramatically lower the cost of NGH exploration and production Above all the book compares the physical environmental and commercial aspects of the NGH system with those of other gas resources It subsequently argues and demonstrates that natural gas can provide the least expensive energy during the transition to and possibly within a renewable energy future and that NGH poses the lowest environmental risk of all gas resources Intended as a non mathematical descriptive text that should be understandable to non specialists as well as to engineers concerned with the physical characteristics of NGH reservoirs and their production the book is written for readers at the university graduate level It offers a valuable reference guide for environmentalists and the energy community and includes discussions that will be of great interest to energy industry professionals legislators administrators regulators and all those concerned with energy options and their respective advantages and disadvantages

The Oil and Gas Engineering Guide Hervé Baron, 2010 Each engineering task is described and illustrated with a sample document taken from a real project *After the Sands* Gordon Laxer, 2015-10-03 After the Sands outlines a vision and a road map to transitioning Canada to a low carbon society Despite its oil abundance with no strategic reserves Canada is woefully unprepared for the next global oil supply crisis There s no good reason for Canadians to use much more oil per capita than people in other sparsely populated northern countries like Norway Finland and Sweden nations that use 27 to 39 percent less oil per person In After the Sands Alberta based political economist Gordon Laxer proposes a bold strategy of deep conservation and a Canada first perspective to ensure that all Canadians have sufficient energy at affordable prices The most achievable way to gain energy security is to supply Canadians with their own oil natural gas and renewable energy And the best way to cut carbon emissions is by phasing out Canada s role as a carbon fuel exporter Canada has all the oil gas and coal needed to transition to a low carbon future Remarkable hydro power resources give Canadians a large base of renewable energy which can be expanded with wind solar geothermal and biomass Few countries have these options in adequate quantities But as Laxer argues Canada will not get there until we overcome the power of vested interests and untangle the trade agreements that block Canadians from secure and fair access to the nation s own energy resources Impeccably researched After the Sands is critical reading for anyone concerned with climate change and the future of Canada **Capacity Building for Sustainable Development** Valentine Udoh James, 2018-04-02 This book presents over 40 cases of bamboo development across 22 major bamboo industry countries and explores the knowledge gained from their successes and failures It synthesises experiences and exchanges with country experts from international training courses and

consultations study tours and seminars Each case includes observations and summaries of discussions related to the development of bamboo based industries in a healthy sustainable way and the facilitation of strategic and balanced development of bamboo in different global regions Industrial and artisanal bamboo growing and processing is expanding worldwide and this book brings together key experiences to help inform future developments This book provides an analysis of bamboo plant features including strong renewability fast growing and high biomass production It also reviews important ecological functions of bamboos such as water and soil conservation carbon sink and storage and adaptation to climate change as well as addressing the diversified culture of bamboo and key issues affecting the sector Highly illustrated and in full colour throughout this book is an essential resource for all those interested in bamboo from private sector investors to governmental and development agencies academic researchers and students
