Brocklebank, David A. Dickey, 2003-07-14 Easy to read and comprehensive this book shows how the SAS System performs multivariate time series analysis and features the advanced SAS procedures STATSPACE ARIMA and SPECTRA The interrelationship of SAS ETS procedures is demonstrated with an accompanying discussion of how the choice of a procedure depends on the data to be

analysed and the results desired. Other topics covered include detecting sinusoidal components in time series models and performing bivariate correlation spectral analysis and comparing the results with the standard transfer function methodology. The authors' unique approach to integrating students in a variety of disciplines and industries. Emphasis is on correct interpretation of output to draw meaningful conclusions. The volume co-published by SAS and JWS features both theory and practicality and accompanies a soon to be extensive library of SAS hands-on manuals in a multitude of statistical areas. The book can be used with a number of hardware-specific computing machines including CMS Mac MVS Open VMS Alpha Open VMS VAX OS 390 OS 2 UNIX and Windows.

SAS for Linear Models Ramon Littell, Walter W. Stroup, Rudolf Freund, 2002-05-24. Features and capabilities of the REG ANOVA and GLM procedures are included in this introduction to analysing linear models with the SAS System. This guide shows how to apply the appropriate procedure to data analysis problems and understand PROC GLM output. Other helpful guidelines and discussions cover the following significant areas: Multivariate linear models, lack of fit analysis, covariance and heterogeneity of slopes, a classification with both crossed and nested effects, and analysis of variance for balanced data. This fourth edition includes updated examples, new software-related features, and new material including a chapter on generalised linear models. Version 8 of the SAS System was used to run the SAS code examples in the book. Provides clear explanations of how to use SAS to analyse linear models. Includes numerous SAS outputs. Includes new chapter on generalised linear models. Uses version 8 of the SAS system. This book assists data analysts who use SAS STAT software to analyse data using regression analysis and analysis of variance. It assumes familiarity with basic SAS concepts such as creating SAS data sets with the DATA step and manipulating SAS data sets with the procedures in base SAS software.
