Asymmetric Cell Division Alvaro Macieira-Coelho, 2007-04-21 Cell biologists have recently become aware that the asymmetry of cell division is an important regulatory phenomenon in the fate of a cell During development cell diversity originates through asymmetry in the adult organism asymmetric divisions regulate the stem cell reservoir and are a source of the drift that contributes to the aging of organisms with renewable cell compartments Because of the concept of semi conservative DNA synthesis it was thought that the distribution of DNA between daughter cells was symmetric The analysis of the phenomenon in cells during mitosis however revealed the asymmetry in the distribution of the genetic material that creates the drift contributing to aging of mammals On the other hand cancer cells can originate from a deregulation of asymmetry during mitosis in particular during stem cell expansion The book describes the phenomenon in different organisms from plants to animals and addresses its implications for the development of the organism cell differentiation human aging and the biology of cancers

Hydrothermal microbial ecosystems Andreas Teske, Anna-Louise Reysenbach, 2015-11-24 The papers in the Hydrothermal Vents book cover a range of microbiological research in deep and shallow hydrothermal environments from high temperature black smokers to diffuse flow habitats and episodically discharging subsurface fluids to the hydrothermal plumes Together they provide a snapshot of current research interests in a field that has evolved rapidly since the discovery of hydrothermal vents in 1977 Hydrothermally influenced microbial habitats and communities represent a wide spectrum of geological setting chemical in situ regimes and biotic communities the classical examples of basalt hosted black smoker chimneys at active mid ocean spreading centers have been augmented by hydrothermally heated and chemically altered sediments microbiota fueled by serpentinization reactions and low temperature vents with unusual menus of electron donors Environmental gradients and niches provide habitats for unusual or unprecedented microorganisms and microbial ecosystems The discovery of novel extremophiles underscores untapped microbial diversity in hydrothermal vent microbial communities Different stages of hydrothermal activity from early onset to peak activity gradual decline and persistence of cold and fossil vent sites correspond to different colonization waves by microorganisms as well as megafauna Perhaps no other field in microbiology is so intertwined with the geological and geochemical evolution of the oceans and promises so many biochemical and physiological discoveries still to be made within the unexhausted richness of extreme microbial life
