Structures Tomasz Lewiński,Tomasz Sokół,Cezary Graczykowski,2018-09-27 The book covers the theory of Michell structures
being the lightest and fully stressed systems of bars designed within a given domain possibly within the whole space
transmitting a given load towards a given support Discovered already in 1904 by A G M Michell the structures named after
him have attracted constant attention due to their peculiar feature of disclosing the optimal streams of stresses equilibrating
a given load and thus determining the optimal layout of bars The optimal layouts emerge from among all possible structural

topologies thus constituting unique designs being simultaneously light and stiff The optimal structures turn out to be embedded in optimal vector fields covering the whole feasible domain Key features include a variationally consistent theory of bar systems thin plates in bending and membrane shells recapitulation of the theory of optimum design of trusses of minimum weight or of minimal compliance the basis of 2D Michell theory for a single load case kinematic and static approaches 2D benchmark constructions including Hemp's structures and optimal cantilevers L shape domain problems three forces problem in 2D bridge problems revisiting the old and delivering new 3D benchmark solutions extension to multiple load conditions Prager Rozvany grillages the theory of funiculars and archgrids the methods of optimum design of shape and material inspired by the theory of Michell structures industrial applications The book can be useful for graduate students professional engineers and researchers specializing in the Optimum Design and in Topology Optimization in general

Power of Emotions: On the Affective Constitution of Political Struggle Andreas Ventsel, Peeter Selg, 2025-07-11 The emergence of political identities and communities in social media is largely driven by affective responses to current events a tendency facilitated by the dominance of emotionally and visually oriented communication However this mode of community formation leads first to the inherent instability and transience of these groups and second to the oversimplification of complex socio political issues into binary yes no alternatives Within this framework deliberation and argumentation based problem solving become increasingly difficult as discourse is supplanted by emotional reactions that position individuals either for or against an issue Particularly significant is the role of affect and emotion in communication during times of crisis whether in the context of migration the COVID 19 pandemic or the war in Ukraine This affective role is evident in the anchoring of public discourse to personal emotions and the generation and dissemination of hashtags and tags that consolidate diverse phenomena under a unified label Such collective identity coalesces around connective action which is primarily driven either by opposition to the established order or by the reinforcement of a preexisting system s foundations Consequently the emergence of these
