Landscape Ecology In Theory And Practice Pattern And Process:

Landscape Ecology in Theory and Practice Monica G. Turner, Robert H. Gardner, 2015-10-29 This work provides in depth analysis of the origins of landscape ecology and its close alignment with the understanding of scale the causes of landscape pattern and the interactions of spatial pattern with a variety of ecological processes The text covers the quantitative approaches that are applied widely in landscape studies with emphasis on their appropriate use and interpretation The field of landscape ecology has grown rapidly during this period its concepts and methods have matured and the published literature has increased exponentially Landscape research has enhanced understanding of the causes and consequences of spatial heterogeneity and how these vary with scale and they have influenced the management of natural and human dominated landscapes Landscape ecology is now considered mainstream and the approaches are widely used in many branches of ecology and are applied not only in terrestrial settings but also in aquatic and marine systems In response to these rapid developments an updated edition of *Landscape Ecology in Theory and Practice* provides a synthetic overview of landscape ecology including its development the methods and techniques that are employed the major questions addressed and the insights that have been gained

Landscape Ecology in Theory and Practice Monica G. Turner, Robert H. Gardner, Robert V. O'Neill, 2003-05-20 An ideal text for students taking a course in landscape ecology The book has been written by very well known practitioners and pioneers in the new field of ecological analysis Landscape ecology has emerged during the past two decades as a new and exciting level of ecological study Environmental problems such as global climate change land use change habitat fragmentation and loss of biodiversity have required ecologists to expand their traditional spatial and temporal scales and the widespread availability of remote imagery geographic information systems and desk top computing has permitted the development of spatially explicit analyses In this new text book this new field of landscape ecology is given the first fully integrated treatment suitable for the student Throughout the theoretical developments modeling approaches and results and empirical data are merged together so as not to introduce barriers to the synthesis of the various approaches that constitute an effective ecological synthesis The book also emphasizes selected topic areas in which landscape ecology has made the most contributions to our understanding of ecological processes as well as identifying areas where its contributions have been limited Each chapter features questions for discussion as well as recommended reading

Landscape Ecology in Theory and Practice Monica G. Turner, 2004 This text discusses the theoretical developments modelling approaches and results and empirical data of landscape ecology It also emphasizes selected topics in which landscape ecology has made the most contributions to our understanding of ecological processes

Landscape Ecology in Theory and Practice Monica G. Turner, Robert H. Gardner, Robert V. O'Neill, 2007-05-08 An ideal text for students taking a course in landscape ecology The book has been written by very well known practitioners and pioneers in the new field of ecological analysis Landscape ecology has emerged during the past two decades as a new and exciting level

of ecological study Environmental problems such as global climate change land use change habitat fragmentation and loss of biodiversity have required ecologists to expand their traditional spatial and temporal scales and the widespread availability of remote imagery geographic information systems and desk top computing has permitted the development of spatially explicit analyses In this new text book this new field of landscape ecology is given the first fully integrated treatment suitable for the student Throughout the theoretical developments modeling approaches and results and empirical data are merged together so as not to introduce barriers to the synthesis of the various approaches that constitute an effective ecological synthesis The book also emphasizes selected topic areas in which landscape ecology has made the most contributions to our understanding of ecological processes as well as identifying areas where its contributions have been limited Each chapter features questions for discussion as well as recommended reading

Landscape Genetics Niko Balkenhol, Samuel Cushman, Andrew Storfer, Lisette Waits, 2015-11-09 LANDSCAPE GENETICS CONCEPTS METHODS APPLICATIONS LANDSCAPE GENETICS CONCEPTS METHODS APPLICATIONS Edited by Niko Balkenhol Samuel A Cushman Andrew T Storfer Lisette P Waits Landscape genetics is an exciting and rapidly growing field melding methods and theory from landscape ecology and population genetics to address some of the most challenging and urgent ecological and evolutionary topics of our time Landscape genetic approaches now enable researchers to study in detail how environmental complexity in space and time affect gene flow genetic drift and local adaptation However learning about the concepts and methods underlying the field remains challenging due to the highly interdisciplinary nature of the field which relies on topics that have traditionally been treated separately in classes and textbooks In this edited volume some of the leading experts in landscape genetics provide the first comprehensive introduction to underlying concepts commonly used methods and current and future applications of landscape genetics Consistent with the interdisciplinary nature of the field the book includes textbook like chapters that synthesize fundamental concepts and methods underlying landscape genetics Part 1 chapters on advanced topics that deserve a more in depth treatment Part 2 and chapters illustrating the use of concepts and methods in empirical applications Part 3 Aimed at beginning landscape geneticists and experienced researchers alike this book will be helpful for all scientists and practitioners interested in learning teaching and applying landscape genetics

Territorial Analysis of Environments Etienne Cossart, Anne Rivière-Honegger, 2024-12-12 Territories are currently faced with a wide range of environmental challenges but suffer from a lack of access to the information and biophysical data that characterizes these challenges Territorial Analysis of Environments sheds light on how the data produced on environmental change needs to be processed completed and disseminated so that local players can take ownership of it The aim is to present methods for developing local regional or even global indicators of the changes underway as well as to understand the logic of the players acting in a given area To this end this book places great emphasis on the notions of systems and the modeling approaches used to formalize them It also presents the data available and the methods for developing an analysis of their spatial

