The steering cylinder (1) is single piston both rod double-acting type. This steering cylinder is installed on the pinion bearing case (12) and connected to tie rods. The tie rods connected to both knuckle arms guarantee equal steering movement to both front wheels.

The steering cylinder provides force in both directions. Depending upon direction the steering wheel is turned, pressure oil enters at one end of the cylinder to extend, or the other end to retract it. Thereby the front wheel of the tractor is turned.
