Fundamentals of Algebraic Specification 2

Hartmut Ehrig,Bernd Mahr,2012-12-06 Since the early seventies concepts of specification have become central in the whole area of computer science Especially algebraic specification techniques for abstract data types and software systems have gained considerable importance in recent years They have not only played a central role in the theory of data type specification but meanwhile have had a remarkable influence on programming language design system architectures and software tools and environments The fundamentals of algebraic specification lay a basis for teaching research and development in all those fields of computer science where algebraic techniques are the subject or are used with advantage on a conceptual level Such a basis however we do not regard to be a synopsis of all the different approaches and achievements but rather a consistently developed theory Such a theory should mainly emphasize elaboration of basic concepts from one point of view and in a rigorous way reach the state of the art in the field We understand fundamentals in this context as 1 Fundamentals in the sense of a carefully motivated introduction to algebraic specification which is understandable for computer scientists and mathematicians 2 Fundamentals in the sense of mathematical theories which are the basis for precise definitions constructions results and correctness proofs 3 Fundamentals in the sense of concepts from computer science which are introduced on a conceptual level and formalized in mathematical terms

Recent Trends in Data Type Specification

Hartmut Ehrig,1991 The algebraic specification of abstract data types is now a well established research topic in computer science This area influences both applications and theoretical foundations of methodologies which support the design and formal development of reliable software The Seventh Workshop on Specification of Abstract Data Types took place in Wusterhausen Dosse April 17 20 1990 and was organized in cooperation with the ESPRIT Basic Research Working Group COMPASS The main topics covered by the workshop were Modularization Object orientation Higher order types and dependent types Inductive completion Algebraic high level nets PUBLISHER S WEBSITE

Domain Science and Engineering

Dines Bjørner,2021-11-08 In this book the author explains domain engineering and the underlying science and he then shows how we can derive requirements prescriptions for computing systems from domain descriptions A further motivation is to present

domain descriptions requirements prescriptions and software design specifications as mathematical quantities The author's maxim is that before software can be designed we must understand its requirements and before requirements can be prescribed we must analyse and describe the domain for which the software is intended He does this by focusing on what it takes to analyse and describe domains By a domain we understand a rationally describable discrete dynamics segment of human activity of natural and man made artefacts examples include road rail and air transport container terminal ports manufacturing trade healthcare and urban planning The book addresses issues of seemingly large systems not small algorithms and it emphasizes descriptions as formal mathematical quantities This is the first thorough monograph treatment of the new software engineering phase of software development one that precedes requirements engineering It emphasizes a methodological approach by treating in depth analysis and description principles techniques and tools It does this by basing its domain modeling on fundamental philosophical principles a view that is new for a computer science monograph The book will be of value to computer scientists engaged with formal specifications of software The author reveals this as a field of interesting problems most chapters include pointers to further study and exercises drawn from practical engineering and science challenges The text is supported by a primer to the formal specification language RSL and extensive indexes

Verification of Reactive Systems Klaus Schneider, 2003-10-16 This book is a solid foundation of the most important formalisms used for specification and verification of reactive systems In particular the text presents all important results on μ -calculus w automata and temporal logics shows the relationships between these formalisms and describes state of the art verification procedures for them It also discusses advantages and disadvantages of these formalisms and shows up their strengths and weaknesses Most results are given with detailed proofs so that the presentation is almost self contained Includes all definitions without relying on other material Proves all theorems in detail Presents detailed algorithms in pseudo code for verification as well as translations to other formalisms

Paradigms of Concurrency Ryszard Janicki, Jetty Kleijn, Maciej Koutny, Łukasz Mikulski, 2022-06-06 Paradigms of Concurrency Observations Behaviours and Systems a Petri Net View Ryszard Janicki McMaster University CA Jetty Kleijn Leiden University NL Maciej Koutny Newcastle University UK Łukasz Mikulski Nicolaus Copernicus University PL Concurrency can be studied at different yet consistent levels of abstraction from individual behavioural observations via more abstract concurrent histories that can be represented by causality structures capturing invariant dependencies between executed actions to system level constructs such as Petri nets or process algebra expressions Histories can then be understood as sets of closely related observations Depending on the nature of the observed relationships between executed actions involved in a single concurrent history one may identify different concurrency paradigms underpinned by different kinds of causality structures such as partial orders This book

studies fundamental mathematical abstractions to capture and relate observations histories and systems In particular taking a Petri net view we present system models fitting various concurrency paradigms and their associated causality structures

