Loewy Decomposition Of Linear Differential Equations Texts Monographs In Symbolic Computation:

Loewy Decomposition of Linear Differential Equations Fritz Schwarz, 2012-09-29 The central subject of the book is the generalization of Loewy's decomposition originally introduced by him for linear ordinary differential equations to linear partial differential equations. Equations for a single function in two independent variables of order two or three are comprehensively discussed. A complete list of possible solution types is given. Various ad hoc results available in the literature are obtained algorithmically. The border of decidability for generating a Loewy decomposition are explicitly stated. The methods applied may be generalized in an obvious way to equations of higher order in more variables or systems of such equations.

Algorithmic Lie Theory for Solving Ordinary Differential Equations Fritz Schwarz, 2007-10-02 Despite the fact that Sophus Lie's theory was virtually the only systematic method for solving nonlinear ordinary differential equations (ODEs) it was rarely used for practical problems because of the massive amount of calculations involved. But with the advent of computer algebra programs it became possible to apply Lie theory to concrete problems.

Symbolic Computation Edward L. Green, 2001 This volume presents the proceedings from the research conference Symbolic Computation Solving Equations in Algebra Analysis and Engineering held at Mount Holyoke College MA. It provides an overview of current research in symbolic computation as it applies to the solution of polynomial systems. The conference brought together pure and applied mathematicians, computer scientists and engineers who use symbolic computation to solve systems of equations or who develop the theoretical background and tools needed for this purpose. Within this general framework the conference focused on several themes: systems of polynomials, systems of differential equations, noncommutative systems and applications.

Symbolic Solution of Linear Differential Equations R. A. Feinberg, Ronald G. Grooms, United States. National Aeronautics and Space Administration, 1981

Formal Algorithmic Elimination for PDEs Daniel Robertz, 2014-10-13 Investigating the correspondence between systems of partial differential equations and their analytic solutions using a formal approach, this monograph presents algorithms to determine the set of analytic solutions of such a system and conversely to find differential equations whose set of solutions coincides with a given parametrized set of analytic functions. After giving a detailed

introduction to Janet bases and Thomas decomposition the problem of finding an implicit description of certain sets of analytic functions in terms of differential equations is addressed Effective methods of varying generality are developed to solve the differential elimination problems that arise in this context In particular it is demonstrated how the symbolic solution of partial differential equations profits from the study of the implicitization problem For instance certain families of exact solutions of the Navier Stokes equations can be computed
