Loneliness Updated Ami Rokach, 2013-10-18 To be alone is to be different To be different is to be alone and to be in the interior of this fatal circle is to be lonely To be lonely is to have failed Susan Schultz 1976 Loneliness carries a significant social stigma as lack of friendship and social ties is socially undesirable and social perceptions of lonely people are generally unfavourable Lonely people often have very negative self perceptions believing that the inability to establish social ties is due to personal inadequacies or socially undesirable attributes This book is divided into three parts The first part reviews loneliness in general describing what it is and how it affects us The second part examines loneliness throughout the life cycle analysing how it affects us in childhood adulthood and as we age The final part explores the connection between loneliness and other conditions such as arthritis eating disorders and depression *Loneliness Updated* offers the latest research on how loneliness can affect us in our daily lives and how it is expressed as we travel through life from childhood to old age It will be a highly interesting read for scholars students and researchers of clinical psychology particularly those interested in further exploring the effects and consequences of loneliness This book was originally published as a special issue of *The Journal of Psychology*

Exploring Cognitive and Psychosocial Dynamics Across Childhood and Adolescence Sofologi, Maria, Katsarou, Dimitra, Efthymiou, Efthymia, 2024-09-06 As the world of

education evolves rapidly understanding the intricacies of emotion cognition and language development is becoming increasingly vital Unfortunately the existing literature often fails to provide a comprehensive and interdisciplinary approach to this complex subject This knowledge gap leaves scholars researchers and practitioners needing a cohesive framework to navigate the challenges of language acquisition and learning difficulties during critical formative years The groundbreaking book *Exploring Cognitive and Psychosocial Dynamics Across Childhood and Adolescence* offers a fresh perspective by integrating cutting edge research from psycholinguistics neuroscience and developmental psychology By synthesizing the seminal works of leading scholars and highlighting innovative studies this book presents a holistic understanding of language development from preschool to adolescence

Technology and Students with Special Educational Needs Adina Shamir,Malka Margalit,2016-04-08 Heterogeneous classes including students with Special Educational Needs SEN are increasingly becoming fixtures of the twenty first century school As a result the question of how to devise more effective innovative and diverse tools has posed a significant challenge for educators and the research community This collection considers how technology may provide SEN children with greater opportunities to acquire academic skills while preparing them for a successful transition to adulthood Computers and other new technologies hold great promise for facilitating the inclusion of SEN individuals into modern society Precisely because they are characterized by multiple representations of knowledge computerized learning environments offer effective support tools for the instruction of SEN students faced with barriers that make learning a more complex process Yet despite the blossoming of this field research on how the use of technology may benefit SEN students is in its early stages The development of the theoretical knowledge and empirical databases necessary to assess the impact of computers on learners characteristics and educators teaching goals lag behind the introduction of the respective technological innovations To meet this challenge this volume presents a review of the latest advances in how new technologies and their software may potentially enhance SEN students performance in school and out This book was originally published as a special issue of the *European Journal of Special Needs*

Encyclopedia of the Sciences of Learning Norbert M. Seel, 2011-10-05 Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i.e. how they acquire, organize and deploy knowledge and skills. The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation, cognition, metacognition etc. and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology. Beyond folk psychology and its naïve theories of learning, psychological learning theories can be grouped into some basic categories such as behaviorist learning theories, connectionist learning theories, cognitive learning theories, constructivist learning theories and social learning theories. Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology, education, information science, biology and as a result of the emergence of computer technologies, especially also in the field of computer sciences and artificial intelligence. As a consequence, machine learning struck a chord in the 1980s and became an important field of the learning sciences in general. As the learning sciences became more specialized and complex, the various fields of interest were widely spread and separated from each other as a consequence. Even presently, there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely. The Encyclopedia of the Sciences of Learning provides an up-to-date, broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields, including relevant areas of instruction, pedagogy, cognitive sciences and especially machine learning and knowledge engineering. This modern compendium will be an indispensable source of information for scientists, educators, engineers and technical staff active in all fields of learning. More specifically, the Encyclopedia provides fast access to the most relevant theoretical terms, provides up-to-date, broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies, supplies clear and precise explanations of the theoretical terms, cross-references to related entries and up-to-date references to important research and publications. The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning; the entries are written by a distinguished panel of researchers in the various fields of the learning sciences.