Alagar,Maurice Nivat,1995-05-21 This volume constitutes the proceedings of the 4th International Conference on Algebraic Methodology and Software Technology held in Montreal Canada in July 1995 It includes full papers or extended abstracts of the invited talks refereed selected contributions and research prototype tools The invited speakers are David Gries Jeanette Wing Dan Craigen Ted Ralston Ewa Orlowska Krzysztof Apt Joseph Goguen and Rohit Parikh The 29 refereed papers presented were selected from some 100 submissions they are organized in sections on algebraic and logical foundations concurrent and reactive systems software technology logic programming and databases

Foundations of Algebraic Specification and Formal Software Development Donald Sannella,Andrzej Tarlecki,2012-01-05 This book provides foundations for software specification and formal software

development from the perspective of work on algebraic specification concentrating on developing basic concepts and studying their fundamental properties These foundations are built on a solid mathematical basis using elements of universal algebra category theory and logic and this mathematical toolbox provides a convenient language for precisely formulating the concepts involved in software specification and development Once formally defined these notions become subject to mathematical investigation and this interplay between mathematics and software engineering yields results that are mathematically interesting conceptually revealing and practically useful The theory presented by the authors has its origins in work on algebraic specifications that started in the early 1970s and their treatment is comprehensive This book contains five kinds of material the requisite mathematical foundations traditional algebraic specifications elements of the theory of institutions formal specification and development and proof methods While the book is self contained mathematical maturity and familiarity with the problems of software engineering is required and in the examples that directly relate to programming the authors assume acquaintance with the concepts of functional programming The book will be of value to researchers and advanced graduate students in the areas of programming and theoretical computer science

Syntax-Directed Semantics Zoltan Fülöp, Heiko Vogler, 2012-12-06 The subject of this book is the investigation of tree transducers Tree transducers were introduced in theoretical computer science in order to study the general properties of formal models which give semantics to context free languages in a syntax directed way Such formal models include attribute grammars with synthesized attributes only denotational semantics and at tribute grammars with synthesized and inherited attributes However these formal models share certain constituents which are irrelevant in the investi gation of the general properties considered in this book In particular we can abstract a from derivation trees of the context free grammar and take trees over some ranked alphabet b from the semantic domain of the model and use the initial term algebra instead and finally c from the machine oriented computation paradigm which maintains the incarnation information of recursive function calls and take a term rewriting semantics instead Ap plying these three abstraction steps to attribute grammars with synthesized attributes only to denotational semantics and to attribute grammars we obtain the concepts of top down tree transducer macro tree transducer and attributed tree transducer respectively The macro attributed tree transducer combines the concepts of the macro tree transducer and the attributed tree transducer This book explores the general properties of these four types of tree transducers

Communication Complexity and Parallel Computing Juraj Hromkovič, 2013-03-09 The communication complexity of two party protocols is an only 15 years old complexity measure but it is already considered to be one of the fundamen tal complexity measures of recent complexity theory Similarly to Kolmogorov complexity in the theory of sequential computations communication complex ity is used as a method for the study of the complexity of concrete computing problems in parallel information processing Especially it is applied to prove lower bounds that say what computer resources time hardware memory size are necessary to compute the given task Besides the estimation of the compu tational

difficulty of computing problems the proved lower bounds are useful for proving the optimality of algorithms that are already designed In some cases the knowledge about the communication complexity of a given problem may be even helpful in searching for efficient algorithms to this problem The study of communication complexity becomes a well defined independent area of complexity theory In addition to a strong relation to several fundamental complexity measures and so to several fundamental problems of complexity theory communication complexity has contributed to the study and to the understanding of the nature of determinism nondeterminism and randomness in algorithmics There already exists a non trivial mathematical machinery to handle the communication complexity of concrete computing problems which gives a hope that the approach based on communication complexity will be instrumental in the study of several central open problems of recent complexity theory Logic and Algebra of Specification Friedrich L. Bauer, Wilfried Brauer, Helmut

Schwichtenberg, 2012-12-06 For some years specification of software and hardware systems has been influenced not only by algebraic methods but also by new developments in logic These new developments in logic are partly based on the use of algorithmic techniques in deduction and proving methods but are also due to new theoretical advances to a great extent stimulated by computer science which have led to new types of logic and new logical calculi The new techniques methods and tools from logic combined with algebra based ones offer very powerful and useful tools for the computer scientist which may soon become practical for commercial use where in particular more powerful specification tools are needed for concurrent and distributed systems This volume contains papers based on lectures by leading researchers which were originally given at an international summer school held in Marktoberdorf in 1991 The papers aim to give a foundation for combining logic and algebra for the purposes of specification under the aspects of automated deduction proving techniques concurrency and logic abstract data types and operational semantics and constructive methods
