Lung Pleural Pathology Philip Cagle:

Dail and Hammar's Pulmonary Pathology Joseph F. Tomashefski, 2010-05-17 Dail and Hammar's Pulmonary Pathology has established itself as the definitive reference in the field. This third edition is now a two volume full color text led by Dr Tomashefski as Editor in Chief and Drs Cagle, Farver and Fraire as Associate Editors. The new editorial board has continued to build upon the excellence Dail and Hammar achieved in the previous editions by reorganizing, expanding and substantially revising the text. This authoritative reference work has been thoroughly updated to cover newly recognized entities and the latest advances in molecular diagnostic techniques. Abundantly illustrated with more than 2000 full color illustrations, this outstanding contribution to pathology literature is a must have for the library of every surgical and pulmonary pathologist. Dail and Hammar's Pulmonary Pathology has set the standard for which all other pathology texts strive to achieve. From stellar reviews of the Second Edition: When the first edition of Pulmonary Pathology by David H Dail and Samuel P Hammar was published in 1988, it was clear that it was to become the reference book for pulmonary pathology. It was difficult to conceive then that a better book on the subject could be assembled. The second edition of this encyclopedic work proved convincingly that improvement could occur. Indeed, the new revised edition is more complete and better illustrated. I consider this book to be an outstanding contribution to the pathology literature and a must in the library of surgical and pulmonary pathologists. Human Pathology Color Atlas and Text of Pulmonary Pathology Philip T. Cagle, Roberto Barrios, Timothy C. Allen, 2008 Thoroughly updated for its Second Edition, this comprehensive profusely illustrated text atlas covers the full range of pulmonary pathology including common, rare and newly described diseases, both neoplastic and non neoplastic. The book presents a multimodality approach to diagnosis, integrating cytologic, radiologic, surgical and clinical pathologic features of each disease. By combining carefully chosen color illustrations with lists of distinguishing features of each entity, this text atlas provides a quick path to accurate diagnosis. This edition features updated sections on pulmonary hypertension, pulmonary hemorrhage, lung transplantation and pediatric pulmonary pathology, including new classification and grading systems. Throughout the book, new entities and new images have been added. An online image bank provides instant access to all the book's illustrations. **Molecular Pathology of Lung Diseases** Dani S. Zander, Helmut Popper, Jaishree Jagirdar, Abida Haque, Roberto Barrios, 2010-05-26 Molecular Pathology of Lung Diseases, the first volume in the Molecular Pathology Library Series under the series editorship of Philip T Cagle MD, provides a bridge between clinical pulmonary pathology and basic molecular science. It is designed to provide a practical, disease based overview that will be useful to pathologists, pulmonologists, thoracic surgeons and other health care providers interested in lung disease. The first two sections of the volume provide the reader with general concepts, terminology and procedures in molecular pathology. The remainder of the volume is subdivided into neoplastic and non neoplastic lung diseases, with detailed chapters covering the current molecular pathology of specific diseases. **Lung and Pleural Pathology** Philip

Frozen Section Library: Pleura Philip T. Cagle, Timothy Craig Allen, 2010-03-10 Frozen sections are diagnosed by the pathologist while a patient is undergoing surgery often under general anesthesia for the purpose of rapid diagnosis which may be used to make immediate treatment decisions or to confirm that diagnostic tissues have been sampled for further study As a result frozen section diagnosis is often a highly demanding situation for the pathologist who must render a diagnosis quickly and is a basis for critical decisions to the surgeon In addition to the need for rapid recall of differential diagnoses there are many pitfalls and artifacts that add to the risk of frozen section diagnosis that are not present with permanent sections of fully processed tissues that can be examined in a more leisurely fashion Most standard pathology textbooks both general and subspecialty largely ignore the topic of frozen section Few textbooks have ever focused exclusively on frozen section diagnosis and those textbooks that have done so are now out of date and have limited numbers of black and white figures Frozen Section Library Pleura provides a convenient user friendly handbook to expedite use when performing intraoperative consultations on pleural specimens This book is divided into chapters that emphasize the common questions that a pathologist must answer on frozen section examination and the pitfalls associated with those specific diagnoses The diagnostic issues impacting immediate surgical decision making are color illustrated and discussed succinctly including a complex array of primary and secondary neoplasms of the pleura that have overlapping histologic features and the well known problems of reactive atypia versus cancer in pleural tissue As a handbook for practicing pathologists this book is an indispensable aid to diagnosis and avoiding dangers in one of the most challenging situations that pathologists encounter Rapid consideration of differential diagnoses and how to avoid traps caused by frozen section artifacts will be readily accessible to the users of this handbook Tables provide guidance for various categories of differential diagnoses Currently there is no other up to date single source