dimension This is based on a wide range of case studies combining environmental data and stakeholder games **Wildlife Management and Landscapes** William F. Porter, Chad J. Parent, Rosemary A. Principles and Methods in Landscape Ecology Almo Farina, 2022-05-25 This third thoroughly updated edition of a well received book presents the most complete collection of theories paradigms and methods utilized by the landscape sciences With the introduction of new ecosemiotic concepts and innovative managing procedures it offers a broad list of ecological ecosemiotical and cultural tools to investigate interpret and manage the environmental complexity according to a species specific individual based approach Readers will discover the importance of a landscape perspective to create strategic bridges between science and humanities favored by the holistic sight of sensorial visual acoustic olfactory tactile and thermal scapes Distributed in 10 chapters the content covers many aspects of the landscape sciences ranging from the description of fundamental theories principles and models originated by ecological approaches like source sink models island biogeography hierarchical theory and scale The ecosemiotical approaches like the eco field model the ecoscape paradigm and the general theory of resources are widely described and discussed A cultural approach to landscape is utilized to focus on the heritage values of territories and their environmental identity This book written in an accessible and didactic style is particularly dedicated to undergraduate and graduate students but also scholars in ecology agroforestry urban planning nature design conservation and remediation Land practitioners farmers and policymakers can use this book as an authoritative guide to better understand the function and role of environmental systems according to a social economic integrated perspective

Landscape Modelling Jiří Anděl, Ivan Bičík, Petr Dostál, Zdeněk Lipský, Siamak G. Shahneshin, 2010-04-11 Landscape modelling integrates the differing perspectives of the many disciplines that deal with the landscape It is motivated not only by the desire for scientific understanding but also by the real time demands of 21st century postindustrial society which include the twin imperatives of stabilizing damaged ecosystems on the one hand and finding effective ways to use the landscape on the other The discipline has the specific goal of designing and assessing future scenarios of landscape development while not losing sight of its past history both ecological and socio cultural This book encompasses the interrelated disciplines of geography landscape ecology and geoinformatics and by drawing on their theories and methodologies introduces the concept of a living landscape with human action an inseparable part of its evolution It offers researchers and decision makers a number of ideas on how our landscape can best be utilized The content reflects the need for sustainable landscape development at the same time as considering long term continuity as a major condition which

enables us to maintain the diversity and multifunctionality of landscapes at regional and macro regional scales Employing advanced terminology and methods this book provides specific results especially for scientists and landscape professionals

Landscape Analysis and Visualisation Christopher Pettit, William Cartwright, Ian Bishop, Kim Lowell, David Pullar, David Duncan, 2008-06-03 Michael Batty Centre for Advanced Spatial Analysis University College London Landscapes like cities cut across disciplines and professions This makes it especially difficult to provide an overall sense of how landscapes should be studied and researched Ecology aesthetics economy and sociology combine with physiognomy and deep physical structure to confuse our derstanding and the way we should react to the problems and potentials of landscapes Nowhere are these dilemmas and paradoxes so clearly highlighted as in Australia where landscapes dominate and their relationship to cities is so fragile yet so important to the sustainability of an entire nation if not planet This book presents a unique collection and synthesis of many of these perspectives perhaps it could only be produced in a land urb ised in the tiniest of pockets and yet so daunting with respect to the way non populated landscapes dwarf its cities Many travel to Australia to its cities and never see the landscapes but it is these that give the country its power and imagery It is the landscapes that so impress on us the need to consider how our intervention through activities ranging from resource exploitation and settled agriculture to climate change poses one of the greatest crises facing the modern world In this sense Australia and its landscape provide a mirror through which we can glimpse the extent to which our intervention in the world threatens its very existence **Land Use**

Change Richard J. Aspinall, Michael J. Hill, 2007-12-14 Changes in the use of land reflect a variety of environmental and social factors necessitating an equally varied suite of data to be used for effective analysis While remote sensing both from satellites and air photos provides a central resource for study socio economic surveys censuses and map sources also supply a wealth of valid informati The Routledge Handbook of Landscape Ecology Robert A. Francis, James D.A.

Millington, George L.W. Perry, Emily S. Minor, 2021-09-08 The Handbook provides a supporting guide to key aspects and applications of landscape ecology to underpin its research and teaching A wide range of contributions written by expert researchers in the field summarize the latest knowledge on landscape ecology theory and concepts landscape processes methods and tools and emerging frontiers Landscape ecology is an interdisciplinary and holistic discipline and this is reflected in the chapters contained in this Handbook Authors from varying disciplinary backgrounds tackle key concepts such as landscape structure and function scale and connectivity landscape processes such as disturbance flows and fragmentation methods such as remote sensing and mapping fieldwork pattern analysis modelling and participation and engagement in landscape planning and emerging frontiers such as ecosystem services landscape approaches to biodiversity conservation and climate change Each chapter provides a blend of the latest scientific understanding of its focal topics along with considerations and examples of their application from around the world An invaluable guide to the concepts methods and applications of landscape ecology this book will be an important reference text for a wide range of students and academics in

Habitat Fragmentation and Landscape Change

David B. Lindenmayer, Joern Fischer, 2013-02-22 Habitat loss and degradation that comes as a result of human activity is the single biggest threat to biodiversity in the world today Habitat Fragmentation and Landscape Change is a groundbreaking work that brings together a wealth of information from a wide range of sources to define the ecological problems caused by landscape change and to highlight the relationships among landscape change habitat fragmentation and biodiversity conservation The book synthesizes a large body of information from the scientific literature considers key theoretical principles for examining and predicting effects examines the range of effects that can arise explores ways of mitigating impacts reviews approaches to studying the problem discusses knowledge gaps and future areas for research and management Habitat Fragmentation and Landscape Change offers a unique mix of theoretical and practical information outlining general principles and approaches and illustrating those principles with case studies from around the world It represents a definitive overview and synthesis on the full range of topics that fall under the widely used but often vaguely defined term habitat fragmentation