Threshold Concepts in Practice Ray Land, Jan H. F. Meyer, Michael T. Flanagan, 2016-07-09 Threshold Concepts in Practice brings together fifty researchers from sixteen countries and a wide variety of disciplines to analyse their teaching practice and the learning experiences of their students through the lens of the Threshold Concepts Framework In any discipline there are certain concepts the jewels in the curriculum whose acquisition is akin to passing through a portal Learners enter new conceptual and often affective territory Previously inaccessible ways of thinking or practising come into view without which they cannot progress and which offer a transformed internal view of subject landscape or even world view These conceptual gateways are integrative exposing the previously hidden interrelatedness of ideas and are irreversible However they frequently present troublesome knowledge and are often points at which students become stuck Difficulty in understanding may leave the learner in a liminal state of transition a betwixt and between space of knowing and not knowing where understanding can approximate to a form of mimicry Learners navigating such spaces report a sense of uncertainty ambiguity paradox anxiety even chaos The liminal space may equally be one of awe and wonderment Thresholds research identifies these spaces as key transformational points crucial to the learner's development but where they can oscillate and remain for considerable periods These spaces require not only conceptual but ontological and discursive shifts This volume the fourth in a tetralogy on Threshold Concepts discusses student experiences and the curriculum interventions of their teachers in a range of disciplines and professional practices including medicine law engineering architecture and military education Cover image Detail from Eve offering the apple to Adam in the

Disability, Happiness and the Welfare State Hisayo Katsui, Matti T. Laitinen, 2024-03-26 This book looks at disability as an evolving social phenomenon Disability is created through the interaction between persons with impairments and their environment Exploring these experiences of persons with disabilities and discussing universality and particularity in our understanding of assumed development and normalcy it takes Finland which has been chosen repeatedly as the happiest country in the world as its case study Using disability as a critical lens helps to demystify Finland that has the positive reputation of a Welfare State By identifying different kinds of discrimination against persons with disabilities as well as successful examples of disability inclusion it shows that when looking Finland from the perspective of persons with disabilities inequality and poverty have been collective experiences of too many of them It will be of interest to all scholars and students of disability studies sociology social policy social work political science health and well being studies and Nordic studies more broadly The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Narratives of Loneliness Olivia Sagan, Eric Miller, 2017-09-28 Rising life expectancies and declining social capital in the developed world mean that an increasing number of people are likely to experience some form of loneliness in their lifetimes than ever before *Narratives of Loneliness* tackles some of the most pressing issues related to loneliness showing that whilst recent policies on social integration community building and volunteering may go some way to giving an illusion of not being alone ultimately they offer a rhetoric of togetherness that may be more seductive than ameliorative as the condition and experience of loneliness is far more complex than commonly perceived Containing thought provoking contributions from researchers and commentators in several countries this important work challenges us to rethink some of the burning issues of our day with specific reference to the causes and consequences of loneliness Topics include the loneliness and mental health of military personnel loneliness and social media loneliness and sexuality urban loneliness and the experiences of transnational movement and adopted children This book therefore makes an overdue multidisciplinary contribution to the emerging debate about how best to deal with loneliness in a world that combines greater and faster connectedness on the one hand with more intensely experienced isolation on the other Since mile Durkheim first claimed that the structure of society could have a strong bearing on psychological health in the 1890s researchers in a range of disciplines have explored the probable impact of social context on mental health and wellbeing Interdisciplinary in approach *Narratives of Loneliness* will therefore be of great interest to academics postgraduate students and researchers in social sciences the arts psychology and psychiatry
