Special Operations Facundo Conforti,

The maneuvers of an Airbus A320 are extremely simple during normal operations They may present minimal complexity during abnormal operations but the aircraft is extremely easy to fly On the other hand there are special operations that require a higher level of attention and these are not necessarily abnormal operations or emergencies but rather uncommon operations such as flights in wind shear volcanic ash among others In this work you will learn all the details of each of these special operations which will take your understanding of A320 flight to the next level Mergent International Manual

Optimizing Health: Improving the Value of Healthcare Delivery Franz Porzsolt,Robert M. Kaplan,2007-07-07 As health care costs soar there is increasing interest in examining what society and particularly patients receive in return for these expenditures Optimizing Health brings together the best thinking from both sides of the Atlantic to explore these issues It employs disciplinary perspectives from economics ethics philosophy psychology clinical practice and epidemiology to explore various ways that value for patients have and can be determined It concludes with a discussion of changes required in practice research and health care systems to maximize the outcomes received from the provision of medical care services from the patient's perspective The first section of the book provides theoretical perspectives from economics and systems thinking that help us to focus on how one might determine the value of medical care for patients The next section considers the ethical and philosophical dilemmas that face developed countries in distributing medical care How is justice served and evidence based medicine employed to increase the value of medical care for patients The section on psychology deals with

measuring outcomes from the patient's perspective and involving patients in medical decision making. Measuring quality of life and gaining valid quality of life information when patients cannot respond for themselves are important topics covered by these chapters. Other chapters consider ways that patients can become more involved in medical decision making with the expectation that this will increase the value of medical care for patients. A major section of the book about clinical practice discusses problems that can reduce the value to patients of medical care. These include overdiagnosis, aggressive treatments that do not result in better patient outcomes, findings that earlier diagnosis does not always result in better outcomes, and the extent of medical error in treatment. The final sections deal with cost effectiveness analyses and applications of clinical epidemiology. The chapters include a number of original investigations and applications of new methodologies. All in all, the volume is must reading for practitioners, policy makers, and researchers who want to find in one place the state of the art thinking and future directions of valuing medical care from the patient's perspective.
