framework Andres Cruz, This book is for anyone who wants to build their first applications in Laravel 12 this writing offers a step by step introduction to the framework knowing the most relevant aspects of it and is focused above all on practice it is assumed that the reader has knowledge and has developed PHP and related language technologies such as JavaScript HTML and CSS and even similar frameworks Remember that to use any framework you have to have the bases that support it that is its programming language Map This book has a total of 22 chapters it is recommended that you read in the order in which they are arranged and as we explain the components of the framework go directly to the practice replicate test and modify

the codes that we show in this book

Chapter 1 The necessary software is explained and its installation to develop in Laravel on Windows with Laragon or Laravel Herd or on MacOS Laravel Herd and MacOS and Linux with Laravel Sail and Docker

Chapter 2 We will talk about Laravel we will create a project we will configure the database we will know basic aspects of the framework and finally we will know the main element that are the routes

Chapter 3 We will take the first steps with the routes and the views to start seeing screens through the browser we ll also cover using controllers with views redirects directives and blade as template engine

Chapter 4 We will know the use of migrations as a central element to be able to create the models which are the layer that connects to the database to a particular table and to have this table we need the migrations

Chapter 5 We will get to know the MVC which is the heart of the framework and we will make a few examples that will help us to continue advancing

Chapter 6 We will create a simple CRUD app we will learn to work with the MVC resource type controllers lists pagination form validations database access among other related aspects

Chapter 7 We will know how to send flash type session messages which we will use to confirm CRUD operations and session usage

Chapter 8 This chapter is oriented to learn the use of routes which in Laravel are very extensible and full of options for groupings types and options

Chapter 9 In this chapter we are going to create an authentication system and all that this entails for our application by installing Laravel Breeze which also configures Tailwind css in the project and Alpine js Also we are going to expand the scheme provided by Laravel Breeze for authentication creating a protection based on roles to handle different types of users in specific modules of the application

Chapter 10 In this chapter we will learn about some common Eloquent operations applied to the database using query builders

Chapter 11 We are going to introduce the use of components in Laravel as a central element to create a modular application

Chapter 12 We will learn to generate test data through classes using the seeder system that the framework incorporates

Chapter 13 We will learn how to create a CRUD type Rest Api and additional methods to perform additional queries Also we are going to protect the CRUD type Rest Api with Sanctum using SPA and token authentication

Chapter 14 We are going to consume the Rest Api through a CRUD application in Vue 3 using axios requests and web components with Oruga UI we will also see the process of uploading files Also we will protect the application in Vue with login required to access its different modules using SPA authentication or Laravel Sanctum tokens

Chapter 15 We are going to learn how to manage the cache to save access data to improve application performance and avoid bottlenecks with the database

Chapter 16 We are going to learn how to manage access policies to certain application modules through Gates and Policies

Chapter 17 We will see how to handle polymorphism relationships to reuse models that have the same behavior

Chapter 18 We will see how to manage the permissions and roles of a user to authorize certain parts of the application with a flexible scheme and widely used in web applications of all kinds using Spatie in this chapter we will learn how to perform this integration and we will develop a module to manage this permissions

Chapter 19 In this chapter we will see how to manage configurations environment variables create help files send emails and topics of this type that as we

mentioned previously are fundamental in the development of web applications Chapter 20 In this chapter we will learn about important packages in Laravel to generate excels qrs seo PayPal detect mobile navigation among others Chapter 21 We will learn how to create unit and integration tests in the Rest Api and the blog type app using PHPUnit and Pest In Dev Chapter 22 We will talk about how you can push your Laravel application to production In Dev By the end of the book you will have the knowledge to create any basic application with the framework and know more than just the basics of it I invite you to visit my website desarrollolibre.net And get to know my work
